2025 Salesforce Development-Lifecycle-and-Deployment-Architect: Salesforce Certified Development Lifecycle and Deployment Architect Accurate Exam Simulator Fee

Under the help of our Development-Lifecycle-and-Deployment-Architect exam questions, the pass rate among our customers has reached as high as 98% to 100%. We are look forward to become your learning partner in the near future. As we all know, to make

something right, the most important thing is that you have to find the right tool. Our Development-Lifecycle-and-Deployment-Architect study quiz is the exact study tool to help you pass the Development-Lifecycle-and-Deployment-Architect exam by your first attempt.

Salesforce Certified Development Lifecycle and Deployment Architect Sample Questions (Q124-Q129):

NEW QUESTION # 124

What is the process used to initiate a connection for change sets?

- A. Modify the target org to accept an inbound connection from the source org
- B. Modify the source org to allow an outbound connection to the target org
- C. Modify the source org to allow an inbound connection to the target org
- D. Modify the target org to accept an outbound connection from the source org

Answer: A,B

NEW QUESTION # 125

Cloud Kicks is switching to Salesforce from a different CRM. They have existing datasets for all standard Salesforce objects. In which optimized order should the architect recommend these objects be loaded?

- A. Accounts, Contacts, Leads, Products, Opportunities, Opportunity Line Items
- B. Leads, Contacts, Accounts, Opportunities, Products, Opportunity Line Items
- C. Accounts, Contacts, Opportunities, Products, Opportunity Line Items, Leads
- D. Leads, Accounts, Contacts, Products, Opportunities, Opportunity Line Items

Answer: A

Explanation:

The optimized order to load the objects is: accounts, contacts, leads, products, opportunities, opportunity line items. This order follows the dependency and relationship rules among the objects, such as: accounts must be loaded before contacts, as contacts are related to accounts; leads must be loaded before opportunities, as opportunities can be converted from leads; products must be loaded before opportunity line items, as opportunity line items are related to products; and opportunities must be loaded before opportunity line items, as opportunity line items are related to opportunities. See [Data Import Order] for more details.

NEW QUESTION # 126

Universal Containers are concerned that after each release, reports and dashboards seem to roll back to previous versions. Executives spend many hours crafting these dashboards to perfectly meet their needs, and are now questioning the Salesforce platform's ability to save things, even data records.

What can the Salesforce architect advise to stop the rollbacks from happening?

- A. Use a third-party data warehouse.
- B. Remove the executive's ability to change reports, and only allow developers to do that.
- C. Back up all the reports just before the release, then reimport them after the release,
- D. Ensure report metadata is exported daily and that it is merged into the developer branches before the next release.

Answer: D

NEW QUESTION # 127

Universal Containers (UC) is working on a major project and has determined that its approach to a certain feature will no longer work with an upcoming Salesforce platform release (e.g., Winter to Spring). What should a Technical Architect recommend to address this issue?

- A. Submit a request to Salesforce to enable the 'delay upgrade' feature in their org. Have the UC administrator schedule the upgrade for a later date
- B. Continue development in a non-upgraded sandbox, and have the developer update the API version of the code to the upcoming API version for testing purposes

- C. Determine the developer sandbox upgrade schedule, and have the developer refactor the approach to the feature in the upgraded sandbox
- D. Continue with the current approach, since Salesforce will rectify the issue prior to updating the production environment to the new platform release

Answer: C

Explanation:

Explanation

The best option is to refactor the approach to the feature in an upgraded sandbox, as this will allow the developer to test the compatibility and functionality of the code with the new platform release. Option A is risky, as Salesforce may not fix the issue before the production upgrade. Option B is not feasible, as changing the API version of the code will not change the platform version of the sandbox. Option C is not recommended, as delaying the upgrade will only postpone the problem and may cause more issues later.

NEW QUESTION # 128

What are two limitations an architect should consider when designing a strategy for managing technical reference data, with multiple related objects?

Choose 2 answers

- A. Circular relationships
- B. Apex CPU limits
- C. HTTP response size
- D. Depth of nested relationships

Answer: B,C

Explanation:

Apex CPU limits and HTTP response size are two limitations that an architect should consider when designing a strategy for managing technical reference data, with multiple related objects. Apex CPU limits may be exceeded if the data retrieval or manipulation logic is complex or inefficient. HTTP response size may be too large if the data payload contains many related objects or fields. Circular relationships and depth of nested relationships are not limitations, but design considerations that may affect the data model and query performance.

NEW QUESTION # 129

.....

How our Development-Lifecycle-and-Deployment-Architect study questions can help you successfully pass your coming Development-Lifecycle-and-Deployment-Architect exam? The answer lies in the outstanding Development-Lifecycle-and-Deployment-Architect exam materials prepared by our best industry professionals and tested by our faithful clients. Our exam materials own the most authentic and useful information in questions and answers. For our Development-Lifecycle-and-Deployment-Architect practice material have been designed based on the format of real exam questions and answers that you would surely find better than the other exam vendors’.
