010-160 Valid Braindumps, 010-160 Valid Study Plan

Our 010-160 exam braindumps will give you a feeling that they will really make you satisfied. I know that we don't say much better than letting you experience it yourself. We very much welcome you to download the trial version of our 010-160 practice engine. Our ability to provide users with free trial versions of our 010-160 Study Materials is enough to prove our sincerity and confidence. Just free download the 010-160 learning guide, you will love it for sure!

Lpi Linux Essentials Certificate Exam - version 1.6 Sample Questions (Q48-Q53):

NEW QUESTION # 48

What information is stored in/etc/passwd? (Choose three correct answers.)

- A. The encrypted password
- B. The username
- C. The numerical user ID
- D. The user's default shell
- E. The user's storage space limit

Answer: B,C,D

Explanation:

Explanation

The /etc/passwd file is a plain text-based database that contains information for all user accounts on the system. It is owned by root and has 644 permissions. The file can only be modified by root or users with sudo privileges and readable by all system users. Each line of the /etc/passwd file contains seven comma-separated fields, representing a user account. The fields are as follows:

- * Username: The string you type when you log into the system. Each username must be a unique string on the machine. The maximum length of the username is restricted to 32 characters.
- * Password: In older Linux systems, the user's encrypted password was stored in the /etc/passwd file. On most modern systems, this field is set to x, and the user password is stored in the /etc/shadow file.
- * User ID (UID): The user identifier is a number assigned to each user by the operating system to refer to a user. It is used by the kernel to check for the user privileges and grant access to system resources. The UID 0 is reserved for the root user and cannot be assigned to any other user.
- * Group ID (GID): The user's group identifier number, referring to the user's primary group. When a user creates a file, the file's group is set to this group. Typically, the name of the group is the same as the name of the user. User's secondary groups are listed in the /etc/group file.
- * User ID Info (GECOS): This is a comment field. This field contains a list of comma-separated values with the following information: User's full name or the application name, Room number, Work phone number, Home phone number, Other contact information.
- * Home directory: The absolute path to the user's home directory. It contains the user's files and configurations. By default, the user home directories are named after the name of the user and created under the /home directory.
- * Login shell: The absolute path to the user's login shell. This is the shell that is started when the user logs into the system. On most Linux distributions, the default login shell is Bash.

Therefore, the correct answers are B, C, and E. The user's storage space limit (A) is not stored in the /etc/passwd file, but in the /etc/quota file. The encrypted password (D) is not stored in the /etc/passwd file, but in the /etc/shadow file. References:

NEW QUESTION # 49

Which command adds the new usertuxand creates the user's home directory with default configuration files?

- A. usercreate tux
- B. passwd -a tux
- C. defaultuser tux
- D. useradd -o default tux

- E. `useradd -m tux`

Answer: E

NEW QUESTION # 50

What is true about the `dmesg` command? (Choose two.)

- A. It traces the execution of a command and shows each step the program carries out.
- B. It sends messages to the command lines of all current user sessions.
- C. It immediately outputs all new messages written to the system journal.
- D. It displays the content of the Linux kernel's ring buffer.
- E. It might not display older information because it was overwritten by newer information.

Answer: D,E

NEW QUESTION # 51

What is the preferred source for the installation of new applications in a Linux based operating system?

- A. The vendor's version management system
- B. The vendor's website
- C. A CD-ROM disk
- D. The distribution's package repository
- E. A retail store

Answer: D

Explanation:

The distribution's package repository is the preferred source for the installation of new applications in a Linux based operating system. A package repository is a collection of software packages that are maintained by the distribution and can be easily installed, updated, or removed using a package manager. Package repositories offer several advantages, such as:

They ensure compatibility and stability with the system and other packages.

They provide security updates and bug fixes for the packages.

They reduce the risk of malware or corrupted files.

They simplify the dependency management and configuration of the packages.

The other sources are not preferred because they may not offer these benefits and may cause problems with the system. The vendor's version management system, the vendor's website, or a CD-ROM disk may contain packages that are not compatible with the distribution or may conflict with other packages. A retail store may not have the latest or the most suitable packages for the system. Reference:

NEW QUESTION # 52

What is true about links in a Linux file system?

- A. A symbolic link can point to a file on another file system.
- B. A hard link can only point to a directory and never to a file.
- C. When the target of the symbolic link is moved, the link is automatically updated.
- D. A symbolic link can only point to a file and not to a directory.
- E. Only the root user can create hard links.

Answer: A

NEW QUESTION # 53

.....

There are so many saving graces to our 010-160 exam simulation which inspired exam candidates accelerating their review speed and a majority of them even get the desirable outcomes within a week. Therefore, many exam candidates choose our 010-160 Training Materials without scruple. For as you can see that our 010-160 study questions have the advantage of high-quality and high-efficiency. You will get the 010-160 certification as well if you choose our exam guide.
