Microsoft Exam AZ-801

Guide to Configuring Windows
Server Hybrid Advanced Services

Greg Tomsho

P.S. Free 2025 Microsoft AZ-801 dumps are available on Google Drive shared by ExamsTorrent: <https://drive.google.com/open?id=1MEdr88pem3ugObcMLE0RwyGHPgXIMf6a>

ExamsTorrent has collected the frequent-tested knowledge into our AZ-801 practice materials for your reference according to our experts' years of diligent work. So our AZ-801 exam materials are triumph of their endeavor. By resorting to our AZ-801 practice materials, we can absolutely reap more than you have imagined before. We have clear data collected from customers who chose our AZ-801 training engine, the passing rate is 98-100 percent. So your chance of getting success will be increased greatly by our AZ-801 exam questions.

The Microsoft AZ-801 exam consists of various topics, such as configuring and managing hybrid identities, implementing and managing virtual networking, managing hybrid workloads, and securing hybrid environments. Candidates who pass the exam will be able to demonstrate their ability to design, implement, and manage complex Windows Server Hybrid solutions.

The AZ-801 exam is the successor to the previous AZ-103 and AZ-104 exams, and it is part of the new Azure Administrator certification path. Passing AZ-801 Exam demonstrates that an individual has the skills required to design, implement, and manage complex hybrid solutions that integrate on-premises and cloud resources. AZ-801 exam consists of around 40-60 questions and has a time limit of 150 minutes. It is recommended that candidates have at least one year of experience with Azure and Windows Server before attempting AZ-801 exam.

AZ-801 Practice Mock & AZ-801 Reliable Test Sims

You will find the same ambiance and atmosphere when you attempt the real Microsoft AZ-801 exam. It will make you practice nicely and productively as you will experience better handling of the Configuring Windows Server Hybrid Advanced Services questions when you take the actual Microsoft AZ-801 Exam to grab the Microsoft AZ-801 certification.

Microsoft AZ-801 exam covers a wide range of topics related to hybrid cloud management, including Azure Arc-enabled servers, Azure site recovery, Azure backup, Azure file sync, and Azure Update Management. AZ-801 Exam also tests the candidate's knowledge of security and compliance in hybrid environments.

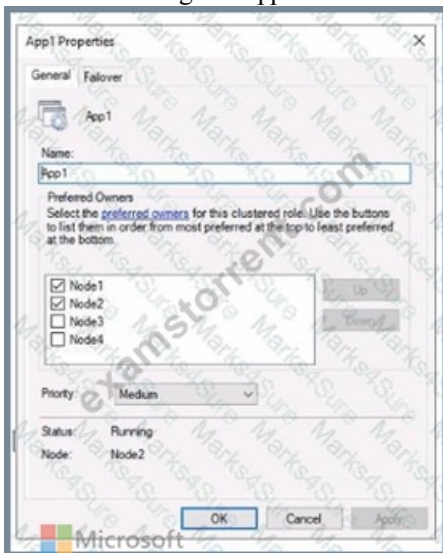

Microsoft Configuring Windows Server Hybrid Advanced Services Sample Questions (Q25-Q30):

NEW QUESTION # 25

You have a Windows Server Failover Cluster (WSFQ) that has the following configurations:

- * Name: App1
- * Owner node: Node3
- * Type: Generic Application

The General settings for App1 are shown in the General exhibit. (Click the General tab.)

The Failover settings for App1 are shown in the Failover exhibit. (Click the Failover tab.)

The Advanced Policies settings for App1 are shown in the Advanced Policies exhibit. (Click the Advanced Policies tab.)

App1 Properties

General **Fallover**

Fallover

Specify the number of times the Cluster service will attempt to restart or fail over the clustered role in the specified period.

If the clustered role fails more than the maximum in the specified period, it will be left in the failed state.

Maximum failures in the specified period:

Period (hours):

Fallback

Specify whether the clustered role will automatically fail back to the most preferred owner (which is set on the General tab).

☐ Prevent fallback

☒ Allow fallback

☒ Immediately

☐ Fallback between: and hours

OK Cancel Apply

For each of the following statements, select Yes if the statement is true Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer Area

Statements

You can move App1 to Node4 manually. ☐ Yes ☐ No

If Node3 fails, App1 will fail over to Node2 automatically. ☐ Yes ☐ No

If App1 automatically fails over from Node3, App1 will fail back to Node3 automatically after Node3 is repaired. ☐ Yes ☐ No

Answer:

Explanation:

Answer Area

Statements

You can move App1 to Node4 manually. ☐ Yes ☒ No

If Node3 fails, App1 will fail over to Node2 automatically. ☐ Yes ☒ No

If App1 automatically fails over from Node3, App1 will fail back to Node3 automatically after Node3 is repaired. ☒ Yes ☐ No

Explanation:

