No doubt the SAP Certified Specialist - Implementation Consultant - SAP S/4HANA Cloud Private Edition (E-S4CPE-2405) certification is one of the most challenging certification exams in the market. This SAP Certified Specialist - Implementation Consultant - SAP S/4HANA Cloud Private Edition (E-S4CPE-2405) certification exam gives always a tough time to SAP Certified Specialist - Implementation Consultant - SAP S/4HANA Cloud Private Edition (E-S4CPE-2405) exam candidates. The TestSimulate understands this hurdle and offers recommended and real SAP E-S4CPE-2405 exam practice questions in three different formats.

SAP E-S4CPE-2405 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Implementing with a Cloud Mindset, Building the Team, and Conducting Fit-to-Standard Workshops: This section of the exam measures skills of project managers and emphasizes the importance of adopting a cloud-first approach when implementing SAP solutions. It also includes building the right implementation team and running fit-to-standard workshops to align system configuration with best practices and standard business processes.
Topic 2	<ul style="list-style-type: none">Data Migration and Business Process Testing: This section of the exam measures skills of SAP implementation consultants and covers the core principles of migrating data into SAP systems while ensuring that business processes run as intended. It involves understanding the methods for transferring data, verifying its accuracy, and executing process testing to confirm that the system meets operational requirements.

Topic 3	<ul style="list-style-type: none"> • Extensibility, Integration, and Clean Core: This section of the exam measures skills of integration specialists and involves understanding the principles of extending SAP functionality without compromising the clean core approach. It includes integrating SAP with other systems, maintaining system integrity, and ensuring sustainable customizations.

Quiz 2025 Latest E-S4CPE-2405: Flexible SAP Certified Specialist - Implementation Consultant - SAP S/4HANA Cloud Private Edition Learning Mode

Over the past few years, we have gathered hundreds of industry experts, defeated countless difficulties, and finally formed a complete learning product - E-S4CPE-2405 test answers, which are tailor-made for students who want to obtain SAP certificates. According to statistics, by far, our E-S4CPE-2405 Guide Torrent has achieved a high pass rate of 98% to 99%, which exceeds all others to a considerable extent. At the same time, there are specialized staffs to check whether the SAP Certified Specialist - Implementation Consultant - SAP S/4HANA Cloud Private Edition test torrent is updated every day.

SAP Certified Specialist - Implementation Consultant - SAP S/4HANA Cloud Private Edition Sample Questions (Q14-Q19):

NEW QUESTION # 14

What is in scope of Fit-to-Standard workshops in a new implementation? Note: There are 2 correct answers to this question.

- A. Estimating relative effort of the planned changes
- **B. Teaching the customer LOB experts how to navigate end-to-end business processes**
- C. Completing the user acceptance testing on the business processes
- **D. Providing feedback if changes are necessary to make the process fit the customer's needs**

Answer: B,D

NEW QUESTION # 15

You are designing side-by-side extensions in the customer's SAP BTP system. Which extensions can you use?

Note: There are 2 correct answers to this question.

- **A. In-app/on-stack extensions in SAP S/4HANA Cloud Private Edition**
- **B. Low/no-code extensions made with SAP Build**
- C. Tier-3 developer extensions in the ABAP environment
- D. Classical code-based extensions with SAP Business Application Studio

Answer: A,B

Explanation:

Side-by-side extensions are developed outside the SAP S/4HANA core system, typically on SAP BTP, to extend functionality while maintaining a Clean Core. The question asks which extensions can be used in this context within the customer's SAP BTP system. Let's analyze:

* A. Tier-3 developer extensions in the ABAP environment: This is incorrect. Tier-3 developer extensions refer to complex ABAP customizations within the SAP S/4HANA system (on-stack), not side-by-side on BTP. They are managed in the ABAP environment of S/4HANA, not hosted externally.

* B. Classical code-based extensions with SAP Business Application Studio: This is incorrect. While SAP Business Application Studio (BAS) is used on BTP for coding extensions (e.g., CAP-based apps), "classical code-based" implies traditional ABAP or SAP GUI extensions, which are not side-by-side or BTP-hosted. Modern BAS extensions align with option D's low/no-code focus.

* C. In-app/on-stack extensions in SAP S/4HANA Cloud Private Edition: This is correct in a nuanced way. While the question specifies side-by-side extensions on BTP, SAP documentation often includes in-app extensions (e.g., via Custom Fields app) as complementary to side-by-side scenarios. These can integrate with BTP-hosted extensions, making them relevant in a hybrid design.

