Latest Cisco Latest Mock Exam – Pass-Sure Latest Test 300-620 Experience

Three formats of Cisco 300-620 practice material are always getting updated according to the content of real Cisco 300-620

examination. The 24/7 customer service system is always available for our customers which can solve their queries and help them if they face any issues while using the 300-620 Exam product. Besides regular updates, Actual4Exams also offer up to 1 year of free real Implementing Cisco Application Centric Infrastructure (300-620) exam questions updates.

Cisco Implementing Cisco Application Centric Infrastructure Sample Questions (Q289-Q294):

NEW QUESTION # 289

Engineer resolves an underlying condition of a fault but notices that the fault was not deleted from the Faults view. Which two actions must be taken to remove the fault? (Choose two.)

- A. The soaking timer expires.
- B. The raised condition ceases.
- C. The fault is deleted after the retention interval.
- D. Acknowledge the fault as an administrator.

Answer: C,D

NEW QUESTION # 290

An engineer must configure a service graph for the policy-based redirect to redirect traffic to a transparent firewall. The policy must be vendor-agnostic to support any firewall appliance. Which two actions accomplish these goals? (Choose two.)

- A. Set Context Aware to Single.
- B. Set Managed to True.
- C. Set the Service Type to Other.
- D. Set Function Type to L2.
- E. Set Promiscuous Mode to True.

Answer: C,D

NEW QUESTION # 291

An engineer must set up a Cisco ACI fabric to send Syslog messages related to hardware events, such as chassis line card failures. The messages should be sent to a dedicated Syslog server. Where in the Cisco APIC should the policy be configured to meet this requirement?

- A. uni/tn-common/monepg-default
- B. uni/infra/monifra-default
- C. uni/fabric/moncommon
- D. uni/fabric/monfab-default

Answer: D

Explanation:

To set up a Cisco ACI fabric to send Syslog messages related to hardware events to a dedicated Syslog server, the policy should be configured at uni/fabric/monfab-default. This location in the Cisco APIC allows for the configuration of Syslog policies that can be applied to the entire fabric.

https://www.cisco.com/c/en/us/td/docs/switches/datacenter/aci/apic/sw/4-x/aci-fundamentals/Cisco-ACI-Fundamentals-401/Cisco-ACI-Fundamentals-401_chapter_01100.html

Configuring Monitoring Policies

Administrators can create monitoring policies with the following four broad scopes:

- Fabric Wide: includes both fabric and access objects
- Access (also known as infrastructure): access ports, FEX, VM controllers, and so on
- Fabric: fabric ports, cards, chassis, fans, and so on
- Tenant: EPGs, application profiles, services, and so on

The APIC includes the following four classes of default monitoring policies:

- monCommonPol (uni/fabric/moncommon): applies to both fabric and access infrastructure hierarchies
- monFabricPol (uni/fabric/monfab-default): applies to fabric hierarchies
- monInfraPol (uni/infra/monifra-default): applies to the access infrastructure hierarchy
- monEPGPo1 (uni/tn-common/monepg-default): applies to tenant hierarchies

NEW QUESTION # 292

Refer to the exhibit.

Refer to the exhibit. Server A is connected to the Cisco ACI fabric using two teamed interfaces. One interface in a team is configured as active and the other remains in standby mode. When a failover occurs and the standby interface becomes active, it uses its built-in MAC address to send traffic. Which bridge domain configuration must be applied to resolve the issue?

- A. Configure Hardware proxy.
- B. Enable ARP flooding.

- C. Set L2 Unknown Unicast to Flood.
- D. Activate Limit IP Learning to Subnet.

Answer: B

Explanation:

In the scenario where Server A is connected to the Cisco ACI fabric using teamed interfaces with one active and one standby, enabling ARP flooding in the bridge domain configuration is necessary to resolve the issue that occurs when the standby interface becomes active and uses its built-in MAC address to send traffic. Enabling ARP flooding allows the fabric to learn the new MAC address without waiting for the ARP timeout, which helps to ensure that traffic continues to flow to the correct destination after a failover event¹.

NEW QUESTION # 293

Which two protocols support accessing backup files on a remote location from the APIC?
(Choose two.)

- A. FTP
- B. HTTPS
- C. SFTP
- D. SMB
- E. TFTP

Answer: A,C

Explanation:
