# Free PDF Quiz 2025 Fantastic Netskope NSK300: Netskope Certified Cloud Security Architect Interactive EBook

To stand in the race and get hold of what you deserve in your career, you must check with all the PassLeaderVCE Netskope NSK300 Exam Questions that can help you study for the NSK300 certification exam and clear it with a brilliant score. You can easily get these Netskope Certified Cloud Security Architect (NSK300) exam dumps from PassLeaderVCE that are helping candidates achieve their goals. As a working person, the Netskope NSK300 Practice Exam will be a great help because you are left with little time to prepare for the NSK300 certification exam which you cannot waste to make time for the NSK300 exam questions.

In contemporary society, information is very important to the development of the individual and of society NSK300 practice test. In terms of preparing for exams, we really should not be restricted to paper material, our electronic NSK300 preparation materials will surprise you with their effectiveness and usefulness. I can assure you that you will pass the NSK300 Exam as well as getting the related certification. There are so many advantages of our electronic NSK300 study guide, such as High pass rate, Fast delivery and free renewal for a year to name but a few.

## 100% Pass Quiz NSK300 - Netskope Certified Cloud Security Architect Interactive EBook

If you want to pass your exam and get your certification, we can make sure that our NSK300 guide questions will be your ideal choice. Our company will provide you with professional team, high quality service and reasonable price. In order to help customers solve problems, our company always insist on putting them first and providing valued service. We deeply believe that our NSK300 question torrent will help you pass the exam and get your certification successfully in a short time. Maybe you cannot wait to understand our NSK300 Guide questions; we can promise that our products have a higher quality when compared with other study materials. At the moment I am willing to show our NSK300 guide torrents to you, and I can make a bet that you will be fond of our

products if you understand it.

# Netskope NSK300 Exam Syllabus Topics:

| Topic | Details |
|---|---|
| Topic 1 | • Security Policy Management: One of the main competencies evaluated in this topic is the creation and management of granular security rules for cloud resources and applications. |
| Topic 2 | • Netskope Platform Monitoring and Troubleshooting: It focuses on monitoring Netskope's health, identifying possible problems, and successfully resolving them. |
| Topic 3 | • Cloud Security Concepts: This topic covers best practices, compliance requirements, and fundamental understanding of cloud security threats. |
| Topic 4 | • Cloud Threat Detection and Response: This article describes how to use Netskope in a cloud environment for threat hunting, investigation, and incident response. |
| Topic 5 | • Advanced Threat Protection: This topic explores how Netskope detects and mitigates sophisticated threats, such as malware and cloud data breaches. |

# Netskope Certified Cloud Security Architect Sample Questions (Q29-Q34):

**NEW QUESTION # 29**
You are currently designing a policy for AWS S3 bucket scans with a custom DLP profile Which policy action(s) are available for this policy?

- A. Alert, Quarantine
- B. Alert only
- C. Alert, Quarantine. Block, User Notification
- D. Alert, User Notification

**Answer: A**

Explanation:
When designing a policy for AWS S3 bucket scans with a custom DLP profile in Netskope, the available policy actions are Alert and Quarantine. These actions allow you to be notified when a policy violation occurs and to quarantine sensitive data to prevent potential data loss or exposure. The Alert action will notify the designated personnel or system when a match to the DLP profile is found during the scan. The Quarantine action will move the offending file to a secure location where it can be reviewed and dealt with appropriately1.

**NEW QUESTION # 30**
You have an NG-SWG customer that currently steers all Web traffic to Netskope using the Netskope Client. They have identified one new native application on Windows devices that is a certificate-pinned application. Users are not able to access the application due to certificate pinning. The customer wants to configure the Netskope Client so that the traffic from the application is steered to Netskope and the application works as expected.
Which two methods would satisfy the requirements? (Choose two.)

- A. Configure domain exceptions in the steering configuration for the domains used by the native application.
- B. Tunnel traffic to Netskope and bypass traffic inspection at the Netskope proxy.
- C. Configure the SSL Do Not Decrypt policy to not decrypt traffic for domains used by the native application.
- D. Bypass traffic using the bypass action in the Real-time Protection policy.

**Answer: A,C**

Explanation:
To address the issue of a certificate-pinned application not being accessible due to certificate pinning, while still steering the traffic to Netskope, the two methods that would satisfy the requirements are:

B: Configure the SSL Do Not Decrypt policy to not decrypt traffic for domains used by the native application. This ensures that the SSL traffic for the specified domains is not decrypted, thus avoiding issues with certificate pinning.
C: Configure domain exceptions in the steering configuration for the domains used by the native application. By setting domain exceptions, traffic to these domains will bypass SSL decryption, allowing the certificate-pinned application to function as expected1. These methods are in line with Netskope's capabilities for handling certificate-pinned applications, which often require bypassing decryption to prevent breaking the application's functionality due to its security features1.