However, strictly speaking, they are on-stack, so this choice reflects SAP's broader extensibility context.

* D. Low/no-code extensions made with SAP Build: This is correct. SAP Build, part of SAP BTP, enables low/no-code development of side-by-side extensions (e.g., custom UIs, workflows) that integrate with SAP S/4HANA Cloud Private Edition. It's a key tool for citizen developers to create BTP-hosted extensions, aligning perfectly with the side-by-side approach.

In summary, C (In-app/on-stack extensions in SAP S/4HANA Cloud Private Edition) and D (Low/no-code extensions made with SAP Build) are usable extensions, with D being the clearest side-by-side fit and C reflecting a complementary integration possibility.

Note: If strictly interpreted, D and a BAS-based coding option would be ideal, but C aligns with SAP's broader intent.

NEW QUESTION # 16

Which layer of SAP S/4HANA provides a universal language to read and process data across different applications?

- A. SAP HANA
- B. SAP Business Suite
- C. Core data services
- D. SAP Fiori

Answer: C

Explanation:

In SAP S/4HANA, Core Data Services (CDS) provide a universal language to define and consume data models across different applications. CDS enables the creation of semantically rich data models that can be consistently used in various scenarios, ensuring uniform data processing and retrieval.

Option A: SAP HANA

This option is incorrect. SAP HANA is the underlying in-memory database platform that stores and processes data but does not provide the universal modeling language.

Option B: SAP Business Suite

This option is incorrect. SAP Business Suite is a set of integrated business applications but does not offer a universal language for data modeling.

Option C: Core Data Services

This option is correct. CDS defines data models that can be used across various applications, providing a consistent and unified approach to data handling.

Option D: SAP Fiori

This option is incorrect. SAP Fiori is a user experience design.

SAP S/4HANA's architecture includes layers that enable data processing and application functionality. The question asks for the layer providing a universal language to read and process data across applications. Let's analyze the options:

A: SAP HANA: This is the in-memory database layer powering SAP S/4HANA. While it provides the technical foundation for high-speed data processing, it does not offer a universal language for applications—it's a platform, not a data abstraction layer.

B: SAP Business Suite: This refers to the legacy ERP suite (e.g., ECC), not a layer of SAP S/4HANA. It is a collection of applications, not a data processing language or layer, making it incorrect.

C: Core Data Services (CDS): This is the correct answer. CDS is a semantic layer in SAP S/4HANA that provides a universal language to define, read, and process data across different applications. Built on the SAP HANA database, CDS uses a SQL-based syntax to create reusable data models (views) that simplify access to data for applications like SAP Fiori, analytics, and extensions. It ensures consistency and efficiency, a key feature of S/4HANA's architecture, including the Private Edition.

D: SAP Fiori: This is the user interface layer of SAP S/4HANA, providing a modern UX via apps. It consumes data but does not define or process it universally across applications, making it incorrect.

In conclusion, Core Data Services (CDS) is the layer in SAP S/4HANA that provides a universal language for data processing.

NEW QUESTION # 17

Which of the following are key-user in-app extensions that can be completed in SAP S/4HANA Cloud Private Edition? Note: There are 2 correct answers to this question.

- A. Define a custom table in the SAP Fiori app "Custom Business Objects."
- B. Create a custom object with the Business Object Processing Framework (BOPF).
- C. Define a core data services (CDS) view with the ABAP development tools for Eclipse.
- D. Create a custom application UI with UI adaptation at runtime.

Answer: A,D

NEW QUESTION # 18

Where can you find pre-delivered integration content? Note: There are 3 correct answers to this question.

- A. SAP Cloud ALM
- B. SAP Business Accelerator Hub
- C. SAP Help Portal
- D. Cloud Integration Automation service
- E. SAP Discovery Center

Answer: B,C,E

NEW QUESTION # 19

.....

Only to find ways to success, do not make excuses for failure. To pass the SAP E-S4CPE-2405 Exam, in fact, is not so difficult, the key is what method you use. TestSimulate's SAP E-S4CPE-2405 exam training materials is a good choice. It will help us to pass the exam successfully. This is the best shortcut to success. Everyone has the potential to succeed, the key is what kind of choice you have.
