The data that come up with our customers who have bought our Associate-Cloud-Engineer actual exam and provided their scores show that our high pass rate is 98% to 100%. This is hard to find and compare with in the market. And numerous enthusiastic feedbacks from our worthy clients give high praises not only on our Associate-Cloud-Engineer study torrent, but also on our sincere and helpful 24 hours customer services on Associate-Cloud-Engineer exam questions online. All of these prove that we are the first-class vendor in this career and have authority to ensure your success in your first try on Associate-Cloud-Engineer exam.

Deploying & Implementing Cloud Solutions

To answer the questions related to this domain, the examinees need to show that they know how to deploy and implement Compute Engine resources, Google Kubernetes Engine resources, App Engine resources, Cloud Run resources, and Cloud Functions resources. Moreover, they should have a good understanding of how to deploy and implement data solutions as well as networking resources. They also need to have the capacity to perform the deployment of a solution with the help of Cloud Marketplace. Additionally, their ability to perform the deployment of application infrastructure with the help of Cloud Deployment Manager is required.

Free PDF 2025 Google Efficient Reliable Associate-Cloud-Engineer Dumps Ebook

Unlike those impotent practice materials, our Associate-Cloud-Engineer study questions have salient advantages that you cannot ignore. They are abundant and effective enough to supply your needs of the Associate-Cloud-Engineer exam. Since we have the same ultimate goals, which is successfully pass the Associate-Cloud-Engineer Exam. So during your formative process of preparation, we are willing be your side all the time. As long as you have questions on the Associate-Cloud-Engineer learning braindumps, just contact us!

Google Associate Cloud Engineer Exam Sample Questions (Q293-Q298):

NEW QUESTION # 293

You are managing several Google Cloud Platform (GCP) projects and need access to all logs for the past 60 days. You want to be able to explore and quickly analyze the log contents. You want to follow Google- recommended practices to obtain the combined logs for all projects. What should you do?

- A. Navigate to Stackdriver Logging and select resource.labels.project_id="*"
- B. Create a Stackdriver Logging Export with a Sink destination to Cloud Storage. Create a lifecycle rule to delete objects after 60 days.
- **C. Create a Stackdriver Logging Export with a Sink destination to a BigQuery dataset. Configure the table expiration to 60 days.**
- D. Configure a Cloud Scheduler job to read from Stackdriver and store the logs in BigQuery. Configure the table expiration to 60 days.

Answer: C

Explanation:

Navigate to Stackdriver Logging and select resource.labels.project_id="*". is not right.

Log entries are held in Stackdriver Logging for a limited time known as the retention period which is 30 days (default configuration). After that, the entries are deleted. To keep log entries longer, you need to export them outside of Stackdriver Logging by configuring log sinks.

Ref: <https://cloud.google.com/blog/products/gcp/best-practices-for-working-with-google-cloud-audit-logging> Configure a Cloud Scheduler job to read from Stackdriver and store the logs in BigQuery. Configure the table expiration to 60 days. is not right.

While this works, it makes no sense to use Cloud Scheduler job to read from Stackdriver and store the logs in BigQuery when Google provides a feature (export sinks) that does exactly the same thing and works out of the box.

Ref: https://cloud.google.com/logging/docs/export/configure_export_v2

Create a Stackdriver Logging Export with a Sink destination to Cloud Storage. Create a lifecycle rule to delete objects after 60 days. is not right.

You can export logs by creating one or more sinks that include a logs query and an export destination.

Supported destinations for exported log entries are Cloud Storage, BigQuery, and Pub/Sub.

Ref: https://cloud.google.com/logging/docs/export/configure_export_v2

Sinks are limited to exporting log entries from the exact resource in which the sink was created: a Google Cloud project, organization, folder, or billing account. If it makes it easier to exporting from all projects of an organization, you can create an aggregated sink that can export log entries from all the projects, folders, and billing accounts of a Google Cloud organization.

