

Free PDF Quiz 2025 CWAP-404: Accurate 100% Certified Wireless Analysis Professional Accuracy

P.S. Free 2025 CWNP CWAP-404 dumps are available on Google Drive shared by DumpTorrent: <https://drive.google.com/open?id=1WyCnuXZ5nr60IfiOgGHW7xCD4ORACrN3>

Our CWAP-404 real exam has three packages, which meets your different demands. They are PDF version, online test engine and windows software of the CWAP-404 learning guide. The contents are all identical. But the displays are totally different and you may choose the right one according to your interest and hobbies. Every version of our CWAP-404 Real Exam is worthy and affordable for you to purchase. Let us fight for our bright future. You are bound to win if you are persistent.

CWNP CWAP-404 Exam Syllabus Topics:

Topic	Details
Topic 1	• MAC Sublayer and Functions: The topic measures the ability of a wireless network professional to understand and analyze the MAC layer operations. Candidates are expected to validate BSS configurations and identify issues like CRC errors and retransmissions, ensuring they can maintain the integrity and performance of the WLAN.
Topic 2	• Protocol Analysis: The topic in the CWNP CWAP-404 exam evaluates the skill of a wireless network professional to capture and analyze 802.11 frames effectively. Candidates must demonstrate proficiency in configuring protocol analysis tools, interpreting frame captures to diagnose issues, and applying appropriate troubleshooting methods.
Topic 3	• Frame Exchanges: The topic evaluates the skills of a wireless network professional in capturing, understanding, and analyzing various frame exchanges, including BSS discovery, joining, roaming, and data frames. The CWAP-404 Exam targets the ability of candidates to troubleshoot and resolve issues related to MAC layer operations, ensuring they can maintain robust and efficient WLAN communications.

Topic 4	PHY Layers and Technologies: In the topic, the CWAP-404 exam tests the understanding of a wireless network professional about the Physical (PHY) layer functions and technologies. Wireless analysts need to describe and apply knowledge of PHY headers, PPDU's, and other PHY-related data. This topic ensures that analysts are proficient in interpreting PHY information within protocol analyzers and can select appropriate capture devices for different PHY types.

CWNP CWAP-404 Exam Certification Details:

Exam Code	CWAP-404 CWAP
Exam Registration	PEARSON VUE
Exam Name	Wireless Analysis Professional
Passing Score	70%

>> 100% CWAP-404 Accuracy <<

Real CWNP CWAP-404 Dumps Attempt the Exam in the Optimal Way

Whether you are at home or out of home, you can study our CWAP-404 test torrent. You don't have to worry about time since you have other things to do, because under the guidance of our CWAP-404 study tool, you only need about 20 to 30 hours to prepare for the exam. You can use our CWAP-404 exam materials to study independently. You don't need to spend much time on it every day and will pass the exam and eventually get your certificate. CWAP-404 Certification can be an important tag for your job interview and you will have more competitiveness advantages than others.

CWNP Certified Wireless Analysis Professional Sample Questions (Q156-Q161):

NEW QUESTION # 156

An RST frame should be acknowledged by which frame?

- **A. CTS**
- B. Block Ack
- C. Ack
- D. RTS-Ack

Answer: A

Explanation:

An RTS (Request to Send) frame should be acknowledged by a CTS (Clear to Send) frame. An RTS and CTS frame are types of control frames that are used to implement a virtual carrier sense mechanism called RTS/CTS. RTS/CTS is a technique that helps to avoid collisions and hidden node problems in wireless transmissions. When a STA (station) wants to send a data frame, it first sends an RTS frame to the intended receiver, indicating the duration of the transmission. The receiver then responds with a CTS frame, also indicating the duration of the transmission. The other STAs in the vicinity hear either the RTS or the CTS frame and update their NAV (Network Allocation Vector) timers accordingly, deferring their access to the medium until the transmission is over. The sender then sends the data frame, followed by an ACK (Acknowledgement) frame from the receiver. The other options are not correct, as they are not used to acknowledge an RTS frame. An ACK frame is used to acknowledge a data frame, not an RTS frame. An RTS-Ack frame does not exist, as there is no such type of control frame in 802.11. A Block Ack (BA) frame is used to acknowledge multiple data frames in a single frame, not an RTS frame.

NEW QUESTION # 157

Given the IEEE 802.11 Beacon frame decode shown, determine which statement is definitively true.

- A. This Beacon frame came from an ERP or HT access point.
- B. The SSID value in this Beacon is null.
- C. ERP mobile stations must use the RTS/CTS protocol before Data transmissions.
- D. The access point has both 1 Mbps and 2 Mbps configured as basic rates.
- E. The access point is operating on channel 3.

Answer: A

NEW QUESTION # 158

VoIP is used heavily in your organization.

You must troubleshoot problems with dropped calls on the WLAN.

What is a common cause of dropped calls when using Wi-Fi VoIP phones?

- A. Use of WMM
- B. Data rates below 54 Mbps
- C. Data rates below 75 Mbps
- D. Slow roaming

Answer: D

NEW QUESTION # 159

Using a portable analyzer you perform a packet capture next to a client STA and you can see that the STA is associated to a BSS.

You observe the STA sending packets to the AP and the AP sending packets to the STA.

Less than 2% of all packets are retransmissions. You move to capture packets by the AP and, while the retry rate is still less than 2%, you now only see unidirectional traffic from the AP to the client. How do you explain this behavior?

- A. There is a transmit power mismatch between the client and the AP and while the client can hear the AP's traffic, the AP cannot hear the client

- B. The portable analyzer has a lower receive sensitivity than the AP and while it can't capture the packets from the client STA, the AP can receive them OK
- C. The portable analyzer is too close to the AP causing CCI, blinding the AP to the clients packets
- D. The STA is transmitting data using more spatial streams than the portable analyzer can support

Answer: B

Explanation:

Explanation

Receive sensitivity is the minimum signal level that a receiver can detect and decode. Different devices may have different receive sensitivity levels depending on their hardware specifications and antenna configurations.

In this scenario, the portable analyzer has a lower receive sensitivity than the AP, meaning that it requires a stronger signal to capture the packets from the client STA. The AP, on the other hand, has a higher receive sensitivity and can receive the packets from the client STA even if they have a weaker signal. This explains why the portable analyzer can only see unidirectional traffic from the AP to the client when capturing near the AP.

NEW QUESTION # 160

What two IEEE 802.11 entities may be used to separate successful transmissions within an EDCA TXOP? (Choose 2)

- A. EIFS
- B. RIFS
- C. CAP
- D. PIFS
- E. SIFS
- F. ACK
- G. AIFS

Answer: B,E

NEW QUESTION # 161

When you buy things online, you must ensure the security of online purchasing, otherwise your rights will be harmed. Our CWAP-404 study tool purchase channel is safe, we invite experts to design a secure purchasing process for our CWAP-404 qualification test, and the performance of purchasing safety has been certified, so personal information of our clients will be fully protected. We provide you with global after-sales service. If you have any questions that need to be consulted, you can contact our staff at any time to help you solve problems related to our CWAP-404 qualification test. Our thoughtful service is also part of your choice of buying our learning materials. Once you choose to purchase our CWAP-404 test guides, you will enjoy service.
