Dell Information Storage and Management Foundations v2 Exam Latest Materials are Highly Effective to Make Use of - Dumpexams

To do this you just need to pass D-ISM-FN-01 exam, which is quite challenging and demands thorough Dell Information Storage and Management Foundations v2 Exam (D-ISM-FN-01) exam preparation. For the complete, comprehensive and quick D-ISM-FN-01 Exam Preparation, the Dumpexams D-ISM-FN-01 Dumps questions are ideal. You should not ignore it and must try Dumpexams D-ISM-FN-01 exam questions for preparation today.

EMC Dell Information Storage and Management Foundations v2 Exam Sample Questions (Q39-Q44):

NEW QUESTION # 39

Question:

A storage administrator needs to track the performance and availability of storage components and services. Which storage management function would provide this information?

- A. Infrastructure discovery
- **B. Monitoring**
- C. Reporting
- D. Alerting

Answer: B

Explanation:

Monitoring is the ongoing process of observing and tracking the performance and availability of IT infrastructure, including:
Storage devices

File systems

Ports and connectivity

It helps ensure service levels are met and detect potential issues.

* Reporting: Summarizes data (often based on monitoring data).

* Alerting: Notifies of specific events or thresholds (also uses monitoring data).

* Infrastructure discovery: Detects and inventories devices.

NEW QUESTION # 40

Question:

A company is experiencing slow write performance on its RAID 6 array. What is the most likely cause of this performance bottleneck?

- A. Insufficient storage on the RAID controller
- **B. Write penalty associated with dual parity calculations**
- C. High read I/O load on the array
- D. Increased network latency between the server and the storage array

Answer: B

Explanation:

RAID 6 uses dual parity to provide fault tolerance, which requires additional calculations during write operations. This introduces a write penalty, as the system must compute and write two sets of parity data for each write operation, leading to slower write performance compared to other RAID levels.

* Insufficient storage on the RAID controller: Would affect storage capacity, not write performance.

* High read I/O load on the array: Impacts read performance, not write performance.

* Increased network latency: Affects data transfer times but not the internal write operations of the RAID array.

* Write penalty associated with dual parity calculations: The most likely cause of slow write performance in RAID 6.

NEW QUESTION # 41

Question:

A company is planning to implement an FC-NVMe SAN. Other than servers with NVMe HBAs, which two other components are required to build this type of SAN?

- **A. NVMe storage systems**
- B. A dedicated 100 Gb/s Ethernet network
- **C. FC-NVMe switches**
- D. Specialized NVMe-oF drivers on all servers
- E. Only NVMe SSDs in servers

Answer: A,C

Explanation:

To implement an FC-NVMe SAN (NVMe over Fibre Channel), you need:

NVMe storage systems that expose NVMe namespaces.

FC-NVMe capable switches that support the new NVMe protocol over Fibre Channel.

Servers with NVMe HBAs (already mentioned in the question).

* Option B: Ethernet networks are for NVMe-oF over TCP/RoCE, not FC-NVMe.

* Option E: These drivers are for TCP/RoCE, not FC transports.

NEW QUESTION # 42

Question:

What describes an incident in a storage infrastructure?

- A. Any event that prevents corrections of known errors
- **B. Unknown root cause of one or more disruptions to service**
- C. Any action that may impact the functionality of the system
- D. Support request to help access an IT resource

Answer: B

Explanation:

An incident is an unplanned disruption of a service or a reduction in its quality, often with an unknown root cause.

Incidents require immediate action to restore service.

Example: SAN switch port down, unexpected storage latency.

* Support requests are typically service requests, not incidents.

* Impact actions are more about changes, not incidents.

* Events preventing corrections might be problems, not incidents.

Reference: Dell Information Storage and Management Foundations 2023 Study Guide, Section: Incident Management Processes.

NEW QUESTION # 43

Question:

What is the role of the storage node in a backup architecture?

- A. To manage the backup
- **B. To organize and write data to the backup device**
- C. To perform data deduplication and compression
- D. To monitor the health of the backup infrastructure

Answer: B

Explanation:

A storage node is a component in a backup architecture that handles the actual data movement during the backup process:

It organizes the backup data stream.

It writes the data to the backup target (disk, tape, or cloud).

It does not manage policies or schedules (that's the role of the backup server or management console).

* Option A: Monitoring is done by the backup server or management tools.

* Option C: Backup management (scheduling, policies) is also handled by the backup server.

* Option D: Deduplication may be part of the process but is not the primary role of a storage node.
