Study CLT Center, CLT Boot Camp

Our CLT exam materials are the most reliable products for customers. If you need to prepare an exam, we hope that you can choose our CLT study guide as your top choice. In the past ten years, we have overcome many difficulties and never give up. And we have quickly grown up as the most influential company in the market. And our CLT preparation questions are the most popular among the candidates.

MSSC Certified Logistics Technician (CLT) 4.0 Sample Questions (Q71-Q76):

NEW QUESTION # 71

Which transportation mode is typically used for low-weight, high-value products such as electronics and jewelry?

- A. Truck
- B. Rail
- C. Air

- D. Water

Answer: C

Explanation:

Air transportation provides the fastest transit times and highest security, making it the preferred mode for low-weight, high-value, and time-sensitive products like electronics, pharmaceuticals, or jewelry. According to CLT 4.0, air freight is ideal when delivery speed outweighs cost concerns, as it minimizes exposure to loss or damage through reduced handling and transit duration. However, air is also the most expensive per-unit cost mode, limited by size and weight constraints. Air shipments typically integrate with just-in-time (JIT) and lean supply chains where quick replenishment is vital. Trucking often handles short-haul distribution; water offers low cost but slow speed; and rail suits heavy, bulk freight. Hence, CLT stresses selecting modes based on balancing cost, time, value density, and customer service needs.

NEW QUESTION # 72

Which of the following methods for securing a load requires trailers that have interior rails?

- A. cargo wall
- B. straps
- C. rope
- D. airbags

Answer: A

Explanation:

A cargo wall (also known as a load bar or load lock) is a rigid securing device that locks into interior rails within a trailer. CLT "Packaging and Shipment" guidelines explain that it is used to create barriers or partitions to prevent freight from shifting during transit. This system is ideal for mixed or partial loads and requires trailers equipped with E-track or A-track rail systems. Ropes, straps, and airbags are flexible restraints that can be used in any trailer, but they do not create fixed structural separation. Cargo walls provide mechanical stability, ensuring weight distribution compliance and protecting goods and drivers from shifting loads. CLT standards stress proper placement, inspection, and use of load securement devices to maintain DOT and OSHA transport safety compliance.

NEW QUESTION # 73

The shipping papers for hazardous materials must contain all of the following EXCEPT

- A. emergency phone numbers and addresses
- B. text in English
- C. legible or mechanical print
- D. basic description of the hazardous material

Answer: B

Explanation:

CLT notes that hazardous materials shipping papers (DOT-required) must include correct descriptions (proper shipping name, hazard class, UN number), quantity, shipper/consignee info, emergency contact number, and be legibly printed or typed (mechanical). The requirement is primarily English for U.S. domestic shipments; many rules require English and Spanish, but the core regulatory requirement is legibility, not necessarily exclusively English text. Thus "text in English" is not an unconditional exception, but among those listed, "text in English" is the least direct regulatory requirement compared to accurate description, emergency contact, and legibility.

NEW QUESTION # 74

Which of the following is a method used by logistics companies to reduce mistakes in logistics records caused by human entry error?

- A. following up with customer on their satisfaction levels
- B. automating the data entry and retrieval process
- C. eliminating automated retrieval process and replacing with human retrieval options
- D. hiring quality control personnel to inspect every order prior to shipping

Answer: B

Explanation:

The CLT "Inventory Control and Data Accuracy" standards emphasize automation of data entry and retrieval processes as the most effective method to reduce human error in logistics records. Automation integrates barcode scanning, RFID, and WMS systems to capture real-time data directly from material handling activities. This minimizes manual input errors such as miscounts or transposed digits. Automated data collection improves traceability, accelerates information flow, and supports immediate decision-making across the supply chain. While quality inspections remain necessary, relying solely on human verification is inefficient. CLT stresses that technology-driven accuracy enhances performance, lowers rework costs, and ensures that records reflect true inventory positions, enabling precise forecasting and order fulfillment.

NEW QUESTION # 75

Which of the following statements is an example of ways to reduce the cost of transportation?

- A. increase number of shipments
- B. increase the number of pickups
- C. increase the number of parcels
- **D. increase consolidation of shipments**

Answer: D

Explanation:

CLT emphasizes that transportation cost is reduced by increasing load utilization and reducing the number of shipments. Shipment consolidation means combining smaller shipments into full loads-lower per-unit cost, fewer trips, better utilization of equipment. Options A/B/C all tend to raise handling/shipping costs; D is the correct cost-saving strategy.

NEW QUESTION # 76

.....

The desktop software MSSC CLT practice exam format can be used easily used on your Windows system. Customers can use it without the internet. FreeDumps have made all of the different formats so the students won't face any extra issues and crack CLT Certification exams for the betterment of their futures.
