[] order: 3871789 email: peter.griffin.guy firstName: Peter lastName: Griffin
address: 31 Sponnen Rd, easy: Quahog, state: RI, country: US
nameOnCard: "Peter L. Griffin" card: 4215837137516263, type: visa, code: 387, exp: 12/2023
```

In which two ways is this log output Improper in a production environment? Choose 2 answers

- A. The log information includes the customer's cardname as it appears along with the credit card number (PAN), which violates PCI.
- B. The log information includes the order number and customer's email, which violates PCI.
- C. Information logs should not be used in a production environment
- D. The log information includes the customer's card CW (card security code) and expiration date, which violates PCI.

Answer: A,B

Explanation:

In a production environment, logging sensitive customer information such as credit card details (PAN, CVV, expiration date) can lead to severe security and compliance issues, specifically violating PCI DSS (Payment Card Industry Data Security Standard) requirements. The standards strictly prohibit the storage of CVV codes and mandate that any PAN displayed must be masked. Storing such data in logs is not only a risk for data breaches but also non-compliance with these standards can lead to penalties. Option A: Including the customer's card name along with the full credit card number in logs is a clear violation of PCI DSS requirements, which stipulate that no more than the last four digits of the card number may be displayed.

Option B: Logging the card security code (CVV) and expiration date is explicitly prohibited by PCI DSS, which requires that sensitive authentication data, including CVV, must never be stored post-authentication, even if it is encrypted.

NEW QUESTION # 15

The Client has requested an Architect's help in documenting the architectural approach to a new home page.

The requirements provided by the business are:

- * Multiple areas of static image content, some may need text shown at well
- * The content page must be Realizable
- * A carousel of featured products must be shown below a banner 101191
- * Recommended categories will be featured based on the time of year

Which two solutions would fulfil these requirements?

Choose 2 answers

- A. Leverage B2C Commerce Page Designer with a dynamic layout.
- B. Leverage B2C Commerce locales in Business Manager
- C. Leverage B2C Commerce content slots and assets
- D. Leverage B2C Commerce Content Management Service

Answer: A,B

NEW QUESTION # 16

An ecommerce site has dynamic shipping cost calculation. it allows the customers to see their potential shipping costs on the Product Detail Page before adding an item to the cart.

For this feature, shipping costs are calculated using the following logic:

- * Set the shipping method on the Basket
- * Add the item to the basket, calculate the basket total and get the shipping cost for this method
- * Remove the item from the Basket to restore the original state
- * The above process is repeated for each shipping method

During the testing it was discovered that the above code violates the `spi.basket.addResolveInSameRequest` quota. What should the Architect do to resolve this issue and maintain the business requirement?

- A. Omit the calculation of shipping cost until the customer is ready to check out and has chosen the shipping method they want to
- B. Wrap each individual step of the process in its own transaction instead of using one transaction for all steps.
- **C. Wrap the adding of product and shipping cost calculation in a transaction which is then rolled back to restore the original state**
- D. Omit the removal of the item and speed up the process for the customer by adding the product to the basket for them.

Answer: C

NEW QUESTION # 17

A Retailer has a single storefront site and a Product Management System (PIM). The PIM is generating the master catalog and storefront categorization catalog every day and it is uploading them to SFTP. How should the Architect configure the import job flows following the best practices?

- A. 1st flow is assigned to the site to download the files from SFTP. 2nd flow is assigned to the site to import the master catalog. 3rd flow is global to import the storefront catalog.
- B. 1st flow is global to download the files from SFTP. 2nd flow is global to import the master catalog. 3rd flow is global to import the storefront catalog.
- C. 1st flow is assigned to the site to download the files from SFTP. 2nd flow is assigned to the site to import the storefront catalog. 3rd flow is global to import the master catalog.
- **D. 1st flow is global to download the files from SFTP. 2nd flow is global to import the storefront catalog. 3rd flow is global to import the master catalog.**

Answer: D

Explanation:

For optimal job flow concerning data import from a PIM system, the sequence should begin with downloading files globally from an SFTP site, followed by importing data into the B2C Commerce platform.

First flow: Download files, ensuring all required files are available and ready for import.

Second flow: Import the storefront catalog which likely has dependencies on the master catalog but is generally smaller and can be updated more rapidly.

Third flow: Import the master catalog, as it typically contains the foundational data needed for various site functionalities.

This sequence respects data dependency and integrity, ensuring that the storefront reflects the most current and accurate information after all relevant data is imported.

NEW QUESTION # 18

A developer uses the `call()` instance method of `dw.svc.Service` to invoke a web service and implemented the callback methods defined by the `dwsvc.ServiceCallback` class.

Which callback method is required only when invoking a SOAP service?

- A. `createRequest`
- B. `mockCall`
- C. `parseResponse`
- **D. `initServiceClient`**

Answer: D
