NEW QUESTION # 26

You want to import data into a DB system with MySQL Shell util.loadDump().

Which option can speed up the load?

- A. showMetadata: false
- B. skipBinlog: true
- C. deferTableIndexes: all
- D. updateGtidSet: off

Answer: C

Explanation:

To speed up the data load into a DB system usingMySQL Shell util.loadDump(), you can use the deferTableIndexes: alloption (Answer D). This option defers the creation of indexes until after the data has been loaded, which can significantly improve the speed of the loading process.

Steps:

* Export your data using MySQL Shell dump utility.

* Useutil.loadDump()to import the data and specify thedeferTableIndexes: alloption.

* The data is loaded without building indexes initially, reducing the time required for the import.

* After the data load is complete, indexes are created in a batch process, which is more efficient than creating them during the data load.

NEW QUESTION # 27

Why would you select "Source cannot use GTID auto-positioning" when creating a channel?

- A. The source gtid mode is OFF.
- B. Some tables have no primary key
- C. The target DB system is a high-availability DB system.
- D. The binary log offset is unknown.

Answer: A

Explanation:

When creating a replication channel and selecting "Source cannot use GTID auto-positioning", it typically indicates that the source's GTID mode is off. GTID (Global Transaction Identifier) auto-positioning allows for automated recovery and positioning of transactions in replication, but it requires that GTID mode be enabled on the source database.

- A. Deleting the DB system
- B. Disabling point-in-time recovery
- C. Enabling point-in-time recovery
- D. Disabling delete protection

Answer: A

Explanation:

When automatic backup retention of a DB system is disabled, deleting the DB system (Answer C) will delete all automatic backups of the DB system.

* Automatic Backups: These are backups created automatically by the OCI service to ensure data protection.

* Backup Deletion: If automatic backups are disabled and you delete the DB system, all associated automatic backups are also deleted. This operation is irreversible, and you should ensure that necessary backups are taken before deleting the DB system.
