

Free PDF Quiz Cisco - Professional 300-620 - Implementing Cisco Application Centric Infrastructure Latest Exam Questions

BONUS!!! Download part of GuideTorrent 300-620 dumps for free: https://drive.google.com/open?id=1_x-MPXMudSrkn-FLdWqPDRkXTDqEKYkp

Our company conducts our business very well rather than unprincipled company which just cuts and pastes content from others and sell them to exam candidates. By virtue of our 300-620 practice materials, many customers get comfortable experiences of Whole Package of Services and of course passing the 300-620 Study Guide successfully. As to some exam candidate are desperately eager for useful 300-620 actual tests, our products help you and other customer who are having an acute shortage of efficient practice materials.

How to Taste Success in 300-620 Test?

There is no second opinion that exam 300-620 uses an extensive structure to testify the candidates' understanding of Cisco Switches. Thus, the expertise needed to ace it can only be gained with the help of dependable study resources. Fortunately, the vendor offers a comprehensive training course to help candidates with this issue, which is Implementing Cisco ACI (DCACI) v1.0.

This program has been designed to impart all the information associated with Cisco® Nexus® 9000 Series Switches in Cisco ACI® mode. Gathering the desired cognizance about its configuration is possible with this training, as well as the basic concepts of its management, and hands-on skills in working with Cisco ACI fabric as well as its connection to external networks.

This study option requires candidates to allocate five days for learning. For your comfort, the course is delivered via multiple methods that are instructor-led in-classroom, instructor-led virtual classroom, and self-paced with digital materials. Taking-up guided

sessions has an added advantage as it includes lectures and hands-on lab practices. Other than making you exam-ready, this training helps you earn 40 CE credits toward recertification.

High Pass-Rate 300-620 – 100% Free Latest Exam Questions | Valid 300-620 Vce Dumps

Achieving success in the Cisco 300-620 certification exam opens doors to lucrative job opportunities and career advancements. The Implementing Cisco Application Centric Infrastructure (300-620) credential is highly valuable in today's industry. However, many candidates face the frustration of exam failure and wasted time and resources by relying on outdated Cisco 300-620 Practice Questions. To save both time and money, it is crucial to prepare with the most up-to-date and reliable 300-620 exam questions.

Cisco 300-620 exam covers various topics, including ACI fabric infrastructure, policies, access policies, endpoint groups, application profiles, and service graphs. Candidates are required to have a deep understanding of these concepts, as well as hands-on experience with the ACI platform. 300-620 Exam consists of multiple-choice questions, simulation questions, and drag-and-drop questions, and it lasts for 90 minutes.

Cisco Implementing Cisco Application Centric Infrastructure Sample Questions (Q41-Q46):

NEW QUESTION # 41

Refer to the exhibit.

A systems engineer is implementing the Cisco ACI fabric. However, the Server2 information is missing from the Leaf 101 endpoint table and the COOP database of the spine. The requirement is for the bridge domain configuration to enforce the ACI fabric to forward the unicast packets generated by Server1 destined to Server2. Which action must be taken to meet these requirements?

- A. Set L2 Unknown Unicast to Flood
- B. Enable Unicast Routing
- C. Enable ARP Flooding
- D. Set IP Data-Plane Learning to No

Answer: A

Explanation:

Both servers are in the same subnet. ARP flooding is out if we read the article in the link. Also unicast routing is not needed.

<https://www.cisco.com/c/en/us/solutions/collateral/data-center-virtualization/application-centric-infrastructure/white-paper-c11-739989.html>

Silent hosts considerations

In the case of silent hosts, where an ACI leaf hasn't learned a local endpoint, ACI has some mechanisms to detect those silent hosts. Some of them are controlled by BD configurations. Following are explanations of each scenario with related BD configurations.

For (L2) switched traffic to an unknown MAC, the L2 Unknown Unicast option under the BD may need to be set to "Flood". This is because the ACI fabric with the L2 Unknown Unicast "Hardware-Proxy" configuration drops the L2 unicast packets on the spine in cases where the destination MAC has not been learned as an endpoint anywhere on the BD in ACI, and the COOP database doesn't have the information.

NEW QUESTION # 42

When the subnet is configured on a bridge domain, on which physical devices is the gateway IP address configured?

Gateway IP: 192.168.1.1/24
address/mask

Treat as virtual IP address: ☐

Make this IP address primary: ☐

Scope: ☒ Private to VRF
☐ Advertised Externally
☐ Shared between VRFs

Description: optional

Subnet Control: ☐ No Default SVI Gateway
☒ Querier IP

L3 Out for Route Profile: select a value

Route Profile: select a value

ND RA Prefix policy: select a value

Cancel Submit

- A. only leaf switches where the bridge domain of the tenant is present
- B. only spine switches where the bridge domain of the tenant is present
- C. all border leaf nodes where the bridge domain of the tenant is present
- D. all leaf switches and all spine nodes

Answer: A

Explanation:

<http://www.netdesignarena.com/index.php/2016/06/16/aci-tenant-building-blocks-forwarding-logic/>

[https://www.cisco.com/c/en/us/td/docs/switches/datacenter/aci/apic/sw/1-](https://www.cisco.com/c/en/us/td/docs/switches/datacenter/aci/apic/sw/1-x/Operating_ACI/guide/b_Cisco_Operating_ACI/b_Cisco_Operating_ACI_chapter_0111.html)

[x/Operating_ACI/guide/b_Cisco_Operating_ACI/b_Cisco_Operating_ACI_chapter_0111.html](https://www.cisco.com/c/en/us/td/docs/switches/datacenter/aci/apic/sw/1-x/Operating_ACI/guide/b_Cisco_Operating_ACI/b_Cisco_Operating_ACI_chapter_0111.html)

From a practical perspective, each bridge domain will exist in a particular leaf if there is a connected endpoint that belongs to that endpoint group. Each bridge domain receives a VLAN ID in the leaf switches.

NEW QUESTION # 43

An engineer configures a Multi-Pod system with the default gateway residing outside of the ACI fabric for a bridge domain. Which setting should be configured to support this requirement?

- A. disable Advertise Host Routes

- B. disable IP Data-plane Learning
- C. disable Unicast Routing
- D. disable Limit IP Learning to Subnet

Answer: D

NEW QUESTION # 44

An engineer must securely export Cisco APIC configuration snapshots to a secure, offsite location. The exported configuration must be transferred using an encrypted tunnel and encoded with a platform-agnostic data format that provides namespace support. Which configuration set must be used?

- A. Policy: Export Policy
Protocol: TLS
Format: JSON
- B. Policy: Import Policy
Protocol: SCP
Format: JSON
- C. Policy: Import Policy
Protocol: TLS
Format: XML
- D. Policy: Export Policy
Protocol: SCP
Format: XML

Answer: D

NEW QUESTION # 45

What do Pods use to allow Pod-to-Pod communication in a Cisco ACI Multi-Pod environment?

- A. over Layer 3 Out connectivity via border leafs
- B. over Layer 3 IPN connectivity via spines
- C. over Layer 3 directly connected back-to-back spines
- D. over Layer 3 IPN connectivity via border leafs

Answer: B

Explanation:

Reference:

<https://www.cisco.com/c/en/us/solutions/collateral/data-center-virtualization/application-centric-infrastructure/white-paper-c11-737855.html>

From a physical perspective, the different Pods are interconnected by leveraging an "Inter-Pod Network" (IPN). Each Pod connects to the IPN through the spine nodes; the IPN can be as simple as a single Layer 3 device, or can be built with a larger Layer 3 network infrastructure, as it will be clarified in the "Inter-Pod Connectivity Deployment Considerations" section.
