

Free PDF Quiz 2025 Authoritative NGFW-Engineer: Palo Alto Networks Next-Generation Firewall Engineer Valid Exam Braindumps

Your Guide to the Palo Alto Networks Next-Generation Firewall Engineer Certification: Skills, Scope, and Success

P.S. Free 2025 Palo Alto Networks NGFW-Engineer dumps are available on Google Drive shared by ExamsLabs:
https://drive.google.com/open?id=1kshHIVfmSBcTos3nw6oAKQNuXgl_LxD9

We provide 3 versions of our NGFW-Engineer exam torrent and they include PDF version, PC version, APP online version. Each version's functions and using method are different and you can choose the most convenient version which is suitable for your practical situation. For example, the PDF version is convenient for you to download and print our NGFW-Engineer Test Torrent and is suitable for browsing learning. If you use the PDF version you can print our NGFW-Engineer guide torrent on the papers. The PC version of our NGFW-Engineer exam questions can stimulate the real exam's environment.

Palo Alto Networks NGFW-Engineer Exam Syllabus Topics:

Topic	Details
Topic 1	• PAN-OS Networking Configuration: This section of the exam measures the skills of Network Engineers in configuring networking components within PAN-OS. It covers interface setup across Layer 2, Layer 3, virtual wire, tunnel interfaces, and aggregate Ethernet configurations. Additionally, it includes zone creation, high availability configurations (active • active and active • passive), routing protocols, and GlobalProtect setup for portals, gateways, authentication, and tunneling. The section also addresses IPsec, quantum-resistant cryptography, and GRE tunnels.
Topic 2	• Integration and Automation: This section measures the skills of Automation Engineers in deploying and managing Palo Alto Networks NGFWs across various environments. It includes the installation of PA-Series, VM-Series, CN-Series, and Cloud NGFWs. The use of APIs for automation, integration with third-party services like Kubernetes and Terraform, centralized management with Panorama templates and device groups, as well as building custom dashboards and reports in Application Command Center (ACC) are key topics.
Topic 3	• PAN-OS Device Setting Configuration: This section evaluates the expertise of System Administrators in configuring device settings on PAN-OS. It includes implementing authentication roles and profiles, and configuring virtual systems with interfaces, zones, routers, and inter-VSYS security. Logging mechanisms such as Strata Logging Service and log forwarding are covered alongside software updates and certificate management for PKI integration and decryption. The section also focuses on configuring Cloud Identity Engine User-ID features and web proxy settings.

NGFW-Engineer Learning Materials & NGFW-Engineer Test Simulate & NGFW-Engineer Best Questions

The more you can clear your doubts, the more easily you can pass the Palo Alto Networks Next-Generation Firewall Engineer (NGFW-Engineer) exam. ExamsLabs NGFW-Engineer practice test works amazingly to help you understand the NGFW-Engineer exam pattern and how you can attempt the real Palo Alto Networks Exam Questions. It is just like the final NGFW-Engineer exam pattern and you can change its settings. When you take ExamsLabs Palo Alto Networks NGFW-Engineer Practice Exams, you can know whether you are ready for the finals or not. It shows you the real picture of your hard work and how easy it will be to clear the NGFW-Engineer exam if you are ready for it.

Palo Alto Networks Next-Generation Firewall Engineer Sample Questions (Q45-Q50):

NEW QUESTION # 45

Which statement applies to the relationship between Panorama-pushed Security policy and local firewall Security policy?

- A. When a policy match is found in a local firewall policy, if any Panorama shared post-rule is configured, it will still be evaluated.
- B. The order of policy evaluation can be configured differently in different device groups.
- C. Local firewall rules are evaluated after Panorama pre-rules and before Panorama post-rules.
- D. Panorama post-rules can be configured to be evaluated before local firewall policy for the purpose of troubleshooting.

Answer: C

Explanation:

Local firewall rules are evaluated after Panorama pre-rules (those applied before the firewall's local policies) and before Panorama post-rules (those applied after the firewall's local policies). This ensures that the local firewall rules do not override the central Panorama policy and are only applied in the appropriate order within the policy evaluation sequence.

NEW QUESTION # 46

In a hybrid cloud deployment, what is the primary function of Ansible in managing Palo Alto Networks NGFWs?

- A. It enables centralized log collection and correlation for NGFWs.
- B. It facilitates dynamic updates to NGFW threat databases.
- C. It provides a web interface for managing NGFW hardware clusters.
- D. It automates NGFW policy updates and configurations through playbooks.

Answer: D

Explanation:

In a hybrid cloud deployment, Ansible is primarily used for automating configurations and policy updates on Palo Alto Networks Next-Generation Firewalls (NGFWs). Through the use of playbooks, Ansible can automate the process of deploying security policies, updating configurations, and managing the firewall's state, which enhances efficiency and consistency across multiple NGFWs in a large or hybrid cloud environment.

NEW QUESTION # 47

In regard to the Advanced Routing Engine (ARE), what must be enabled first when configuring a logical router on a PAN-OS firewall?

- A. License
- B. Plugin
- C. General setting
- D. Content update

Answer: A

Explanation:

To enable the Advanced Routing Engine (ARE) on a Palo Alto Networks firewall, the license for the ARE must be applied first. Without the proper license, the firewall cannot activate and use the advanced routing features provided by ARE, such as support for more complex routing protocols (e.g., BGP, OSPF, etc.).

Once the license is applied and validated, the routing engine can be configured, allowing the creation of logical routers and routing policies.

NEW QUESTION # 48

Which PAN-OS method of mapping users to IP addresses is the most reliable?

- **A. Server monitoring**
- B. Port mapping
- C. GlobalProtect
- D. Syslog

Answer: A

Explanation:

Server monitoring is the most reliable method for mapping users to IP addresses in PAN-OS. This method allows the firewall to monitor specific servers, such as Microsoft Active Directory (AD) or LDAP servers, to dynamically retrieve and update user-to-IP mappings. It provides a more accurate and up-to-date mapping of users to their associated IP addresses, as it directly queries user databases in real time.

NEW QUESTION # 49

By default, which type of traffic is configured by service route configuration to use the management interface?

- A. Virtual system (VSYS)
- **B. Autonomous Digital Experience Manager (ADEM)**
- C. IPSec tunnel
- D. Security zone

Answer: B

Explanation:

By default, the Autonomous Digital Experience Manager (ADEM) traffic is configured to use the management interface in a Palo Alto Networks firewall. The management interface is typically used for management-related traffic, such as monitoring and logging, and it is configured to handle ADEM-related traffic for the optimal performance of digital experience monitoring features. This default configuration helps ensure that ADEM traffic does not interfere with regular traffic that may traverse other interfaces, such as traffic from security zones or IPSec tunnels.

NEW QUESTION # 50

.....

NGFW-Engineer Exam Materials still keep an affordable price for all of our customers and never want to take advantage of our famous brand. NGFW-Engineer Test Braindumps can even let you get a discount in some important festivals. Compiled by our company, NGFW-Engineer Exam Materials is the top-notch exam torrent for you to prepare for the exam. I strongly believe that under the guidance of our NGFW-Engineer test torrent, you will be able to keep out of troubles way and take everything in your stride.
