

# Free PDF Quiz Marvelous NCP-MCI-6.10 - Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI v6.10) Valid Exam Vce Free

2025 Latest ActualPDF NCP-MCI-6.10 PDF Dumps and NCP-MCI-6.10 Exam Engine Free Share:  
<https://drive.google.com/open?id=1euhTiJKYTXmChHYdv1XA3ydFpaMvck4>

Obtaining the certification may be not an easy thing for some candidates. If you choose us, we can help you pass the exam and obtain corresponding certification easily. NCP-MCI-6.10 learning materials are edited by professional experts, and you can use them at ease. Furthermore, NCP-MCI-6.10 exam braindumps have the most of the knowledge points for the exam, and you can learn a lot in the process of learning. We offer you free update for 365 days after payment for NCP-MCI-6.10 Exam Dumps, and our system will send you the latest version automatically. We have online and offline service, if you have any questions, you can consult us.

Everyone wants to have a good job and decent income. But if they don't have excellent abilities and good major knowledge they are hard to find a decent job. Passing the test NCP-MCI-6.10 certification can make you realize your dream and find a satisfied job. Our NCP-MCI-6.10 study materials are a good tool that can help you pass the NCP-MCI-6.10 Exam easily. You needn't spend too much time to learn it. Our NCP-MCI-6.10 exam guide is of high quality and if you use our product the possibility for you to pass the NCP-MCI-6.10 exam is very high as 99% to 100%.

>> NCP-MCI-6.10 Valid Exam Vce Free <<

## All Three ActualPDF Nutanix NCP-MCI-6.10 Exam Dumps Format is Ready for Download

Our product boosts many advantages and varied functions to make your learning relaxing and efficient. The client can have a free download and tryout of our NCP-MCI-6.10 exam torrent before they purchase our product and can download our study materials immediately after the client pay successfully. NCP-MCI-6.10 exam question provides the free update and the discounts for the old client and our experts check whether our test bank has been updated on the whole day and if there is the update the system will send the update automatically to the client. Thus you can have an efficient learning and a good preparation of the exam. It is believed that our NCP-MCI-6.10 latest question is absolutely good choices for you

## Nutanix NCP-MCI-6.10 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Configure Disaster Recovery and Data Protection within a Nutanix Multicloud Environment: This section of the exam measures the skills of Disaster Recovery Specialists and Cloud Engineers and covers configuring protection policies and domains for data security and recovery. Candidates need to identify the right entities for protection, schedule backups, define retention policies, and set up replication to remote sites. Recovery plans must be configured and executed with proper scripting, network mapping, and failover strategies. Metro replication requires understanding failover methodologies, comparing solutions on different hypervisors, and preventing split-brain scenarios. Effective disaster recovery planning ensures minimal downtime and data integrity across environments.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• Manage Clusters within a Nutanix Multicloud Environment: This section of the exam measures the skills of Infrastructure Engineers and Systems Administrators and covers the administration of Nutanix clusters. Storage management includes creating, reading, updating, and deleting storage containers and volume groups. Configuring AOS and Prism Central settings involves authentication, SSL certificate management, IAM role-based access control, and configuring network segmentation. Network administration procedures focus on creating VLAN-backed subnets, virtual switches, and load-balancing policies while monitoring NIC usage. Lifecycle management includes performing hardware and software updates and maintaining firmware. Hardware maintenance involves adding or removing nodes and physical disks while ensuring proper upgrades and replacements. Intelligent operations require configuring capacity policies, discovering application relationships, and simulating scenarios to optimize performance.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• Manage VMs within a Nutanix Multicloud Environment: This section of the exam measures the skills of Cloud Administrators and Virtualization Engineers and covers managing virtual machines (VMs) within a Nutanix multicloud environment. It includes creating and updating VMs by determining hardware requirements, boot modes, sizing, and configuration based on application needs. Candidates must understand how to deploy VMs using templates, snapshots, and image configurations, ensuring the correct formats for importing and exporting VMs. Migration processes require knowledge of prerequisites, storage, network settings, and software compatibility. Additionally, configuring VM categories and attributes is essential for proper organization and management within the environment, ensuring alignment with labels, storage policies, and security settings.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>• Conduct Custom Monitoring within a Nutanix Multicloud Environment: This section of the exam measures the skills of Cloud Analysts and Systems Engineers and covers custom monitoring for optimized performance management. Candidates must analyze performance charts, set retention policies, create custom service level agreements (SLAs), and manage storage based on policies. Creating reports involves identifying the required type, selecting generation frequency, determining retention properties, and customizing report formats for different monitoring needs. Effective monitoring ensures better resource utilization, system efficiency, and proactive issue resolution within the multi-cloud environment.</li></ul>
Topic 5	<ul style="list-style-type: none"><li>• Troubleshoot a Nutanix Multicloud Environment: This section of the exam measures the skills of Technical Support Engineers and IT Operations Specialists and covers diagnosing and resolving common issues within a Nutanix multi-cloud environment. Troubleshooting protection policies and recovery plans requires identifying network mapping failures, vNIC issues, script execution problems, and connectivity failures. Metro replication troubleshooting involves addressing naming conventions, network limitations, and replication states. Security issues in AOS and Prism Central must be resolved by managing CVM communications, security warnings, and log analysis. LCM operations require diagnosing failures in inventory updates and version upgrades. Performance troubleshooting involves analyzing logs, reading performance charts, and adjusting VM configurations to meet performance needs.</li></ul>

## Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI v6.10) Sample Questions (Q73-Q78):

### NEW QUESTION # 73

An administrator is preparing for a firmware upgrade on a host and wants to manually migrate VMs before executing the LCM upgrade. However, one VM is unable to migrate while others migrate successfully.

Which action would fix the issue?

- A. Enable Acropolis Dynamic Scheduling (ADS) at the cluster level.
- B. Configure backplane port groups that are assigned to the CVM.
- C. Update Link Layer Discovery Protocol (LLDP).
- **D. Disable Agent VM within the VM configuration options.**

**Answer: D**

Explanation:

If a VM is unable to migrate, the most likely cause is that it is an Agent VM (such as a Nutanix Witness VM or a VM with special dependencies).

\* Option C (Disable Agent VM) is correct:

\* Some Agent VMs are configured to prevent migration due to critical roles (e.g., a Witness VM for Metro Availability).

\* Disabling Agent VM restrictions allows it to migrate before a host enters maintenance mode.

\* Option A (Enable ADS) is incorrect:

\* Acropolis Dynamic Scheduling (ADS) helps with VM placement after migration, but it does not force an unmigratable VM to move.

\* Option B (Update LLDP) is incorrect:

\* LLDP is used for network discovery, but it does not impact VM migration behavior.

\* Option D (Configure backplane port groups) is incorrect:

\* Backplane settings impact CVM communication, not VM migration.

References:

\* Nutanix Prism Element Guide #Managing Agent VM Settings

\* Nutanix Bible #Host Maintenance and VM Live Migration

\* Nutanix KB #Troubleshooting VM Migration Failures in AHV

#### NEW QUESTION # 74

What happens when a VM is associated with multiple VM-Host affinity policies?

- **A. The newest policy takes precedence.**
- B. The VM is automatically removed from all policies.
- C. All policies are applied simultaneously.
- D. The oldest policy is applied

**Answer: A**

#### NEW QUESTION # 75

An administrator has successfully configured Metro Availability for a Protection Domain. However, after a few days, an NCC warning is raised:

"Following VMs are accessing data from remote clusters: VM-1 from remote cluster Remote-ML" What is the first action an administrator must take to fix the issue?

- A. Run the command:  
`ncli pd list metro-avail=true | egrep "Protection Domain Stretch Role" | grep "ACTIVE"`
- B. Use must-affinity rule to avoid automated VM migration to the standby datastore.
- C. Run the command:  
`ncc health_checks metro_availability_checks data_locality_check --cvm_list=X.X.X.20`
- **D. Migrate the VM to its primary site and set appropriate rules for DRS and affinity.**

**Answer: D**

Explanation:

Metro Availability requires that VMs always read data from their primary site to maintain optimal performance and prevent remote data access latency.

