Valid ACD201 Study Materials & ACD201 Real Brain Dumps

We are never complacent about our achievements, so all content of our ACD201 exam questions are strictly researched by proficient experts who absolutely in compliance with syllabus of this exam. Accompanied by tremendous and popular compliments around the world, to make you feel more comprehensible about the ACD201 study prep, all necessary questions of knowledge

concerned with the exam are included into our ACD201 simulating exam.

Appian ACD201 Exam Syllabus Topics:

Topic	Details
Topic 1	Performance and Scalability: This section of the exam measures the skills of Appian Developers and covers designing performant components, building memory-efficient models, conducting database load and automated testing, analyzing server memory and logs for risks, and resolving performance concerns for end users.
Topic 2	Data Management: This section of the exam measures the skills of Solution Architects and covers designing and documenting data models, recommending record types for optimization and security, working with relational data, and implementing complex models with supporting objects.
Topic 3	Application Design and Development: This section of the exam measures the skills of Appian Developers and covers translating business requirements into user stories, building end-to-end applications, managing object security, applying design best practices, and ensuring user-centric experiences through proper UX design.
Topic 4	Advanced Appian Concepts: This section of the exam measures the skills of Solution Architects and covers creating and configuring authentication methods, setting up integration objects, designing APIs, evaluating smart services and plug-ins, and applying SSO mechanisms with SAML and LDAP.

Appian Senior Developer Sample Questions (Q97-Q102):

NEW QUESTION # 97

You need to configure Appian user authentication against an external directory server. The requirement is to use the same corporate logon information without single sign-on (SSO).

Which authentication type should you use?

- A. OpenID Connect authentication
- B. PIEE user authentication
- C. LDAP authentication

Answer: C

Explanation:

LDAP authentication allows users to log in with their corporate credentials by authenticating against an external directory server, without requiring single sign-on (SSO).

NEW QUESTION # 98

What are two advantages of database normalization? (Choose two.)

- A. Minimizing data redundancy.
- B. Simplifying query statements to read data.
- C. Enforcing data integrity.
- D. Minimizing the number of tables that need to be created.

Answer: A,C

Explanation:

Database normalization enforces data integrity by structuring data and relationships to prevent anomalies.

It minimizes data redundancy by ensuring each piece of information is stored only once, reducing duplication.

NEW QUESTION # 99

You're creating a new record type with data sync enabled. Users in the "ACME Employees" group must be able to access the

record list and start the New Case action.

What are two valid steps that you should perform to grant users the appropriate access? (Choose two.)

- A. Add the "ACME Employees" group as a Viewer on the record type.
- B. Grant Viewer permissions to the underlying interface object for the record list.
- C. Grant Initiator permissions to the underlying process model for the New Case action.
- D. Add the "ACME Employees" group as a Viewer to the data store mapped to the record.

Answer: A,C

Explanation:

Adding the "ACME Employees" group as a Viewer on the record type allows them to access the record list.

Granting Initiator permissions to the process model for the New Case action enables group members to start that action.

NEW QUESTION # 100

Which step should you perform to identify expression rules that have been causing or have caused performance issues in the past 30 days?

- A. Navigate to the Admin Console > Rule Performance tab.
- B. Monitor the runtime of all test cases.
- C. Examine the application server log

Answer: A

Explanation:

The Admin Console > Rule Performance tab provides metrics and insights on expression rules that have caused performance issues in the past 30 days, allowing you to identify and address slow-running rules.

NEW QUESTION # 101

An insurance company's product details are currently distributed across numerous database tables, encompassing over 60 to 70 fields.

You need to implement a product comparison tool for business users to compare up to three insurance products simultaneously, with all the product details in a tabular format.

Refer to the following sample format:

Attribute	PRODUCT 1	PRODUCT 2	PRODUCT 3
Name			
Type			
Premium			
Average			
Claim time			

Which object should be used to transform the data into the required format?

- A. VCCViews
- B. Stored procedure
- C. Record type with relationships

Answer: A

Explanation:

Database views are ideal for transforming complex, distributed product data into a single, flattened structure tailored for reporting or comparison. In this case, a view can pivot the 60-70 fields and organize them by attribute (e.g., Name, Type, Premium) across multiple product columns, enabling a tabular comparison layout like the one shown. Views also optimize performance and reduce transformation overhead in the interface layer.
