As we all know that if we get a certificate for the exam, we will have more advantages in the job market. We have C1000-130 study guide for you to get the certificate quickly. Besides, we are pass guarantee, if you indeed fail the exam, we will be money back guarantee. C1000-130 Study Guide of us obtain many good feedbacks from our customers. Free demo of C1000-130 exam dumps are provided by us, you can have a try before you buy them, so that you can know the mode of the C1000-130 learning materials.

IBM C1000-130 exam is designed for professionals who want to validate their knowledge and skills in administering the IBM Cloud Pak for Integration V2021.2. IBM Cloud Pak for Integration V2021.2 Administration certification is intended for those who have experience in deploying, configuring, and managing IBM Cloud Pak for Integration solutions. C1000-130 exam tests the candidates on a variety of topics, including installation and configuration, security and governance, troubleshooting, and performance tuning.

IBM C1000-130 (IBM Cloud Pak for Integration V2021.2 Administration) Certification Exam is an essential certification for professionals who want to demonstrate their expertise in administering IBM Cloud Pak for Integration V2021.2. IBM Cloud Pak for Integration V2021.2 Administration certification can help professionals advance their careers and open up new job opportunities in the field of integration and cloud computing.

100% Pass IBM - High Pass-Rate C1000-130 - Composite Test IBM Cloud Pak for Integration V2021.2 Administration Price

If you buy our C1000-130 exam questions, we will offer you high quality products and perfect after service just as in the past. We believe our consummate after-sale service system will make our customers feel the most satisfactory. Our company has designed the perfect after sale service system for these people who buy our C1000-130 practice materials. We can promise that we will provide you with quality products, reasonable price and professional after sale service on our C1000-130 learning guide.

IBM Cloud Pak for Integration V2021.2 is a platform that allows businesses to connect and integrate their applications, data, and APIs across on-premises, cloud, and hybrid environments. It provides a comprehensive set of integration capabilities, including API management, messaging, event streaming, and data integration. IBM Cloud Pak for Integration V2021.2 also offers a range of deployment options, including containerized deployments on Red Hat OpenShift, multi-cloud deployments, and edge deployments.

IBM Cloud Pak for Integration V2021.2 Administration Sample Questions (Q58-Q63):

NEW QUESTION # 58

Which service receives audit data and collects application logs in Cloud Pak Foundational Services?

- A. audit-syslog-service
- B. fluentd service
- C. systemd journal
- D. logging service

Answer: A

NEW QUESTION # 59

An administrator has to implement high availability for various components of a Cloud Pak for Integration installation. Which two statements are true about the options available?

- A. API management uses a quorum mechanism where components are deployed on a minimum of three failure domains.
- B. AppConnect can use a mix of mechanisms - like failover for stateful workloads and active/active deployments for stateless workloads
- C. DataPower gateway uses a Quorum mechanism where a global load balancer uses quorum algorithm to choose the active instance.
- D. Platform Navigator uses an Active/Active deployment, where the primary handles all the traffic and in case of failure of the primary, the load balancer will then route the traffic to the secondary.
- E. Queue Manager (MQ) uses Replicated Data Queue Manager (RDQM).

Answer: C,D

NEW QUESTION # 60

An administrator is installing Cloud Pak for Integration onto an OpenShift cluster that does not have access to the internet. How do they provide their ibm-entitlement-key when mirroring images to a portable registry?

- A. The administrator adds the entitlement-key to the properties file \$HOME/.airgap/registries on the Bastion Host.
- B. The administrator sets the key with "export ENTITLEMENTKEY" and then uses the "cloudPakOfflineInstaller -mirror-images" script to mirror the images
- C. The administrator uses a cloudctl case command to configure credentials for registries which require authentication before mirroring the images.
- D. The ibm-entitlement-key is added as a docker-registry secret onto the OpenShift cluster.

Answer: C

Explanation:

When installing IBM Cloud Pak for Integration (CP4I) on an OpenShift cluster that lacks internet access, an air-gapped installation is required. This process involves mirroring container images from an IBM container registry to a portable registry that can be accessed by the disconnected OpenShift cluster.

To authenticate and mirror images, the administrator must:

Use the `cloudctl case` command to configure credentials, including the IBM entitlement key, before initiating the mirroring process.

Authenticate with the IBM Container Registry using the entitlement key.

Mirror the required images from IBM's registry to a local registry that the disconnected OpenShift cluster can access.

Why Other Options Are Incorrect:

B . `export ENTITLEMENTKEY` and `cloudPakOfflineInstaller -mirror-images`

The command `cloudPakOfflineInstaller -mirror-images` is not a valid IBM Cloud Pak installation step.

IBM requires the use of `cloudctl case` commands for air-gapped installations.

C . Adding the entitlement key to `.airgap/registries`

There is no documented requirement to store the entitlement key in `SHOME/.airgap/registries`.

IBM Cloud Pak for Integration does not use this file for authentication.

D . Adding the `ibm-entitlement-key` as a Docker secret

While secrets are used in OpenShift for image pulling, they are not directly involved in mirroring images for air-gapped installations.

The entitlement key is required at the mirroring step, not when deploying the images.

IBM Cloud Pak for Integration (CP4I) v2021.2 Administration Reference:

IBM Documentation: Installing Cloud Pak for Integration in an Air-Gapped Environment IBM Cloud Pak Entitlement Key and Image Mirroring OpenShift Air-Gapped Installation Guide

NEW QUESTION # 61

What is one method that can be used to uninstall IBM Cloud Pak for Integration?

- A. Cloud Pak for Integration console
- B. `Uninstall.sh`
- C. Operator Catalog
- D. OpenShift console

Answer: D

NEW QUESTION # 62

Which two App Connect resources enable callable flows to be processed between an integration solution in a cluster and an integration server in an on-premise system?

- A. Connectivity agent
- B. Kafka sync
- C. Sync server
- D. Switch server
- E. Routing agent

Answer: A,E

Explanation:

In IBM App Connect, which is part of IBM Cloud Pak for Integration (CP4I), callable flows enable integration between different environments, including on-premises systems and cloud-based integration solutions deployed in an OpenShift cluster.

To facilitate this connectivity, two critical resources are used:

1. Connectivity Agent (☐ Correct Answer)

The Connectivity Agent acts as a bridge between cloud-hosted App Connect instances and on-premises integration servers.

It enables secure bidirectional communication by allowing callable flows to connect between cloud-based and on-premise integration servers.

This is essential for hybrid cloud integrations, where some components remain on-premises for security or compliance reasons.

2. Routing Agent (☐ Correct Answer)

The Routing Agent directs incoming callable flow requests to the appropriate App Connect integration server based on configured routing rules.

It ensures low-latency and efficient message routing between cloud and on-premise systems, making it a key component for hybrid integrations.

Why the Other Options Are Incorrect?
