EMC Dell PowerFlex Implementation Achievement Sample Questions (Q13-Q18):

NEW QUESTION # 13

Which tool can be used to install the SDR component in a PowerFlex 4.x cluster?

- A. vSphere Plug-In
- B. PowerFlex WebUI
- **C. PowerFlex Manager**
- D. Installation Manager

Answer: C

Explanation:

The PowerFlex Manager is the tool specifically designed for managing and orchestrating the deployment of components, including

SDR (Storage Data Replication), in a PowerFlex 4.x environment.

* Purpose of PowerFlex Manager: PowerFlex Manager simplifies the implementation and lifecycle management of PowerFlex clusters. It includes workflows to install, configure, and upgrade components such as the SDR.

* Why Not the Other Options?

* vSphere Plug-In: This is used for managing and monitoring PowerFlex components within a vSphere environment but doesn't handle SDR installation.

* PowerFlex WebUI: This interface is used for day-to-day cluster management tasks but is not designed to install SDR components.

* Installation Manager: While it can assist with certain components during the setup process, it is not the dedicated tool for SDR installations.

References: Dell PowerFlex documentation specifies the use of PowerFlex Manager for orchestrating SDR installations. Consult the "PowerFlex Manager Deployment Guide" and "PowerFlex 4.x Administration Guide" for further details.

NEW QUESTION # 15

PowerFlex Management Controller VMs are being deployed. Once the OVAs have been successfully deployed, what should be done before powering them on?

- A. Add a second SCSI controller to all the PFMC 2.0 nodes.
- B. Upgrade the VM hardware version.
- C. Add a second vNIC to all the PFMC 2.0 nodes.
- D. Upgrade the version of VMware Tools.

Answer: C

Explanation:

Before powering on the PowerFlex Management Controller (PFMC) VMs, it is crucial to add a second vNIC (virtual NIC) to enable proper communication and management capabilities:

* Add a Second vNIC to PFMC 2.0 Nodes (Option C):

* The additional vNIC is required to handle the management traffic and ensure proper network segregation for various operations within the PowerFlex environment.

* Without the second vNIC, the management network might not function as intended, potentially causing communication issues between PowerFlex components.

* Why Not the Other Options?

* Option A: Upgrade the VM hardware version: The deployed OVAs are preconfigured with the required hardware version, and upgrading it is unnecessary unless specified by Dell's updated requirements.

* Option B: Add a second SCSI controller: There is no requirement to add a second SCSI controller for PFMC nodes, as storage configurations are pre-defined in the OVA.

* Option D: Upgrade the version of VMware Tools: The OVAs are pre-packaged with a compatible VMware Tools version, and an immediate upgrade is not required before powering on.
