Free PDF Quiz ISO-IEC-27035-Lead-Incident-Manager - PECB Certified ISO/IEC 27035 Lead Incident Manager Fantastic High Passing Score

One of the key factors for passing the exam is practice. Candidates must use PECB ISO-IEC-27035-Lead-Incident-Manager practice test material to be able to perform at their best on the real exam. This is why ExamCost has developed three formats to assist candidates in their PECB ISO-IEC-27035-Lead-Incident-Manager Preparation. These formats include desktop-based PECB ISO-IEC-27035-Lead-Incident-Manager practice test software, web-based practice test, and a PDF format.

Many people now want to obtain the ISO-IEC-27035-Lead-Incident-Manager certificate. Because getting a certification can really help you prove your strength, especially in today's competitive pressure. The science and technology are very developed now. If you don't improve your soft power, you are really likely to be replaced. Our ISO-IEC-27035-Lead-Incident-Manager Exam Preparation can help you improve your uniqueness. And our ISO-IEC-27035-Lead-Incident-Manager study materials contain the most latest information not only on the content but also on the displays.

New ISO-IEC-27035-Lead-Incident-Manager Exam Bootcamp & ISO-IEC-27035-Lead-Incident-Manager Updated Dumps

Learning is sometimes extremely dull and monotonous, so few people have enough interest in learning, so teachers and educators have tried many ways to solve the problem. Research has found that stimulating interest in learning may be the best solution. Therefore, the ISO-IEC-27035-Lead-Incident-Manager prepare guide' focus is to reform the rigid and useless memory mode by changing the way in which the ISO-IEC-27035-Lead-Incident-Manager Exams are prepared. ISO-IEC-27035-Lead-Incident-Manager practice materials combine knowledge with the latest technology to greatly stimulate your learning power. By simulating enjoyable learning scenes and vivid explanations, users will have greater confidence in passing the qualifying exams.

PECB ISO-IEC-27035-Lead-Incident-Manager Exam Syllabus Topics:

Topic	Details

Topic 1	• Implementing incident management processes and managing information security incidents: This section of the exam measures skills of Information Security Analysts and covers the practical implementation of incident management strategies. It looks at ongoing incident tracking, communication during crises, and ensuring incidents are resolved in accordance with established protocols.
Topic 2	• Designing and developing an organizational incident management process based on ISO • IEC 27035: This section of the exam measures skills of Information Security Analysts and covers how to tailor the ISO • IEC 27035 framework to the unique needs of an organization, including policy development, role definition, and establishing workflows for handling incidents.
Topic 3	• Preparing and executing the incident response plan for information security incidents: This section of the exam measures skills of Incident Response Managers and covers the preparation and activation of incident response plans. It focuses on readiness activities such as team training, resource allocation, and simulation exercises, along with actual response execution when incidents occur.
Topic 4	• Fundamental principles and concepts of information security incident management: This section of the exam measures skills of Information Security Analysts and covers the core ideas behind incident management, including understanding what constitutes a security incident, why timely responses matter, and how to identify the early signs of potential threats.

PECB Certified ISO/IEC 27035 Lead Incident Manager Sample Questions (Q65-Q70):

NEW QUESTION # 65
Which action is NOT involved in the process of improving controls in incident management?

- A. Updating the incident management policy
- B. Implementing new or updated controls
- C. Documenting risk assessment results

Answer: C

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
Improving controls in incident management is a proactive activity focused on directly adjusting and strengthening existing defenses. As per ISO/IEC 27035-2:2016, Clause 7.4, this process typically involves identifying deficiencies, updating or implementing new technical or procedural controls, and revising policies.
While risk assessments inform control decisions, simply documenting their results does not constitute direct improvement of controls. Hence, Option A is not part of the control improvement process itself.
Reference:
ISO/IEC 27035-2:2016 Clause 7.4: "Actions to improve controls include analyzing causes of incidents and updating procedures and policies accordingly." Correct answer: A
-

NEW QUESTION # 66
What is a crucial element for the effectiveness of structured information security incident management?

- A. Technical expertise alone
- B. Awareness and participation of all organization personnel
- C. Outsourcing incident management to third-party vendors

Answer: B

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
While technical expertise is essential, ISO/IEC 27035 emphasizes that structured incident management must be supported by the

awareness and active participation of all personnel across the organization. Effective incident response is not confined to technical teams; human factors-such as early detection, proper escalation, and policy adherence-require engagement from users, management, and third-party stakeholders.
Clause 6.3 of ISO/IEC 27035-1:2016 specifically highlights that staff awareness is critical. Personnel should understand their role in reporting suspicious activity, following defined procedures, and participating in readiness exercises.
Outsourcing (Option C) may support capacity, but it is not a substitute for internal preparedness, awareness, and governance.
Reference Extracts:
ISO/IEC 27035-1:2016, Clause 6.3: "All staff should be aware of their responsibilities in reporting and managing information security incidents." ISO/IEC 27001:2022, Control 6.3 and A.6.3.1: "Information security responsibilities must be communicated to and accepted by all personnel." Correct answer: B
-

NEW QUESTION # 67
What is the purpose of monitoring behavioral analytics in security monitoring?

