

Free PDF Quiz 2025 CompTIA CV0-004: CompTIA Cloud+ (2024)–Efficient Interactive Practice Exam

DOWNLOAD the newest GetValidTest CV0-004 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=14QXY5FmgPP4sknzUhn0hoHGKTZ4qwKWb>

The CompTIA Cloud+ (2024) (CV0-004) web-based practice test works on all major browsers such as Safari, Chrome, MS Edge, Opera, IE, and Firefox. Users do not have to install any excessive software because this CompTIA Cloud+ (2024) (CV0-004) practice test is web-based. It can be accessed through any operating system like Windows, Linux, iOS, Android, or Mac. Another format of the practice test is the desktop software. It works offline only on Windows. Our CompTIA Cloud+ (2024) (CV0-004) desktop-based practice exam software comes with all specifications of the web-based version.

We know that you have strong desire for success in your career, now, we recommend you to get the CV0-004 exam certification. GetValidTest will help you and provide you with the high quality CompTIA training material. CV0-004 questions are selected and edited from the original questions pool and verified by the professional experts. Besides, the updated of CV0-004 PdfTorrent is checked every day by our experts and the new information can be added into the CV0-004 exam dumps immediately.

HOT CV0-004 Interactive Practice Exam - Latest CompTIA CV0-004 Latest Test Preparation: CompTIA Cloud+ (2024)

In today's competitive CompTIA industry, only the brightest and most qualified candidates are hired for high-paying positions. Obtaining CV0-004 certification is a wonderful approach to be successful because it can draw in prospects and convince companies that you are the finest in your field. Pass the CompTIA Cloud+ (2024) to establish your expertise in your field and receive certification. However, passing the CompTIA Cloud+ (2024) CV0-004 Exam is challenging.

CompTIA Cloud+ (2024) Sample Questions (Q15-Q20):

NEW QUESTION # 15

A cloud engineer is troubleshooting a connectivity issue. The application server with IP 192.168.1.10 in one subnet is not connecting to the MySQL database server with IP 192.168.2.20 in a different subnet. The cloud engineer reviews the following information:

Application Server Stateful Firewall

Inbound rules	Outbound rules
PERMIT ANY 443	PERMIT ANY 443
DENY ANY ANY	PERMIT ANY 3306
	PERMIT ANY 53
	DENY ANY ANY

Application Server Subnet Routing Table	
Destination	Gateway
192.168.1.0/24	192.168.1.1
192.168.2.0/24	local

MySQL Server Stateful Firewall	
Inbound rules	Outbound rules
PERMIT 192.168.1.10/32 3306	DENY ANY ANY
DENY ANY ANY	

MySQL Server Subnet Routing Table	
Destination	Gateway
192.168.2.0/24	192.168.1.1
192.168.1.0/24	local

Which of the following should the cloud engineer address to fix the communication issue?

- A. The MySQL Server Stateful Firewall
- B. The Application Server Stateful Firewall
- C. The MySQL Server Subnet Routing Table
- D. The Application Server Subnet Routing Table

Answer: A

Explanation:

The connectivity issue between the application server and the MySQL database server in different subnets is likely due to the MySQL Server Stateful Firewall's inbound rules. The application server has an IP of 192.168.1.10, but the MySQL server's inbound rules only permit IP 192.168.1.10/32 on port 3306. This rule allows only a single IP address (192.168.1.10) to communicate on port 3306, which is typical for MySQL. However, if the application server's IP is not 192.168.1.10 or the application is trying to communicate on a different port, it would be blocked. To fix the communication issue, the cloud engineer should address the inbound rules on the MySQL Server Stateful Firewall to ensure that the application server's IP address and the required port are allowed. Reference: Based on the information provided in the question and general networking principles.

NEW QUESTION # 16

A company has ten cloud engineers working on different manual following is the best method to address this issue?

- A. Configuration as code
- B. Service logging
- C. Change ticketing
- D. Deployment documentation

Answer: A

Explanation:

Configuration as code is the best method to address the issue of cloud engineers working on different manual configurations. This practice allows configurations to be scripted and automated, which reduces human error, enhances consistency, and makes the deployment process more efficient and reproducible.

NEW QUESTION # 17

A developer is deploying a new version of a containerized application. The DevOps team wants:

- No disruption
- No performance degradation
- Cost-effective deployment
- Minimal deployment time

Which of the following is the best deployment strategy given the requirements?

- A. Rolling
- B. Canary
- C. Blue-green
- D. In-place

Answer: C

Explanation:

The blue-green deployment strategy is the best given the requirements for no disruption, no performance degradation, cost-effective deployment, and minimal deployment time. It involves maintaining two identical production environments (blue and green), where one hosts the current application version and the other is used to deploy the new version. Once testing on the green environment is complete, traffic is switched from blue to green, ensuring a seamless transition with no downtime.

NEW QUESTION # 18

Which of the following service options would provide the best availability for critical applications in the event of a disaster?

- A. Edge computing
- B. Cloud bursting
- C. Availability zones
- D. Multicloud tenancy

Answer: C

Explanation:

Availability zones provide the best availability for critical applications in the event of a disaster. They are distinct locations within a cloud region that are engineered to be isolated from failures in other availability zones, thus providing redundancy and failover capabilities, which is essential for maintaining high availability of critical applications.

Reference: The concept of availability zones and their importance in disaster recovery and high availability is covered under the domain of Management and Technical Operations in the CompTIA Cloud+ objectives.

NEW QUESTION # 19

An administrator received a report that company data has been compromised. The compromise occurred on a holiday, and no one in the organization was working. While reviewing the logs from the holiday, the administrator noted the following details:

Account	Access	Details
Cloud administrator	Granted	Log-in granted
Software developer	Granted	Log-in granted
Software developer	Denied	Denied access to human resources folder
Security engineer	Granted	Log-in granted
Security engineer	Denied	Denied access to personnel files
Human resources manager	Granted	Log-in granted
Human resources manager	Granted	Access granted to human resources folder

The most appropriate action for the cloud security analyst to recommend is using CIS-hardened images. These images are pre-configured by the Center for Internet Security to provide security benchmark standards that help in mitigating vulnerabilities in publicly available container images. References: CompTIA Cloud+ Study Guide (Exam CV0-004) - Chapter on Cloud Security Posture Which of the following accounts should the administrator disable to prevent a further breach?

- A. Cloud administrator
- B. Security engineer
- C. Software developer
- D. Human resources manager

Answer: C

Explanation:

Based on the provided log details, the account of the Software Developer was used to gain unauthorized access. This account should be disabled to prevent further breaches, especially considering no one from the organization was working during the holiday, suggesting a compromised account.
