Valid Talend-Core-Developer Practice Materials | Authorized Talend-Core-Developer Certification

These formats hold high demand in the market and offer a great solution for quick and complete Talend Core Certified Developer

Exam (Talend-Core-Developer) exam preparation. These formats are Talend-Core-Developer PDF dumps, web-based practice test software, and desktop practice test software. All these three Talend Core Certified Developer Exam (Talend-Core-Developer) exam questions contain the real, valid, and updated Talend Exams that will provide you with everything that you need to learn, prepare and pass the challenging but career advancement Talend-Core-Developer certification exam with good scores.

Talend Core Certified Developer Exam Sample Questions (Q23-Q28):

NEW QUESTION # 23

You built multiple Jobs in Studio, each uses its own tDBInput component to connect to a common database server, but they all use different credentials. How should you configure the tDBInput components?

- A. Set the Property type to Repository and replace the credentials in each component.
- B. Set the Database field to Metadata.
- C. Set the Property type to Repository and use a common DB connection metadata.
- **D. Set the Property type to Built-in and set all the relevant properties manually.**

Answer: D

Explanation:

Comprehensive and Detailed Explanation:

When multiple Jobs require connections to the same database server but with different credentials, the recommended approach is:

* Set the Property Type to Built-in and Set All the Relevant Properties Manually (Option C):

* In each tDBInput component, set the 'Property Type' to 'Built-in.'

* Manually enter the connection details, including the specific username and password required for that particular Job.

This approach ensures that each Job uses its own set of credentials, maintaining the necessary security and access controls.

NEW QUESTION # 24

How can you create REST API metadata in Talend Studio? Choose 2 answers.

- A. Import it from Talend API Tester.
- B. Import it from a JSON file.
- **C. Create it manually in Talend Studio.**
- **D. Import it from Talend API Designer.**

Answer: C,D

Explanation:

Comprehensive and Detailed Explanation:

In Talend Studio, REST API metadata can be created using the following methods:

* Create it manually in Talend Studio (Option A):

* Users can define REST API metadata within Talend Studio by manually specifying API structure, endpoints, HTTP methods, and parameters.

* This method provides full control over the API metadata but requires manual configuration.

* Import it from Talend API Designer (Option B):

* If an API has been designed using Talend API Designer, it can be imported into Talend Studio.

* This enables reusing the API design directly without manual recreation.

Why not other options?

* Option C (Import from JSON file): Talend Studio does not support direct import of REST API metadata from generic JSON files.

* Option D (Import from Talend API Tester): Talend API Tester is used for testing APIs but does not provide an option to import API definitions into Talend Studio.

NEW QUESTION # 25

Which operations can you perform using a tMap component? Choose 3 answers.

- **A. Transform data from single or multiple sources to single or multiple destinations.**
- B. Load single lookup tables only.
- **C. Perform full outer joins.**
- D. Reject data using inner join rejections.

- E. Map data using filters, constraints, and simple explicit joins.

Answer: A,C,E

Explanation:

Comprehensive and Detailed Explanation:

The tMap component in Talend allows for various data transformation and mapping operations. The correct operations include:

- * A. Map data using filters, constraints, and simple explicit joins.
- * tMap allows mapping fields between sources and destinations with filters and constraints.
- * B. Perform full outer joins.
- * Unlike tJoin, tMap supports full outer joins, allowing all records from both tables to be included.
- * C. Transform data from single or multiple sources to single or multiple destinations.
- * You can map multiple input sources to multiple output targets with transformations.

NEW QUESTION # 26

Which concepts are a part of Pipeline Designer? Choose 3 answers.

- A. Preparations
- B. Dataset
- C. Processor
- D. Context variables
- E. Connection

Answer: B,C,E

Explanation:

Comprehensive and Detailed Explanation:

Talend's Pipeline Designer is a tool that enables users to design and execute data integration workflows. Key components of Pipeline Designer include:

- * Connection (Option C):
- * Defines the link between Pipeline Designer and various data sources or destinations, specifying how to access and interact with external systems.
- * Dataset (Option D):
- * Represents the structured data that flows through the pipeline, serving as the input or output of various processing steps.
- * Processor (Option E):
- * Performs specific operations on the data within the pipeline, such as transformations, aggregations, or filtering, to achieve the desired data processing outcomes.

Why not other options?

- * Option A: While context variables are used in Talend Studio for parameterizing jobs, they are not a primary concept in Pipeline Designer.
- * Option B: "Preparations" refer to data transformation sequences in Talend Data Preparation, not directly in Pipeline Designer.

NEW QUESTION # 27

You need a list of all customers whose first name contains "Tom" and who are older than 18. Which processor should be used?

- A. Data sampling
- B. Aggregate
- C. Filter
- D. Join

Answer: C

Explanation:

Comprehensive and Detailed Explanation:

To filter customer records based on first name containing "Tom" and age greater than 18, the Filter processor is the correct choice.

- * The Filter processor allows users to set conditional rules to extract only the required data.

* Users can specify conditions such as:

first_name CONTAINS "Tom"

AND

age > 18

* This ensures that only relevant records are included in the output.

Why not other options?

* Option A (Join):Used to combine data from multiple datasets based on a key field, not for filtering.

* Option B (Aggregate):Used for summarizing data, such as calculating counts, sums, or averages.

* Option D (Data Sampling):Used to select a random subset of data, not for filtering based on conditions.

NEW QUESTION # 28

.....

Our Talend-Core-Developer dumps pdf vce is absolutely the right and valid study material for candidates who desired to pass the Talend-Core-Developer actual test. Now, please go and free download our Talend-Core-Developer practice demo first. The questions & answers of Talend-Core-Developer free demo are parts of the complete exam dumps, which can give you some reference to assess the valuable of the Talend-Core-Developer Training Material. In addition, there is one year time for the access of the updated Talend-Core-Developer practice dumps after purchase. You will get Talend-Core-Developer latest study pdf all the time for preparation.
