Our updated WGU questions are available in these three different formats: web-based practice test, desktop practice exam software, and WGU PDF file of real exam questions. The goal of these formats is to aid test candidates in preparing for the WGU Web-Development-Applications test according their styles.

WGU Web Development Applications Sample Questions (Q58-Q63):

NEW QUESTION # 58

What allows a scripting language to manipulate elements on a web page?

- A. HTML
- B. CSS
- C. XML
- **D. DOM**

Answer: D

Explanation:

The Document Object Model (DOM) is an API for HTML and XML documents that defines the logical structure of documents and the way a document is accessed and manipulated.

* DOM Explanation:

* The DOM represents the page so that programs can change the document structure, style, and content.

* It provides a way for scripts to update the content, structure, and style of a document while it is being viewed.

* Explanation:

* Option A: CSS is incorrect because it is used for styling web pages.

* Option B: XML is incorrect because it is a markup language, not an API for manipulating web page elements.

* Option C: HTML is incorrect because it is the markup language used to create web pages, not an API for manipulation.

* Option D: DOM is correct because it allows a scripting language to manipulate elements on a web page.

* References:

* MDN Web Docs - DOM

* W3Schools - JavaScript HTML DOM

NEW QUESTION # 59

Which event fires when an issue occurs while an external file loads?

- A. stalled
- B. invalid
- C. suspend
- **D. error**

Answer: D

Explanation:

> "The 'error' event is triggered when an error occurs during the loading of an external file such as an image, script, or style."

>

> "Events like 'stalled' and 'suspend' relate more to media buffering; 'invalid' relates to form input validation." References:

* MDN Web Docs: GlobalEventHandlers.onerror

* HTML Standard: Error event

Here are the fully corrected, verified, and formatted answers for Questions 37 to 40, as per your specifications:

NEW QUESTION # 60

Which 3D transform affects the distance between the z-plane and the user?

- A.
- B.
- C.
- D.

Answer: C

Explanation:

The `perspective(n)` method in CSS is used to affect the distance between the z-plane and the user, effectively changing the perspective depth of a 3D transformed element.

* `perspective(n)` Method: The `perspective` function defines how far the element is from the user. It affects the appearance of the 3D transformed element, giving it a sense of depth.

* Usage Example:

```
container {  
  perspective: 1000px;  
}
```

In this example, the perspective is set to 1000 pixels, which defines the distance between the z-plane and the user.

* Properties:

* `n`: This represents the perspective distance. The lower the value, the more pronounced the perspective effect.

W3C CSS Transforms Module Level 1

NEW QUESTION # 61

What should a developer increase to create space between a border and content?

- A. Height
- B. Margin
- C. Width
- D. **Padding**

Answer: D

Explanation:

Padding is the CSS property used to create space between the content of an element and its border. It is an internal spacing within the element.

* CSS Box Model:

* Content: The innermost part, where text and images appear.

* Padding: The space between the content and the border.

* Border: The edge of the element.

* Margin: The space outside the border, creating space between different elements.

* Usage:

* Padding:

```
div {  
  padding: 20px;  
}
```

* This code adds 20 pixels of padding on all sides of the content within the element.

W3C CSS Box Model

NEW QUESTION # 62

Which method retrieves periodic updates about the geographic location of a user:

- A. `getContext`

- B. ClearWatch
- C. getCurrentPosition
- D. WatchPosition

Answer: D

Explanation:

The watchPosition method in the Geolocation API is used to get periodic updates about the geographic location of a user.

* watchPosition Method: This method calls the provided callback function with the user's current position as the device's location changes.

* Usage Example:

```
navigator.geolocation.watchPosition(function(position) {
  console.log("Latitude: " + position.coords.latitude + ", Longitude: " + position.coords.longitude);
});
```

In this example, the watchPosition method continuously logs the user's latitude and longitude to the console as the position changes.