## NEW QUESTION # 31
Review the exhibit.

AcmeCorp has recently begun using Microsoft 365. The organization is concerned that employees will start using third-party non-AcmeCorp OneDrive instances to store company data. The CISO asks you to use Netskope to create a policy that ensures that no data is being uploaded to non-AcmeCorp instances of OneDrive.
Referring to the exhibit, which two policies would accomplish this posture? (Choose two.)

- A. 0
- B. 1
- C. 2
- D. 3

**Answer: C,D**

Explanation:
To ensure that no data is uploaded to non-AcmeCorp instances of OneDrive, the policies that would accomplish this are:
* Policy B: This policy allows traffic only for AcmeCorp's OneDrive and blocks all other Microsoft 365 Suite traffic. It ensures that data is not uploaded to non-AcmeCorp OneDrive instances by restricting access to only the corporate instance of OneDrive.
* Policy C: This policy allows traffic for AcmeCorp's Microsoft 365 Suite but blocks all other OneDrive for Business traffic. It achieves the same outcome by permitting corporate suite usage while preventing uploads to any OneDrive for Business instances that are not part of AcmeCorp.
These policies are designed to provide granular control over the data flow, ensuring that company data remains within the corporate environment and is not transferred to external or personal storage solutions.
The policies are based on Netskope's capabilities for real-time protection and data security, which allow organizations to enforce granular access and control policies. The information aligns with the best practices for setting up such policies as described in Netskope's documentation and resources

**NEW QUESTION # 32**
A company needs to block access to their instance of Microsoft 365 from unmanaged devices. They have configured Reverse Proxy and have also created a policy that blocks login activity for the AD group "marketing-users" for the Reverse Proxy access method. During UAT testing, they notice that access from unmanaged devices to Microsoft 365 is not blocked for marketing users.
What is causing this issue?

- A. The username in the name ID field does not have the "marketing-users" group name.
- B. The username in the name ID field is not in the format of the e-mail address.
- C. There is a missing group name in the SAML response.
- D. There is an invalid certificate in the SAML response.

**Answer: C**

Explanation:
The issue is likely caused by a missing group name in the SAML response (A). When access to Microsoft 365 from unmanaged devices is not blocked as expected, despite having a policy in place, it often indicates that the SAML assertion is not correctly identifying the user as a member of the restricted group. In this case, the "marketing-users" group name should be present in the SAML response to enforce the policy that blocks login activity for this group. If the group name is missing, the policy will not apply, and users will not be blocked as intended.

**NEW QUESTION # 33**
Your company just had a new Netskope tenant provisioned and you are asked to create a secure tenant configuration. In this scenario, which two default settings should you change? {Choose two.)

- A. Change Untrusted Root Certificate to Block.
- B. Change "Disallow concurrent logins by an Admin" to Enabled.
- C. Change the No SNI setting to Block.
- D. Change Safe Search to Disabled

**Answer: A,B**

Explanation:
For a new Netskope tenant provisioned, to create a secure tenant configuration, you should consider changing the following default settings:
* B. Change Untrusted Root Certificate to Block: This setting will ensure that any traffic coming from an untrusted root certificate is blocked, which is a critical security measure to prevent man-in-the-middle attacks and other types of cyber threats1.
* D. Change "Disallow concurrent logins by an Admin" to Enabled: This setting will prevent multiple concurrent logins by the same admin account, which is an important security control to mitigate the risk of unauthorized access. If an admin's credentials are compromised, this setting will help limit the potential damage by ensuring that only one session can be active at a time1.

These changes are part of the recommended security hardening guidelines for Netskope tenants to enhance the overall security posture of the tenant environment.
The recommendations for changing default settings for a secure tenant configuration are based on Netskope's security hardening guidelines, which provide detailed instructions on how to enhance the security of Netskope products and components deployed in customer environments1.

**NEW QUESTION # 34**

......

We know that once we sell fake products to customers, we will be knocked out by the market. So we strongly hold the belief that the quality of the NSK300 practice materials is our lifeline. When you begin practicing our NSK300 study materials, you will find that every detail of our NSK300 study questions is wonderful. Because that we have considered every detail on the developing the exam braindumps, not only on the designs of the content but also on the displays.
