CompTIA Cloud+ (2024) Sample Questions (Q206-Q211):

NEW QUESTION # 206
Which of the following requirements are core considerations when migrating a small business's on-premises applications to the cloud? (Select two).

- A. Testing
- B. Logs
- C. Availability
- D. Compute
- E. Networking
- F. Hybrid

Answer: C,E

Explanation:
When migrating on-premises applications to the cloud for a small business, availability and networking are core considerations. Ensuring that applications are available and that the network is capable of handling the new cloud traffic are pivotal for a successful transition.
Reference: The migration process and its core considerations, including availability and networking, are topics within the Business Principles of Cloud Environments in the CompTIA Cloud+ material.

NEW QUESTION # 207

Department supervisors have requested a report that will help them understand the utilization of cloud resources, make decisions about budgeting for the following year, and reduce costs. Which of the following are the most important requisite steps to create the report? (Select two).

- A. Configure the collection of performance/utilization logs.
- B. Enable resource tagging.
- C. Configure metric threshold alerts.
- D. Configure application tracing.
- E. Integrate email alerts with ticketing software.
- F. Set the desired retention of resource logs.

Answer: A,B

Explanation:
To create a report that helps understand the utilization of cloud resources, make budget decisions, and reduce costs, the most important steps are to enable resource tagging and configure the collection of performance/utilization logs. Resource tagging helps in categorizing and tracking costs by associating tags with resources, while performance/utilization logs are essential for analyzing resource usage over time. NEW QUESTION # 208

A systems engineer is migrating a batch of 25 VMs from an on-premises compute cluster to a public cloud using the public cloud's migration agent. The migration job shows data copies at a rate of 250Mbps. After five servers migrate, the data copies at a rate of 25Mbps. Which of the following should the engineer review first to troubleshoot?

- A. The on-premises ISP throttling rate
- B. The on-premises VM host hardware utilization
- C. The compute utilization of the VMs being migrated
- D. The IOPS on the SAN backing the on-premises cluster

Answer: B

Explanation:
The engineer should review the on-premises VM host hardware utilization first. A decrease in transfer rate after a batch of migrations could suggest that the host hardware resources (like CPU, RAM, or network bandwidth) are becoming saturated, which would slow down additional migrations. Reference: CompTIA Cloud+ Certification Study Guide (Exam CV0-004) by Scott Wilson and Eric Vanderburg.

NEW QUESTION # 209

Which of the following are best practices when working with a source control system? (Select two).

- A. Initiating a pull request
- B. Merging code often
- C. Committing code often
- D. Maintaining one branch for all features
- E. Pushing code directly to production
- F. Performing code deployment

Answer: B,C

Explanation:
Best practices when working with a source control system include merging code often to ensure that changes from different team members are integrated regularly, reducing integration issues. Committing code often is also recommended to save small changes frequently, which helps in tracking changes and resolving issues more effectively.References: Source control system best practices are part of the software development and deployment guidelines discussed in the CompTIA Cloud+ examination objectives.

NEW QUESTION # 210
Which of the following cloud deployment models is the best way to replicate a workload non-disruptively between on-premises servers and a public cloud?

- A. Community
- B. Private
- C. Hybrid
- D. Public

Answer: C

Explanation:
A hybrid cloud deployment model is the best way to replicate workloads non-disruptively between on- premises servers and a public cloud. This model integrates on-premises infrastructure, or private clouds with public clouds, allowing data and applications to be shared between them.
