## Oracle Cloud Infrastructure 2025 Observability Professional Sample Questions (Q41-Q46):

### NEW QUESTION # 41

Which response contains rich information to process for analytics?

- A. Entity types
- B. Log Sources
- C. Database Audit Logs
- D. Logging Analytic Entities

**Answer: C**

Explanation:

For analytics, the data source must provide detailed, actionable information.

Database Audit Logs (C): These logs contain rich data like user actions, SQL queries, timestamps, and security events, making them ideal for performance, security, and compliance analysis in Logging Analytics.

Why not A, B, or D?

Entity types (A): These are metadata definitions, not data for analytics.

Log Sources (B): These are configurations for log parsing, not the logs themselves.

Logging Analytic Entities (D): Entities are resource representations, not the data content.

Database Audit Logs offer the depth needed for meaningful insights.

### NEW QUESTION # 42

Which of the following is required to enable Stack Monitoring?

- A. User group for VCN collection
- B. Machine Learning group for resource associations
- C. Dynamic group for discovery service

**Answer: C**

Explanation:

To enable Stack Monitoring:

Dynamic group for discovery service (A): A dynamic group defines resources (e.g., compute instances) that Stack Monitoring can discover and monitor. A policy granting permissions to this group is also required.

Why not B or C?

Machine Learning group (B): Not a valid OCI concept for Stack Monitoring.

User group for VCN collection (C): User groups manage human access, not service discovery.

This setup ensures Stack Monitoring can access and monitor resources.

### NEW QUESTION # 43

Which are the two components that the Management Agent solution includes in the Cloud service? (Choose two.)

- A. Cloud assets
- B. Management Gateway
- C. Management Agent
- D. OCI Logging Analytics

**Answer: B,C**

Explanation:

The Management Agent solution comprises:

Management Gateway (B): A secure proxy that encrypts and forwards data from Management Agents to OCI services.

Management Agent (D): A lightweight process that collects and sends telemetry data from resources.

Why not A or C?

OCI Logging Analytics (A): A consumer of agent data, not a component of the solution.

Cloud assets (C): A vague term, not a specific component.

These components enable secure data collection.

### NEW QUESTION # 44

Which statement is NOT valid about creating an alarm query in Oracle Cloud Infrastructure (OCI) Monitoring?

- A. You must specify a statistic.
- B. You must specify a metric.
- C. You must specify an interval.
- D. You must specify a resource group.

**Answer: D**

Explanation:

Creating an alarm query in OCI Monitoring involves MQL:

Invalid: You must specify a resource group (D): Resource groups (e.g., `groupBy(resourceId)`) are optional for aggregating metrics across streams; alarms can function without them.

Why A, B, and C are valid:

A: A statistic (e.g., `max`, `avg`) is required to process metric data.

B: An interval (e.g., `[1m]`) defines the time window, mandatory for evaluation.

C: A metric (e.g., `CpuUtilization`) is the core of the query.

Resource groups enhance, but aren't required for, alarms.

#### NEW QUESTION # 45

Which pillars of Observability are available as a single view from the Dashboard?

- **A. Logs, Metrics, and Traces**
- B. Logging Analytics, Database Management, Stack Monitoring
- C. Log data, Query language, Dashboard widgets
- D. Compute, Storage, and Network

**Answer: A**
