Your exam preparation with ACD201 Questions is our top priority at DumpsValid. To do this they just enroll in Appian Senior Developer (ACD201) certification exam and show some firm commitment and dedication and prepare well to crack the ACD201 exam.

Appian Senior Developer Sample Questions (Q23-Q28):

NEW QUESTION # 23

You're developing a functionality to manage transactions for an insurance company. Each transaction can have multiple items where respective item type and item amount can be entered. The amount entered can be either negative or positive, and is a decimal data type with a precision of 8 and a scale of 2.

A maximum of 10 items can be entered for a transaction. Once all the items are entered, you need to calculate and show the sum of all items' total amounts at the transaction level.

What is the best way to calculate and display the sum of all item amounts?

- A. `fixed(sum(ri!items.amount),2,false())`
- B. `round(sum(ri!items.amount),2)`
- C. `text(sum(ri!items.amount),'00.00')`

Answer: A

Explanation:

`fixed(sum(ri!items.amount),2,false())` is the best option because it returns the sum as a text value formatted to exactly two decimal places, which is ideal for currency or financial amounts. This ensures the total displays correctly as a string, maintaining precision and formatting for both positive and negative values.

NEW QUESTION # 24

Your client wants their customers to be able to schedule appointments directly from their website without going to an Appian user environment.

You need to build an embedded interface to be added to your client's web page. The style of the embedded interface should be consistent with the host web page.

Which three custom styling options can be configured in the Themes section of embedded interfaces?

(Choose three.)

- A. Asymmetrical layout
- B. Page background color
- C. Web font stylesheet URL
- D. Two or three column layout
- E. Font Family

Answer: B,C,E

Explanation:

Page background color - You can customize the background color to match the host webpage's theme.

Font family - You can set the font family to ensure the embedded interface aligns with the client's branding.

Web font stylesheet URL - This allows the use of custom web fonts, further aligning the style with the host site.

NEW QUESTION # 25

You're designing an expression rule that needs to retrieve employees from a database for a given department and display their full name concatenated with their role in a list for a dropdown field.

Which design approach should you recommend?

- A. Query the data with a filter applied to only return employees for the given department. Using `a!forEach()`, for each item in the list, return the employee name and role.
- B. Query the data to return all employees. Using `a!forEach()`, for each item in the list, if the employee belongs to the given department, return the employee name and role, otherwise, return a null value.
- C. Query the data to return all employees. Use `wherecontains()` to return the employees for the given department and use `a!forEach()` to return the employee name and role for each item in the list.

Answer: A

Explanation:

Querying the data with a filter to return only employees for the given department is the most efficient approach. Then, using `a!forEach()` to concatenate and return the employee name and role meets the dropdown display requirement without unnecessary processing.

NEW QUESTION # 26

You're conducting a code review and notice that some accessibility features are missing on the interfaces. Which two UX best practices should be followed to align with accessibility requirements? (Choose two.)

- A. Indicate the hierarchy of sections with a heading tag in addition to label sizes (for example: "H1").
- B. Use rich text items to act as headers for structuring interfaces.
- C. Apply a label value for all fields when the label position is "Hidden".
- D. Use a single rich text icon with "POSITIVE" or "NEGATIVE" styling to indicate statuses.

Answer: A,C

Explanation:

Applying a label value for all fields, even when the label position is hidden, ensures screen readers and assistive technologies can interpret the field correctly.

Indicating the hierarchy of sections with heading tags improves navigation for users with assistive technologies, aligning with accessibility standards.

NEW QUESTION # 27

You're building an order management system.

You need to create a field that displays the total number of days it took to deliver each order, and show and sort by this data in a read-only grid. The data must be available in real-time.

Which function is the most appropriate for calculating this value?

- A. `a!subtractDateTime()`
- B. `a!customFieldDateDiff()`
- C. `calworkdays()`

Answer: B

Explanation:

`a!customFieldDateDiff()` is specifically designed for calculating date differences as custom record fields, enabling sorting and real-time calculation in read-only grids.

NEW QUESTION # 28

.....

If you free download the demos of our ACD201 study guide to have a try, then you will find that rather than solely theory-oriented, our ACD201 actual exam provides practice atmosphere when you download them, you can practice every day just like answering on the real ACD201 Practice Exam.
