

Free PDF Quiz 1z0-915-1 - Accurate Customized Oracle MySQL HeatWave Implementation Associate Rel 1 Lab Simulation

P.S. Free 2025 Oracle 1z0-915-1 dumps are available on Google Drive shared by Actual4dump: <https://drive.google.com/open?id=1v13ZnzHF30QNaXXpaLWqUp2tavcbY2YQ>

In the present situation, you will find companies laying off their employees without any notice or prior information. They are just receiving an email and the next moment they have no access to the company network. So to avoid all this, you have to keep yourself updated with the new version of technologies and applications. You have to become one of Oracle MySQL HeatWave Implementation Associate Rel 1 (1z0-915-1) certification holders who survived the laying off situation and are still in a great position in their company. You cannot afford to lose it when you need your job the most.

With these adjustable Oracle MySQL HeatWave Implementation Associate Rel 1 (1z0-915-1) mock exams, you can focus on weaker concepts that need improvement. This approach identifies your mistakes so you can remove them to master the Oracle MySQL HeatWave Implementation Associate Rel 1 (1z0-915-1) exam questions of Actual4dump give you a comprehensive understanding of 1z0-915-1 Real Exam format. Self-evaluation by taking practice exams makes your Oracle 1z0-915-1 exam preparation flawless and strengthens enough to crack the test in one go.

Oracle 1z0-915-1 Exam | Customized 1z0-915-1 Lab Simulation - Always Available for your Demands

Completing the preparation for the Oracle 1z0-915-1 exam on time is the most important aspect. The other thing is to prepare for the Oracle 1z0-915-1 exam by evaluating your preparation using authentic exam questions. Actual4dump provides the most authentic Oracle 1z0-915-1 Exam Questions compiled according to the rules and patterns supplied by 1z0-915-1.

Oracle 1z0-915-1 Exam Syllabus Topics:

Topic	Details
Topic 1	MySQL HeatWave Configurations: For database administrators and performance tuning specialists, this part of the exam covers creating custom configurations, comparing configurations, describing the effects of changing dynamic and non-dynamic variables, and updating a DB system configuration.
Topic 2	Describe the architecture of the HeatWave cluster, adding a HeatWave cluster to a DB system, and determine whether a query is offloaded to HeatWave cluster for execution.
Topic 3	HeatWave Cluster: For database performance specialists and cloud architects, this section of the exam covers
Topic 4	Backing up and restoring DB systems: For database administrators and disaster recovery specialists, this section of the exam covers backing up and restoring a DB system, managing automatic backups, and performing point-in-time recovery.
Topic 5	Data Migrations: For data migration specialists and database administrators, this part of the exam covers creating a DB system with data import, importing data into a DB system, and exporting data from MySQL servers and DB systems.
Topic 6	Read Replicas: For database architects and replication specialists, this domain of the exam covers creating and managing read replicas, describing the read replica load balancer, connecting to a read replica, etc.
Topic 7	Provisioning and Connecting DB systems: For system administrators and database engineers, this part of the exam covers identifying VCN requirements for provisioning DB systems, connecting to DB systems with OCI Bastion, connecting to DB systems with MySQL Shell, connecting to DB systems with OCI Cloud Shell, connect to DB system with OCI SQL Worksheet, and authenticate DB system with OCI Identify Access Management credentials.
Topic 8	Inbound Replication: For database administrators and replication experts, this section of the exam covers setting up and troubleshoot inbound replication and creating channels.

Oracle MySQL HeatWave Implementation Associate Rel 1 Sample Questions (Q17-Q22):

NEW QUESTION # 17

You create a MySQL DB system with default port numbers, and attach it to a subnet.

Which configuration is required on the subnet to enable client applications to connect to the DB system?

- A. Create an ingress rule that allows stateless connections on port 3306 and 33060.
- B. Create an egress rule that allows stateless connections on port 3306 and 33060.
- C. Create an egress rule that allows stateful connections on port 3306 and 33060.
- **D. Create an ingress rule that allows stateful connections on port 3306 and 33060.**

Answer: D

Explanation:

To enable client applications to connect to a MySQL DB system that uses default port numbers and is attached to a subnet, you need to create an ingress rule that allows stateful connections on port 3306 and 33060 (Answer C).

* Ingress Rule: An ingress rule specifies the types of inbound connections that are allowed to a resource within a subnet.

* Stateful Connections: Stateful connections keep track of the state of network connections passing through them, allowing return traffic to pass automatically.

Steps:

* Navigate to the Virtual Cloud Network (VCN) in the OCI Console.

* Open the subnet to which the MySQL DB system is attached.

