NEW QUESTION # 747

When creating a file format to load JSON data into Snowflake, what command will remove brackets ([]) from the data?

- A. TRIM_SPACE = TRUE
- B. STRIP_NULL_VALUES = TRUE
- C. REPLACE_INVALID_CHARACTERS = TRUE
- D. STRIP OUTER ARRAY = TRUE

Answer: D

Explanation:

* When creating a file format to load JSON data into Snowflake, the STRIP_OUTER_ARRAY option is used to remove outer brackets ([]) from a JSON array.

* Key Use Case: This is particularly helpful when the JSON data contains a top-level array, and you want to treat its elements as separate records for loading into Snowflake.

* Example:

sql

CopyEdit

```
CREATE FILE FORMAT my_json_format
```

```
TYPE = JSON
```

```
STRIP_OUTER_ARRAY = TRUE;
```

Why Other Options Are Incorrect:

* A. STRIP_NULL_VALUES: Removes NULL values, not brackets.

* B. REPLACE_INVALID_CHARACTERS: Replaces invalid characters but does not remove brackets.

* C. TRIM_SPACE: Removes leading and trailing spaces, unrelated to JSON brackets.

What is the Fail-safe period for a transient table in the Snowflake Enterprise edition and higher?

- **A. 0 days**
- B. 1 day
- C. 14 days
- D. 7 days

Answer: A

The Fail-safe period for a transient table in Snowflake, regardless of the edition (including Enterprise edition and higher), is 0 days. Fail-safe is a data protection feature that provides additional retention beyond the Time Travel period for recovering data in case of accidental deletion or corruption. However, transient tables are designed for temporary or short-term use and do not benefit from the Fail-safe feature, meaning that once their Time Travel period expires, data cannot be recovered.
