Nowadays, seldom do the exam banks have such an integrated system to provide you a simulation test. You will gradually be aware of the great importance of stimulating the actual exam after learning about our D-ISM-FN-01 Study Tool. Because of this function, you can easily grasp how the practice system operates and be able to get hold of the core knowledge about the Dell Information Storage and Management Foundations v2 Exam exam. In addition, when you are in the real exam environment, you can learn to control your speed and quality in answering questions and form a good habit of doing exercise, so that you're going to be fine in the Dell Information Storage and Management Foundations v2 Exam exam.

EMC Dell Information Storage and Management Foundations v2 Exam Sample Questions (Q11-Q16):

NEW QUESTION # 11
Question:
What information is available in a capacity planning report for storage infrastructure?

- A. Current and historical performance information about IT components and operations
- B. Current and historical information about the utilization of storage, file systems, and ports
- C. Number of units of storage available, used, and the cost
- D. Equipment purchase dates, licenses, lease status, and maintenance records

Answer: B

Explanation:
Capacity planning reports in storage environments focus on:
* Utilization trendsof storage systems (e.g., used vs. available space)
* File system usage(volumes, file systems)
* Ports (SAN/NAS connections)
This enables proactive capacity management and ensures enough resources are available to meet future demands.

NEW QUESTION # 12
Question:
Which two interfaces does an OSD (Object Storage Device) gateway typically present to applications?

- A. HTTP and HTTPS
- B. File-based interfaces like NFS and CIFS
- C. SSH and SMB
- D. REST and SOAP APIs

Answer: D

Explanation:
OSD gateways provide access to object storage systems through APIs. The most common interfaces are:
* REST (Representational State Transfer): A stateless protocol using standard HTTP methods, widely used for web services.
* SOAP (Simple Object Access Protocol): A protocol for exchanging structured information in web services, using XML.
These APIs allow applications to interact with object storage systems over HTTP/HTTPS protocols.
* SSH and SMB: SSH is for secure shell access; SMB is for file sharing, not typically used for object storage.
* HTTP and HTTPS: These are transport protocols; while used by REST and SOAP, they are not interfaces themselves.
* NFS and CIFS: File-based interfaces, not used for object storage.

NEW QUESTION # 13
Question:
What is the function of a continuous data protection (CDP) appliance?

- A. Migrates deduplicated data from the source volume to the target volume during replication
- B. Intercepts writes to the production volume and splits each write into two copies
- C. Runs data protection software and manages replications within and across data centers
- D. Stores all data that has changed from the time the replication session started

Answer: B

Explanation:
ACDP appliancesits in the data path and:
Intercepts all writesto the production volume.
Splits each write into two copies: one goes to the production volume, the other to the replica volume.
Maintains a journal for point-in-time recovery.
* Option A/B/C: These are aspects of replication, but CDP's primary function is real-time interception and splitting of writes.

NEW QUESTION # 14
Question:
What describes an incident in a storage infrastructure?

- A. Support request to help access an IT resource
- B. Any event that prevents corrections of known errors
- C. Unknown root cause of one or more disruptions to service
- D. Any action that may impact the functionality of the system

Answer: C

Explanation:
Anincidentis anunplanned disruptionof a service or a reduction in its quality, often with anunknown root cause.
Incidents require immediate action to restore service.
Example: SAN switch port down, unexpected storage latency.
* Support requestsare typically service requests, not incidents.
* Impact actionsare more about changes, not incidents.
* Events preventing correctionsmight be problems, not incidents.
Reference:Dell Information Storage and Management Foundations 2023 Study Guide, Section: Incident Management Processes.

NEW QUESTION # 15
Question:
What method does FCIP use to transport Fibre Channel SAN data?

- A. FCIP separates LAN and FC SAN data and tunnels FC SAN data over IP networks.
- B. FCIP encapsulates and tunnels FC SAN data over IP networks.
- C. FCIP encapsulates and tunnels FC SAN data over Ethernet networks.
- D. FCIP splits LAN and FC SAN data and tunnels FC SAN data over Ethernet networks.

Answer: B

Explanation:
FCIP (Fibre Channel over IP) is a protocol used to connect Fibre Channel SANs across geographically dispersed locations over IP networks. It does this byencapsulating Fibre Channel frames into IP packets (Layer 3). This allows FC SAN traffic to be transmitted across IP-based WANs.
* Ethernet networks(Layer 2) are not involved in the FCIP encapsulation process directly because FCIP uses IP packets.
* Splitting LAN/SAN datais not the method used; FCIP encapsulatesall FC frames.
* Separating LAN and SAN dataalso does not describe the tunneling function.
