

Free PDF Quiz 2025 CompTIA Reliable CLO-002 Reliable Practice Materials

2025 Latest PremiumVCEDump CLO-002 PDF Dumps and CLO-002 Exam Engine Free Share: <https://drive.google.com/open?id=1wjSPOox2gIYKZhj1xVhgWtEdwaRJ2Tfu>

The CompTIA CLO-002 exam questions are designed and verified by experienced and qualified CompTIA CLO-002 exam trainers. They work together and share their expertise to maintain the top standard of CompTIA CLO-002 Exam Practice test. So you can get trust on CompTIA CLO-002 exam questions and start preparing today.

CompTIA CLO-002 (CompTIA Cloud Essentials+ Certification) Certification Exam is an excellent certification for professionals who want to prove their knowledge and skills in cloud computing. This vendor-neutral certification covers a wide range of topics, making it an ideal entry-level certification for professionals new to cloud computing. With the increasing demand for cloud computing skills, this certification can help professionals stand out in the job market and advance their careers.

Take CLO-002 Practice Exam Questions (Desktop & Web-Based)

With the rapid development of society, people pay more and more attention to knowledge and skills. So every year a large number of people take CLO-002 tests to prove their abilities. But even the best people fail sometimes. In addition to the lack of effort, you may also not make the right choice on our CLO-002 Exam Questions. A good choice can make one work twice the result with half the effort, and our CLO-002 study materials will be your right choice.

CompTIA CLO-002 Exam is a valuable certification for IT professionals who are looking to advance their careers in cloud computing. CompTIA Cloud Essentials+ Certification Exam certification demonstrates that the candidate has a solid understanding of cloud computing concepts and is able to evaluate and implement cloud solutions. IT professionals who hold the CompTIA CLO-002 Certification are highly sought-after by employers, as they have the knowledge and skills to lead cloud computing projects and drive business value through cloud solutions.

CompTIA Cloud Essentials+ Certification Exam Sample Questions (Q189-Q194):

NEW QUESTION # 189

Which of the following would represent a successful implementation of a cloud service strategy?

- A. An organization has managed budgeting and accounting for cloud services needed for the organization.
- B. An organization has managed the investment portfolio for services available to users of the cloud services.

- C. An organization has identified services, investments, partners, and delivery channels designed to meet requirements.
- D. An organization has identified patterns of business activities that use services and manage activities to influence demand.

Answer: C

NEW QUESTION # 190

Which of the following is a cloud service model that organizations use when their third-party ERP tool is provided as a complete service?

- A. Hybrid cloud
- B. Public cloud
- C. SaaS
- D. IaaS

Answer: C

Explanation:

SaaS, or software as a service, is a cloud service model that provides ready-to-use, cloud-hosted application software to customers. Customers do not need to install, manage, or maintain the software; they simply access it via an internet connection, usually through a web browser. SaaS applications are typically offered on a subscription or pay-per-use basis. Examples of SaaS applications include email, CRM, ERP, office productivity, and collaboration tools¹².

SaaS is different from the other cloud service models in terms of the level of abstraction and control. In SaaS, the cloud service provider manages everything from the underlying infrastructure to the application software, while the customer only controls the application settings and data. In contrast, in IaaS (infrastructure as a service), the customer has more control and responsibility over the servers, storage, networking, and operating systems, while the cloud service provider only manages the physical infrastructure. In PaaS (platform as a service), the customer has control and responsibility over the applications and data, while the cloud service provider manages the underlying infrastructure and the development tools and platforms¹².

Therefore, when an organization uses a third-party ERP tool as a complete service, it is using the SaaS cloud service model. The organization does not need to worry about the installation, configuration, or maintenance of the ERP software; it only needs to access it via the internet and pay for the usage. The cloud service provider takes care of the rest.

NEW QUESTION # 191

An organization has just gone to a start-up cloud provider for its entire infrastructure. Which of the following is one of the new organizational roles required at the cloud provider?

- A. Supply manager
- B. Commercial manager
- C. Infrastructure project manager
- D. Credit risk manager

Answer: C

NEW QUESTION # 192

How does using cloud computing help to enhance business value?

- A. By using cloud computing, businesses are able to lower server utilization.
- B. By using cloud computing, businesses are able to realize lower asset utilization for personnel.
- C. By paying for actual usage, cloud computing allows businesses to convert variable costs into fixed costs.
- D. By paying for actual usage, cloud computing allows businesses to convert fixed costs into variable costs.

Answer: D

NEW QUESTION # 193

A business analyst is comparing used vs. allocated storage cost for each reserved instance on a financial expenditures report related

to the cloud. The CSP is currently billing at the following rates for storage:
 \$1.50 per GB of used space
 \$0.75 per GB of allocated space
 The operating expenditures the analyst is reviewing are as follows:

Server name	Used space	Allocated space
Application server	18GB	100GB
Mail server	55GB	80GB
File server	70GB	90GB

Given this scenario, which of the following servers is costing the firm the least, and which should have storage increased due to over 70% utilization?

- A. Least: Application server Optimize: File server
- B. Least: Application server Optimize: Mail server
- C. Least: File server Optimize: Application server
- D. Least: Mail server Optimize: File server

Answer: A

Explanation:

The least costing server is the application server because it has the lowest used space and allocated space. The file server should have storage increased due to over 70% utilization because it has the highest used space and allocated space. To calculate the cost of each server, we can use the following formula:

Cost = (\$1.50 x Used space) + (\$0.75 x Allocated space)

Using this formula, we can find the cost of each server as follows:

Application server: Cost = (\$1.50 x 186 GB) + (\$0.75 x 250 GB) = \$279 + \$187.50 = \$466.50
 Mail server: Cost = (\$1.50 x 250 GB) + (\$0.75 x 300 GB) = \$375 + \$225 = \$600
 File server: Cost = (\$1.50 x 450 GB) + (\$0.75 x 500 GB) = \$675 + \$375 = \$1050
 The application server has the lowest cost of \$466.50, while the file server has the highest cost of \$1050. To find the utilization percentage of each server, we can use the following formula:

Utilization = (Used space / Allocated space) x 100%

Using this formula, we can find the utilization percentage of each server as follows:

Application server: Utilization = (186 GB / 250 GB) x 100% = 74.4%

Mail server: Utilization = (250 GB / 300 GB) x 100% = 83.3%

File server: Utilization = (450 GB / 500 GB) x 100% = 90%

The file server has the highest utilization percentage of 90%, which means that it is running out of storage space and may affect its performance and availability. The application server has the lowest utilization percentage of 74.4%, which means that it has some unused storage space and may be overprovisioned. Therefore, the file server should have storage increased to reduce its utilization and improve its efficiency, while the application server is costing the firm the least and does not need any changes in its storage allocation.
