### **DSCI Certified Privacy Lead Assessor DCPLA certification Sample Questions (Q54-Q59):**

#### **NEW QUESTION # 54**

Which of the following are key contributors that would enhance the complexity in implementing security measures for protection of personal information? (Choose all that apply.)

- A. Evolution of nimble and flexible business processes affecting access management
- B. Regulatory requirements to issue privacy notice and data breach notification in specified format
- C. Data collection through multiple modes and channels
- D. None of the above

**Answer: A,C**

Explanation:

The complexity of implementing data security for personal information is often influenced by operational and architectural factors such as:

- \* A: Collecting data through various channels like web forms, mobile apps, customer support, etc., which introduces complexity in tracking and securing each channel.
- \* B: Flexible and dynamic business processes that evolve rapidly can complicate access management due to frequent changes in user roles, workflows, and data access needs.

While regulatory requirements (C) do impact privacy governance, they do not directly contribute to the complexity of implementing technical security measures.

#### **NEW QUESTION # 55**

Arrange the following techniques in decreasing order of the risk of re-identification:

- I) Pseudonymization
- II) De-identification
- III) Anonymization

- A. I, II
- B. All have equal risk of re-identification
- C. II, III, I
- D. III, II, I

**Answer: C**

#### **NEW QUESTION # 56**

From the following list, identify the technology aspects that are specially designed for upholding privacy:

- I) Data minimization
- II) Intrusion prevention system
- III) Data scrambling
- IV) Data loss prevention
- V) Data portability
- VI) Data obfuscation
- VII) Data encryption
- VIII) Data mirroring

- A. Only I, III, IV, VI and VII
- B. Only I, III, V, VII and VIII

- C. Only II, V, VI, VII and VIII
- D. Only I, II, III, VII and VIII

**Answer: A**

Explanation:

Privacy-enhancing technologies (PETs) are critical for operationalizing privacy principles. According to the DPF©:

- \* Data minimization (I): Collect only necessary data
- \* Data scrambling (III), Obfuscation (VI), and Encryption (VII): Techniques to protect identity and data content
- \* Data loss prevention (IV): Prevent unauthorized sharing or leakage

Data mirroring and intrusion prevention systems are primarily security mechanisms and not specifically privacy-focused. Data portability, while a right, is not a technology per se for "upholding" privacy but for enabling user control.

Thus, C includes the most appropriate privacy technologies.

**NEW QUESTION # 57**

Classify the following scenario as major or minor non-conformity.

"The organization is aware of the PI dealt by it at a broad level based on the business services provided but does not have the detailed view of which business functions, processes or relationships deal with what types of PI including usage, access, transmission, storage, etc."

- **A. Major**
- B. None of the above
- C. Minor
- D. Both Major and Minor

**Answer: A**

Explanation:

This scenario represents a major non-conformity under DAF#P. Lack of detailed visibility into personal information across business functions and processes suggests a foundational weakness in the privacy program.

This absence of specific knowledge impairs risk assessment, control implementation, and compliance alignment - key elements for a robust privacy framework.

**NEW QUESTION # 58**

Which of the following activities form part of an organization's Visibility over Personal Information (VPI) initiative, according to DSCI Privacy Framework (DPF)?

- A. 'Data processing environment' analysis of the organization only
- **B. 'Data processing environment' analysis of the organization and associated third parties**
- C. 'Data processing environment' analysis of industry peers
- D. 'Data processing environment' analysis of the country

**Answer: B**