Answer Area

Statements

You can move App1 to Node4 manually. ☐ Yes ☒ No

If Node3 fails, App1 will fail over to Node2 automatically. ☐ Yes ☒ No

If App1 automatically fails over from Node3, App1 will fail back to Node3 automatically after Node3 is repaired. ☒ Yes ☐ No

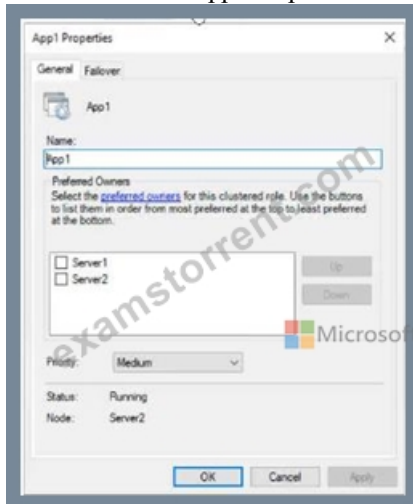

NEW QUESTION # 26

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

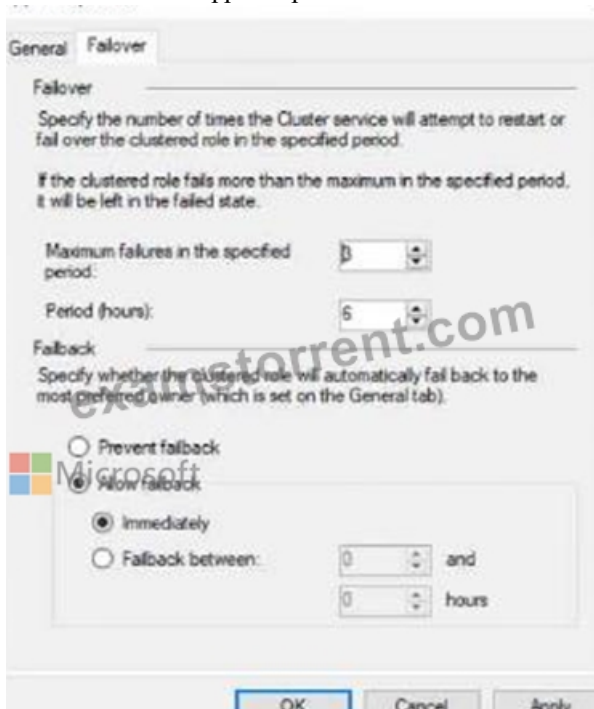

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a failover cluster named Cluster1 that hosts an application named App1.

The General tab in App1 Properties is shown in the General exhibit. (Click the General tab.)

The Failover tab in App1 Properties is shown in the Failover exhibit. (Click the Failover tab.)

Server1 shuts down unexpectedly.

You need to ensure that when you start Server1, App1 continues to run on Server2.

Solution: You increase Maximum failures in the specified period for the App1 cluster role.

Does this meet the goal?

- A. Yes
- B. No

Answer: B

Explanation:

The Maximum failures setting is used to determine when the cluster determines that a node is offline. It does not affect whether a cluster will fail back when a node comes online.

NEW QUESTION # 27

You have an Azure virtual machine named VM1 that runs Windows Server.
The operating system on VM1 fails to fully initialize its network stack, and you cannot establish a network connection.
You need to establish an interactive shell session.
What should you use?

- A. just-in-time (JIT) VM access
- B. Azure Bastion
- C. Serial console

Answer: B

NEW QUESTION # 28

You have three servers named Server1, Server2, Server3 that run Windows Server and have the Hyper-V server role installed.
You plan to create a hyper-converged cluster to host Hyper-V virtual machines.
You need to ensure that you can store virtual machines in Storage Spaces Direct.
Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

- Create a failover cluster.
- Create a Distributed File System (DFS) namespace.
- Enable Storage Spaces Direct.
- Create a volume.
- Add a Scale-Out File Server for application role.
- Create a file share.

Answer Area

Answer:

Explanation:

Actions	Answer Area
Create a failover cluster.	Create a failover cluster.
Create a Distributed File System (DFS) namespace.	
Enable Storage Spaces Direct.	Enable Storage Spaces Direct.
Create a volume.	
Add a Scale-Out File Server for application role.	Create a volume.
Create a file share.	

Explanation:

Graphical user interface, text, application Description automatically generated

Create a failover cluster.
Enable Storage Spaces Direct.
Create a volume

NEW QUESTION # 29

You have two servers that run Windows Server as shown in the following table.

Name	Location	Domain/workgroup
Server1	On-premises	Domain
Server2	Azure virtual machine	Workgroup

You need to copy the contents of volume E from Server1 to Server2. The solution must meet the following requirements:

- * Ensure that files in-use are copied.
- * Minimize administrative effort.

What should you use?

- **A. Storage Migration Service**
- B. Storage Replica
- C. Azure Backup
- D. Azure File Sync

Answer: A