Ref: https://cloud.google.com/logging/docs/export/aggregated_sinks

Either way, we now have the data in Cloud Storage, but querying logs information from Cloud Storage is harder than Querying information from BigQuery dataset. For this reason, we should prefer Big Query over Cloud Storage.

Create a Stackdriver Logging Export with a Sink destination to a BigQuery dataset. Configure the table expiration to 60 days. is the right answer.

You can export logs by creating one or more sinks that include a logs query and an export destination.

Supported destinations for exported log entries are Cloud Storage, BigQuery, and Pub/Sub.

Ref: https://cloud.google.com/logging/docs/export/configure_export_v2

Sinks are limited to exporting log entries from the exact resource in which the sink was created: a Google Cloud project, organization, folder, or billing account. If it makes it easier to exporting from all projects of an organization, you can create an aggregated sink that can export log entries from all the projects, folders, and billing accounts of a Google Cloud organization.

Ref: https://cloud.google.com/logging/docs/export/aggregated_sinks

Either way, we now have the data in a BigQuery Dataset. Querying information from a Big Query dataset is easier and quicker than analyzing contents in Cloud Storage bucket. As our requirement is to Quickly analyze the log contents, we should prefer Big Query over Cloud Storage.

Also, You can control storage costs and optimize storage usage by setting the default table expiration for newly created tables in a dataset. If you set the property when the dataset is created, any table created in the dataset is deleted after the expiration period. If you set the property after the dataset is created, only new tables are deleted after the expiration period.

For example, if you set the default table expiration to 7 days, older data is automatically deleted after 1 week.

NEW QUESTION # 294

You need a dynamic way of provisioning VMs on Compute Engine. The exact specifications will be in a dedicated configuration file.

You want to follow Google's recommended practices. Which method should you use?

- A. Cloud Composer
- B. Deployment Manager
- C. Unmanaged Instance Group
- D. **Managed Instance Group**

Answer: D

Explanation:

Explanation/Reference: <https://cloud.google.com/compute/docs/instances/>

NEW QUESTION # 295

You need to immediately change the storage class of an existing Google Cloud bucket.

You need to reduce service cost for infrequently accessed files stored in that bucket and for all files that will be added to that bucket in the future. What should you do?

- A. Use the gsutil to rewrite the storage class for the bucket.
Set up Object Lifecycle management on the bucket
- B. Use the gsutil to rewrite the storage class for the bucket.
Change the default storage class for the bucket
- C. Create a new bucket and change the default storage class for the bucket.
Set up Object Lifecycle management on lite bucket
- D. Create a new bucket and change the default storage class for the bucket import the files from the previous bucket into the new bucket

Answer: A

NEW QUESTION # 296

You are performing a monthly security check of your Google Cloud environment and want to know who has access to view data stored in your Google Cloud Project. What should you?

- A. Create a Data Loss Prevention job.
- B. Enable Audit Logs for all APIs that are related to data storage.
- C. **Review the IAM permissions for any role that allows for data access.**
- D. Review the Identity-Aware Proxy settings for each resource.

Answer: C

NEW QUESTION # 297

You have a development project with appropriate IAM roles defined. You are creating a production project and want to have the same IAM roles on the new project, using the fewest possible steps. What should you do?

- A. **Use gcloud iam roles copy and specify your organization as the destination organization.**
- B. In the Google Cloud Platform Console, use the 'create role' functionality and select all applicable permissions.
- C. Use gcloud iam roles copy and specify the production project as the destination project.
- D. In the Google Cloud Platform Console, use the 'create role from role' functionality.

Answer: A

NEW QUESTION # 298

.....

Practice tests (desktop and web-based) are simulations of actual Google Associate-Cloud-Engineer PDF Questions designed to help individuals prepare and improve their performance for the Google Associate-Cloud-Engineer certification test. TestInsides facilitates the customers with customizable practice tests which means they can adjust the number of questions and set the time of the

test according to themselves which will help them in order to feel the real-based exam pressure and control it.
