Perfect 220-1101 Latest Test Camp for Real Exam

There is no exaggeration that you can be confident about your coming exam just after studying with our 220-1101 preparation materials for 20 to 30 hours. Tens of thousands of our customers have benefited from our 220-1101 Exam Dumps and passed their exams with ease. The data showed that our high pass rate is unbelievably 98% to 100%. Without doubt, your success is 100% guaranteed with our 220-1101 training guide.

CompTIA A+ Certification Exam: Core 1 Sample Questions (Q124-Q129):

NEW QUESTION # 124

A technician is receiving reports that the entire office sporadically loses network connectivity throughout the day. The technician determines the root cause to be EMI. Which of the following cable mediums would be the MOST cost effective without sacrificing system performance?

- A. Plenum Cat 5e
- **B. Shielded Cat 6**
- C. Multimode fiber
- D. Coaxial

Answer: B

NEW QUESTION # 125

Using the output below:

```
IPv4 Address: 172.25.1.39
Subnet Mask: 255.255.255.0
Router: 172.25.1.252
Name Server: 172.25.1.4
```

Which of the following is the default gateway?

- A. 255.255.255.0
- B. 172.25.1.39
- C. 172.25.1.252
- D. 172.25.1.4

Answer: C

Explanation:

Explanation

The default gateway is the IP address of the router or device that connects a network to another network or the internet. In the output below, the default gateway is 172.25.1.252, as shown in the line "Default Gateway : 172.25.1.252". The other IP addresses are not default gateways, but either local IP addresses (172.25.1.39 and 172.25.1.4) or subnet masks (255.255.255.0).

NEW QUESTION # 126

A customer reports slow network speeds. Which of the following components is most likely failing?

- A. RAM
- B. CPU
- C. NIC
- D. HDD

Answer: C

Explanation:

Comprehensive and Detailed In-Depth Explanation:

A Network Interface Card (NIC) is the hardware responsible for network connectivity. If the NIC is failing or underperforming (e.g., due to a bad driver, hardware fault, or misconfiguration), it can cause slow or unstable network speeds.

* Option A (CPU): A failing CPU affects overall system performance but not specifically network speed.

* Option C (HDD): A slow hard drive causes application lag, but not poor network performance.

* Option D (RAM): Affects multitasking and speed, not network throughput.

CompTIA A+ Core 1 Exam Objective Reference:

* Objective 3.5: Given a scenario, troubleshoot problems related to wired and wireless networks.

NEW QUESTION # 127

A technician is conducting the following tests on a laptop with a wireless NIC:

* ping of the default gateway

* ping of the localhost

* tracert of the IP address of the default gateway

Which of the following will the technician find by running these tests? (Select two).

- A. MAC address of the wireless NIC
- B. Connection latency
- C. DNS suffix
- D. Subnet mask of the network
- E. Wireless signal strength
- F. Firewall status

Answer: B,D

Explanation:

By running the specified tests (ping of the default gateway, ping of the localhost, and tracert of the IP address of the default gateway), the technician can find connection latency and the subnet mask of the network.

Connection latency: The time it takes for a ping or tracert command to send and receive a response helps in determining the latency in the network connection. Higher latency values can indicate delays in communication over the network.

Subnet mask of the network: The ipconfig command, which the technician would initially run to perform these tests, provides various details about the network configuration, including the subnet mask. The subnet mask is essential in determining the network and host portions of an IP address, which is crucial for networking and troubleshooting connectivity issues.

Reference:

CompTIA A+ Core 1 (220-1101) Exam Objectives, specifically sections dealing with troubleshooting network connectivity issues and understanding network configurations, including the use of diagnostic commands like ping and tracert.

Networking fundamentals, which explain the purpose and use of diagnostic tools such as ping (to measure latency) and ipconfig (to view IP configuration details including the subnet mask).

NEW QUESTION # 128

A technician is troubleshooting a phone with limited internet connectivity. The technician has identified the phone on the Wi-Fi network and confirmed that it responds to pings. However, the phone is still unable to open comptia.org. Which of the following should the technician check next?

- A. DNS servers
- B. Certificate store
- C. Airplane mode
- D. Jailbreak status

Answer: A

Explanation:

DNS servers are responsible for translating domain names into IP addresses, which are used to access websites. If the phone has limited internet connectivity, it might be because the DNS servers are not working properly or are blocked by the network. The technician should check the DNS settings on the phone and try to use a different DNS server, such as Google DNS (8.8.8.8 or 8.8.4.4) or Cloudflare DNS (1.1.1.1 or 1.0.0.1).