* Add an ingress rule to the subnet's security list to allow traffic on port 3306 (MySQL) and 33060 (MySQL X Protocol).

* Ensure the rule is stateful to maintain the connection state.

* OCI Networking Documentation

NEW QUESTION # 18

You want to restore the backup of a stand-alone DB system to a new DB system.
Which two changes are allowed? (Choose two.)

- A. Use a different subnet for the new DB system.
- B. Use a different shape for the new DB system.
- C. Use a different region for the new DB system.
- D. Use a smaller data storage size for the new DB system.
- E. Use a different tenancy for the new DB system.

Answer: A,B

Explanation:

When restoring the backup of a stand-alone DB system to a new DB system, the following changes are allowed:

* Use a different subnet for the new DB system(Answer B): You can select a different subnet within the same VCN or a different VCN for the new DB system, providing flexibility in network configuration.

* Use a different shape for the new DB system(Answer C): You can choose a different compute shape for the new DB system, allowing you to scale the compute resources according to the requirements.

NEW QUESTION # 19

You want to connect to a DB system with MySQL Shell.

DB system endpoint IP address: 10.0.1.221

Username: admin

Password: MySQL8.0

Which two commands work? (Choose two.)

- A. `mysqlsh mysql://MySQL8.0:admin@10.0.1.221`
- B. `mysqlsh -host 10.0.1.221 -user admin -password MySQL8.0`
- C. `mysqlsh mysql://admin:MySQL8.0@10.0.1.221`
- D. `mysqlsh -h 10.0.1.221 -u admin -p MySQL8.0`
- E. `mysqlsh -h10.0.1.221 -uadmin -pMySQL8.0`

Answer: C,E

Explanation:

To connect to a MySQL DB system using MySQL Shell, you can use several command-line formats. Here, we will analyze the provided options:

A.`mysqlsh -h 10.0.1.221 -u admin -p MySQL8.0`

* Incorrect format. The password should not be directly placed after the -pflag without a space or equals sign.

B.`mysqlsh mysql://MySQL8.0:admin@10.0.1.221`

* Incorrect format. The username should come before the password in the URL.

C.`mysqlsh mysql://admin:MySQL8.0@10.0.1.221`

* Correct format. This is a valid way to connect using a URL-like format whereadminis the username,MySQL8.0is the password, and10.0.1.221is the host.

D.`mysqlsh -h10.0.1.221 -uadmin -pMySQL8.0`

* Correct format. This is a valid way to connect using flags, with no spaces between the flags and their values.

E.`mysqlsh -host 10.0.1.221 -user admin -password MySQL8.0`

* Incorrect format. MySQL Shell uses-h,-u, and-pfor specifying host, username, and password respectively.

NEW QUESTION # 20

Automatic backup retention of a DB system is disabled. Which operation deletes all automatic backups of the DB system?

- A. Disabling delete protection

- B. Deleting the DB system
- C. Enabling point-in-time recovery
- D. Disabling point-in-time recovery

Answer: B

Explanation:

When automatic backup retention of a DB system is disabled, deleting the DB system (Answer C) will delete all automatic backups of the DB system.

* Automatic Backups: These are backups created automatically by the OCI service to ensure data protection.

* Backup Deletion: If automatic backups are disabled and you delete the DB system, all associated automatic backups are also deleted. This operation is irreversible, and you should ensure that necessary backups are taken before deleting the DB system.

NEW QUESTION # 21

Which three must be provided when creating a channel? (Choose three.)

- A. Target DB system
- B. Source connection password
- C. Source connection SSL mode
- D. Replication delay
- E. Channel name

Answer: B,C,E

Explanation:

When creating a channel for replication in MySQL, the following must be provided:

* Channel name (Answer A): The unique identifier for the replication channel.

* Source connection SSL mode (Answer B): Specifies the SSL mode for the connection to the source server.

* Source connection password (Answer D): The password for the source server connection.

Steps:

* Use CHANGE MASTER TO command to set up the replication channel.

* Provide the channel name, SSL mode, and connection password as part of the configuration.

References:

* MySQL Replication Documentation

* Setting Up Replication Channels

NEW QUESTION # 22

.....

Thanks to modern technology, learning online gives people access to a wider range of knowledge, and people have got used to convenience of electronic equipment. As you can see, we are selling our 1z0-915-1 learning guide in the international market, thus there are three different versions of our 1z0-915-1 exam materials: PDF, Soft and APP versions. It is worth mentioning that, the simulation test of our 1z0-915-1 Study Guide is available in our software version. With the simulation test, all of our customers will get accustomed to the 1z0-915-1 exam easily, and pass the exam with confidence.
