IBM from every sector are looking up certifications to boost their careers, Actual4dump offers you

Valid C1000-125 Exam Questions - IBM Exam C1000-125 Labs

If you buy the C1000-189 training files from our company, you will have the right to enjoy the perfect service. We have employed a lot of online workers to help all customers solve their problem. If you have any questions about the C1000-189 learning materials, do not hesitate and ask us in your anytime, we are glad to answer your questions and help you use our C1000-189 study questions well. We believe our perfect service will make you feel comfortable when you are preparing for your C1000-189 exam.

Two IBM C1000-189 practice tests of PracticeVCE (desktop and web-based) create an actual test scenario and give you a C1000-189 real exam feeling. These C1000-189 Practice Tests also help you gauge your IBM Certification Exams preparation and identify areas where improvements are necessary.

C1000-189 Latest Exam Discount & Reliable C1000-189 Exam Pattern

IBM certification C1000-189 exams has a pivotal position in the IT industry, and I believe that a lot of IT professionals agree with it. Passing IBM certification C1000-189 exam has much difficulty and needs to have perfect IT knowledge and experience. Because after all, IBM certification C1000-189 exam is an authoritative test to inspect examinees' IT professional knowledge. If you have got a IBM C1000-189 Certification, your IT professional ability will be approved by a lot of IT company. PracticeVCE also has a pivotal position in IT training industry. Many IT personnels who have passed IBM certification C1000-189 exam used PracticeVCE's help to pass the exam. This explains why PracticeVCE's pertinence training program is very effective. If you use the

training material we provide, you can 100% pass the exam.

IBM Instana Observability v1.0.277 Administrator - Professional Sample Questions (Q59-Q64):

NEW QUESTION # 59

Which two methods can Instana administrators use to create an API token?

- A. JSON Web tokens
- **B. Personal API tokens**
- C. Unit-specific API tokens
- D. Sensor-specific API token
- **E. Team API token**

Answer: B,E

Explanation:

IBM Instana supports two primary methods for creating API tokens necessary for secure automation and integration: Team API tokens and Personal API tokens. The official documentation states: "API tokens for REST API access can be generated either on a per-user (personal) basis, or at the team level for shared automation use." Personal tokens are created from the user profile menu and scoped to an individual's permissions, supporting traceability and revocation. Team tokens are created under team or group settings and represent organizational integrations or CI/CD pipeline automation. JSON Web Tokens (A) are an industry token standard but not a creation flow in Instana. Unit- or Sensor-specific tokens are not supported (C, D); all automation integrations must use Personal or Team tokens, which are easily managed and rotated via the web UI for improved security hygiene.

NEW QUESTION # 60

By default, which rate limit is applied to Instana API calls for per hour usage?

- **A. 5,000**
- B. 1,000
- C. 6,000
- D. 10,000

Answer: A

Explanation:

Instana sets API rate limits to ensure fair resource usage and platform stability across accounts. According to the IBM Instana Observability documentation, "The default rate limit for the Instana REST API is 5,000 calls per hour per account." This policy is enforced automatically; when an account's API activity reaches the limit, further requests are temporarily blocked until the next hour begins. This guards against accidental overload as well as malicious consumption, and is fundamental for multi-tenant operation. Organizations may request increases for large-scale use cases, but 5,000 per hour is the standard value pre-configured for all accounts. Instana recommends that automation and integrations are engineered to respect this quota, using exponential backoff and batching if needed. Values such as 10,000, 6,000, or 1,000 are not defaults, and modifying them requires special support intervention.

NEW QUESTION # 61

Which protocol does an agent use to send the data to the backend?

- A. FTP
- B. NFS
- C. SSH
- **D. HTTPS**

Answer: D

Explanation:

IBM Instana agents use HTTPS, the industry standard secure protocol, to transmit telemetry data to Instana's backend servers or clusters. Instana documentation says: "All agent-to-backend traffic is encrypted and transmitted via HTTPS, meeting data confidentiality and compliance requirements." The use of HTTPS prevents unauthorized data interception by using strong TLS

encryption on every packet exchanged between agent and backend, regardless of whether the deployment is on-premises or SaaS. FTP, SSH, and NFS are protocols for file transfer, system access, or storage mounting but are never used for telemetry transmission in Instana's architecture. Secure HTTP is essential for privacy by design, is policy-enforced, and supports audit-friendly observability in all supported Instana versions per IBM standards.

NEW QUESTION # 62

Which statement correctly describes the usage and migration options for the Self-Hosted Standard Edition?

- **A. It does not support data migration from the Self-Hosted Classic Edition.**
- B. It is only for new installations, but data can be migrated from a Self-Hosted Classic Edition.
- C. It is not intended for new installations, only for upgrades from the Self-Hosted Classic Edition.
- D. It can be used for both new installations and upgrades from any edition.

Answer: A

Explanation:

IBM's product migration matrix for Instana confirms strict usage boundaries between different self-hosted editions. The documentation clarifies: "Instana Self-Hosted Standard Edition does not support migration of data from the Self-Hosted Classic Edition." Each edition uses different architectural components, storage formats, and telemetry databases. Therefore, upgrading from Classic to Standard Edition requires a fresh install, without direct movement of monitoring history or historical configuration. Upgrades are only supported within the same product branch, ensuring compatibility and stability. Attempting migration from the Classic Edition is unsupported and risks operational deviation. Standard Edition can be newly installed but not upgraded from the Classic base, as per IBM's verified change and upgrade path guidance.

NEW QUESTION # 63

Which two steps are performed in preparation for migrating from a self-hosted single-node deployment to a multi-node deployment of Instana?

- A. Start the self-hosted Standard Edition on the current host.
- **B. On all the three hosts, configure private IP addresses.**
- **C. On the two new hosts, make sure to check the Kernel parameters.**
- D. Delete the disks from old host and move them to new host.
- E. On all the three nodes, configure Docker.

Answer: B,C

Explanation:

IBM's migration process for Instana specifies steps requisite for a successful transition from single-node to multi-node deployment. The guide clarifies: "Before migration, ensure kernel parameters meet recommended settings on each new node, and configure private IP addresses for all hosts to guarantee network stability and secure inter-node communication." Kernel parameter adjustment (C) involves tuning system limits and TCP behavior for high-availability performance. Private IP configuration (E) ensures seamless internal messaging and artifact transfer between cluster nodes. Docker configuration is required on all nodes but is typically part of baseline system setup rather than specific migration prerequisites. Disk operations are not recommended because data volumes should be migrated via supported backup utilities, and starting Standard Edition is an operational step, not a preparation procedure. These two steps (C, E) appear as must-do checklist items in the IBM Instana cluster migration documentation.

NEW QUESTION # 64

.....

With years of experience in compiling top-notch relevant IBM C1000-189 dumps questions, we also offer the IBM C1000-189 practice test (online and offline) to help you get familiar with the actual exam environment. Therefore, if you have struggled for months to pass IBM C1000-189 Exam, be rest assured you will pass this time with the help of our IBM C1000-189 exam dumps. Every C1000-189 exam candidate who has used our exam preparation material has passed the exam with flying colors.