- A. To establish a standard for normal user behavior and detect unusual activities
- B. To evaluate the effectiveness of security training programs
- C. To prioritize the treatment of security incidents

Answer: A

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
Behavioral analytics refers to using baselines of user or system behavior to identify anomalies that may indicate potential threats. According to ISO/IEC 27035-2, behavioral monitoring is an essential proactive technique for detecting insider threats, account compromise, and lateral movement by attackers.
Once a baseline for "normal behavior" is established (e.g., login patterns, file access, network usage), deviations can trigger alerts or investigations. This allows earlier detection of suspicious activities before they escalate into full-blown incidents.
Option A is a separate initiative related to awareness programs. Option B is more aligned with the response phase, not monitoring.
Reference:
ISO/IEC 27035-2:2016, Clause 7.3.2: "Security monitoring should include behavioral analysis to detect anomalies from baseline user and system activity." Correct answer: C
-

NEW QUESTION # 68
How is the impact of an information security event assessed?

- A. By determining if the event is an information security incident
- B. By evaluating the effect on the confidentiality, integrity, and availability of information
- C. By identifying the assets affected by the event

Answer: B

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
The impact of an information security event is assessed by evaluating how the event affects the CIA triad- Confidentiality, Integrity, and Availability-of information assets. This fundamental concept underpins all ISO/IEC 27000-series standards, including ISO/IEC 27035.
ISO/IEC 27035-1:2016, Clause 6.2.3 explicitly states that an event's severity and urgency are to be assessed by evaluating its actual or potential impact on the organization's information security objectives, namely:
Confidentiality: Protection from unauthorized disclosure
Integrity: Protection from unauthorized modification
Availability: Assurance of timely and reliable access
This approach ensures consistent and risk-based decision-making during incident assessment. Options A and B are important steps, but they are part of the broader process; they do not directly measure impact.
Reference:
ISO/IEC 27035-1:2016, Clause 6.2.3: "The impact should be assessed based on the effect on confidentiality, integrity, and availability of the information assets affected." Correct answer: C
-

NEW QUESTION # 69
What is a key responsibility of the incident response team?

- A. Investigating and managing cybersecurity incidents
- B. Maintaining physical security infrastructure
- C. Performing vulnerability scans and penetration testing

Answer: A

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
The primary role of an incident response team, according to ISO/IEC 27035-2:2016, is to manage and respond to information security incidents effectively. This includes tasks such as identifying, analyzing, containing, mitigating, and recovering from incidents. The goal is to minimize the impact on the organization and restore normal operations as quickly as possible.
Key responsibilities include:
Incident detection and validation
Impact assessment
Coordination of containment and eradication efforts
Communication with stakeholders
Post-incident analysis and lessons learned
While vulnerability scanning and penetration testing (option C) are important security functions, they are typically assigned to the security operations team or dedicated assessment teams - not the incident response team per se. Likewise, maintaining physical infrastructure (option A) is the responsibility of facilities management or physical security teams, not the incident response team.
Reference Extracts:
ISO/IEC 27035-2:2016, Clause 5.2 - "The incident response team is responsible for analyzing, responding to, and resolving incidents." NIST SP 800-61r2 (Computer Security Incident Handling Guide) - "An incident response team handles the investigation and resolution of security incidents." Therefore, the correct answer is B: Investigating and managing cybersecurity incidents.Question
Certainly!

NEW QUESTION # 70

ExamCost delivers up to date ISO-IEC-27035-Lead-Incident-Manager exam products and modify them time to time. Latest ISO-IEC-27035-Lead-Incident-Manager exam questions are assembled in our practice test modernizes your way of learning and replaces the burdensome preparation techniques with flexible learning. We accord you an actual exam environment simulated through our practice test sessions that proves beneficial for ISO-IEC-27035-Lead-Incident-Manager Exams preparation. Our ISO-IEC-27035-Lead-Incident-Manager practice tests provide you knowledge and confidence simultaneously. Candidates who run across the extensive search, ExamCost products are the remedy for their worries. Once you have chosen for our ISO-IEC-27035-Lead-Incident-Manager practice test products, no more resources are required for exam preparation.
