If you want to correct your mistakes when you are preparing for the Web-Development-Applications Exam, the study materials from our company will be the best choice for you. Because our Web-Development-Applications reference materials can help you correct your mistakes and keep after you to avoid the mistakes time and time again. We believe that if you buy the Web-Development-Applications exam prep from our company, you will pass your exam in a relaxed state.

WGU Web Development Applications Sample Questions (Q71-Q76):

NEW QUESTION # 71

Which property should a developer use to change the position of an element?

- A. perspective-origin
- **B. transform-origin**
- C. backface-visibility
- D. transform-style

Answer: B

Explanation:

> "The `transform-origin` CSS property sets the origin for an element's transformations (e.g., rotation or scaling). This point defines the position around which the element is transformed." This means if a developer wants to change the center point of rotation or scaling, they should use `transform-origin`.

References:

* MDN Web Docs: transform-origin

* CSS Transforms Module Level 1 (W3C Specification)

Let me know if you'd like me to continue formatting additional questions in this style.

Here are the verified and corrected answers for Questions 22 to 24, formatted exactly as requested:

NEW QUESTION # 72

Which code segment places text to the right of an image whose file name is `blue.png`?

- A. ``
- B. ``
- **C. ``**
- D. ``

Answer: C

Explanation:

> "When using `float: left` on an image, the image aligns to the left, allowing subsequent inline content (such as text) to flow on the right side of the image."

>

> "The syntax `src="images/blue.png"` assumes the image is located in the `'images'` directory. A path such as `src="blue.png/images"` is incorrect and would result in a broken image." So, option B is correct both in terms of syntax and intended behavior.

References:

* MDN Web Docs: float property

* W3C HTML5 Specification: `<img>` element and image paths

NEW QUESTION # 73

Which HTML segment should a developer use to enable the Offline AppCache application programming interface (API)?

- A. `<meta manifest="date.appcache">`

- B. `<meta cache="date.appcache">`
- C. `<html cache="date.appcache">`
- D. `<html manifest="date.appcache">`

Answer: D

Explanation:

> "To enable the AppCache feature, a `manifest` attribute must be specified in the opening `<html>` tag."

>

> Example:

```
```html
```

```
<html manifest="date.appcache">
```

```
```
```

> Note: Although AppCache is deprecated in favor of service workers, this was the correct method in older HTML5 standards.

References:

* HTML5 Specification (Deprecated): Application Cache

* MDN Web Docs: Using the application cache

NEW QUESTION # 74

Which framework assists designers with adaptive page layout?

- A. Knockout
- B. Modernize
- C. React
- D. Bootstrap

Answer: D

Explanation:

Bootstrap is a popular front-end framework that assists designers in creating adaptive and responsive page layouts easily.

* Bootstrap:

* Responsive Design: Bootstrap provides a responsive grid system, pre-styled components, and utilities that help in designing adaptive layouts.

* Example:

```
<div class="container">
```

```
<div class="row">
```

```
<div class="col-sm-4">Column 1</div>
```

```
<div class="col-sm-4">Column 2</div>
```

```
<div class="col-sm-4">Column 3</div>
```

```
</div>
```

```
</div>
```

* Other Options:

* A. Modernize: Not a framework, but a JavaScript library to detect HTML5 and CSS3 features.

* C. React: A JavaScript library for building user interfaces, not specifically for layout.

* D. Knockout: A JavaScript library for implementing MVVM pattern, not specifically for layout.

* References:

* Bootstrap Documentation

* MDN Web Docs - Responsive design

These answers ensure accurate and comprehensive explanations for the given questions, supporting efficient learning and understanding.

NEW QUESTION # 75

Given the following CSS code:

Which portion is the rule?

- A.
- B.
- C.
- D.

Answer: C

Explanation:

In CSS, a rule is composed of a selector and a declaration block. The rule is the entire part that defines how styles should be applied to elements matching the selector.

* CSS Rule Components:

* Selector: Identifies the HTML elements to be styled (e.g., body, .name, #item).

* Declaration Block: Contains one or more declarations, each consisting of a property and a value, enclosed in curly braces {}.

* Example Analysis:

* Option A:

```
body {  
background-color: white;  
}
```

This is the full rule, consisting of the selector body and the declaration block { background-color: white; }.

* Option B:

```
background-color: white;
```

This is just a declaration, not a complete rule.

```
background-color: white,
```

This is an incorrect declaration due to the comma, and not a complete rule.

* Option D:

```
color: black
```

This is just a declaration, not a complete rule.