\* Option C (Migrate the VM to its primary site and set appropriate rules) is correct:

\* If a VM fails over to the secondary site but is still running in the primary site, it will read data remotely, causing high latency and performance issues.

\* The solution is to migrate the VM back to the primary site and configure DRS rules or host affinity settings to prevent unwanted movement.

- \* Option A is incorrect:
- \* The command lists active Metro Availability protection domains but does not resolve the issue.
- \* Option B is incorrect:
- \* Must-affinity rules can help, but they should be configured after migrating the VM back to the primary site.
- \* Option D is incorrect:
- \* Running NCC health checks will only diagnose the issue, not resolve it.

References:

- \* Nutanix Bible #Metro Availability and Data Locality

- \* Nutanix KB #Troubleshooting Remote Data Access in Metro Availability

### NEW QUESTION # 76

After upgrading Prism Central from PC2022.1 to PC2024.1, an administrator is unable to log in with their IAM domain account. What is the first troubleshooting step the administrator should take?

- A. Ensure port 9441 is open in the firewall.
- B. Validate the trusted signing certificate of the organization.
- C. Log in with a local admin account.
- D. Ping the Domain Controller from the CVM.

**Answer: C**

Explanation:

After a Prism Central upgrade, IAM authentication settings may require reconfiguration.

- \* Option D (Log in with a local admin account) is correct:
- \* If IAM authentication fails, the local admin account must be used to check domain settings.
- \* Option A (Ping the Domain Controller) is incorrect:
- \* Network connectivity is important, but the issue is likely related to IAM settings, not network reachability.
- \* Option B (Check firewall port 9441) is incorrect:
- \* Port 9441 is used for SSO authentication, but port issues usually result in login delays, not complete failures.
- \* Option C (Validate signing certificate) is incorrect:
- \* While certificates can cause issues, local admin login should always work.

References:

- \* Nutanix KB #Troubleshooting IAM Login Issues After a Prism Central Upgrade
- \* Nutanix Documentation #Managing User Authentication and IAM Integration

### NEW QUESTION # 77

In a five-node cluster, an administrator noticed that three VMs are consuming too many resources on a single host.

Acropolis Dynamic Scheduling (ADS) is not able to migrate these VMs.

What is the most likely reason preventing ADS from migrating these VMs?

- A. VM-VM anti-affinity policy is set.
- B. VMs use external Network Attached Storage.
- C. VMs use a Volume Group.
- D. VMs use GPU pass-through.

**Answer: D**

Explanation:

VMs using GPU pass-through cannot be live-migrated because they are directly tied to a physical GPU on a specific host.

- \* Option B (VMs use GPU pass-through) is correct:
- \* Pass-through devices (such as GPUs) are directly assigned to VMs, making migration impossible unless the VM is powered off first.
- \* Option A (VMs use a Volume Group) is incorrect:
- \* Volume Groups support live migration unless they are configured incorrectly.
- \* Option C (VM-VM anti-affinity) is incorrect:
- \* Anti-affinity rules prevent two specific VMs from running together, but do not prevent migration.
- \* Option D (VMs use external NAS) is incorrect:
- \* Using NAS does not block VM migration, as Nutanix supports shared storage across hosts.

## NEW QUESTION # 78

.....

Therefore, you must stay informed as per these changes to save time, money, and mental peace. As was already discussed, ActualPDF satisfies the needs of Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI v6.10) (NCP-MCI-6.10) exam candidates. The customer will receive updates of Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI v6.10) (NCP-MCI-6.10) real dumps for up to 365 days after buying the product. Our offers don't stop here. If our customers want to evaluate the Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI v6.10) (NCP-MCI-6.10) exam dumps before paying us, they can download a free demo as well.
