Our QSA_New_V4 practice questions enjoy great popularity in this line. We provide our QSA_New_V4 exam braindumps on the superior quality and being confident that they will help you expand your horizon of knowledge of the exam. They are time-tested QSA_New_V4 Learning Materials, so they are classic. As well as our after-sales services. And we can always give you the most professional services on our QSA_New_V4 training guide.

PCI SSC QSA_New_V4 Exam Syllabus Topics:

Topic	Details
Topic 1	Real-World Case Studies: This section of the exam measures the skills of Cybersecurity Consultants and involves analyzing real-world breaches, compliance failures, and best practices in PCI DSS implementation. Candidates must review case studies to understand practical applications of security standards and identify lessons learned. One key skill evaluated is applying PCI DSS principles to prevent security breaches.
Topic 2	PCI DSS Testing Procedures: This section of the exam measures the skills of PCI Compliance Auditors and covers the testing procedures required to assess compliance with the Payment Card Industry Data Security Standard (PCI DSS). Candidates must understand how to evaluate security controls, identify vulnerabilities, and ensure that organizations meet compliance requirements. One key skill evaluated is assessing security measures against PCI DSS standards.
Topic 3	PCI Reporting Requirements: This section of the exam measures the skills of Risk Management Professionals and covers the reporting obligations associated with PCI DSS compliance. Candidates must be able to prepare and submit necessary documentation, such as Reports on Compliance (ROCs) and Self-Assessment Questionnaires (SAQs). One critical skill assessed is compiling and submitting accurate PCI compliance reports.

Topic 4	• PCI Validation Requirements: This section of the exam measures the skills of Compliance Analysts and evaluates the processes involved in validating PCI DSS compliance. Candidates must understand the different levels of merchant and service provider validation, including self-assessment questionnaires and external audits. One essential skill tested is determining the appropriate validation method based on business type.
Topic 5	• Payment Brand Specific Requirements: This section of the exam measures the skills of Payment Security Specialists and focuses on the unique security and compliance requirements set by different payment brands, such as Visa, Mastercard, and American Express. Candidates must be familiar with the specific mandates and expectations of each brand when handling cardholder data. One skill assessed is identifying brand-specific compliance variations.

QSA_New_V4 New Braindumps, Updated QSA_New_V4 Test Cram

As a worldwide leader in offering the best QSA_New_V4 Test Torrent, we are committed to providing comprehensive service to the majority of consumers and strive for constructing an integrated service. What's more, we have achieved breakthroughs in QSA_New_V4 certification training application as well as interactive sharing and after-sales service. As a matter of fact, our company takes account of every client's difficulties with fitting solutions. As long as you need help, we will offer instant support to deal with any of your problems about our Qualified Security Assessor V4 Exam guide torrent. Any time is available; our responsible staff will be pleased to answer your questions.

PCI SSC Qualified Security Assessor V4 Exam Sample Questions (Q59-Q64):

NEW QUESTION # 59

At which step in the payment transaction process does the merchant's bank pay the merchant for the purchase, and the cardholder's bank bill the cardholder?

- **A. Settlement**
- B. Clearing
- C. Authorization
- D. Chargeback

Answer: A

Explanation:

The settlement phase is when:

- * The merchant's acquiring bank pays the merchant, and
- * The issuing bank bills the cardholder.

This occurs after authorization and clearing have already taken place.

- * Option A: #Incorrect. Authorization verifies the card and funds but doesn't trigger payment.
- * Option B: #Incorrect. Clearing exchanges transaction details between banks but doesn't finalize funds.
- * Option C: #Correct. Settlement is when funds are actually transferred.
- * Option D: #Incorrect. Chargebacks reverse transactions, not settle them.

Reference: PCI SSC Glossary - Definitions of "Authorization", "Clearing", and "Settlement".

NEW QUESTION # 60

Which scenario meets PCI DSS requirements for critical systems to have correct and consistent time?

- **A. Central time servers receive time signals from specific, approved external sources.**
- B. Each internal system is configured to be its own time server.
- C. Access to time configuration settings is available to all users of the system.
- D. Each internal system peers directly with an external source to ensure accuracy of time updates.

Answer: A

Explanation:

Time Synchronization Standards:

* PCI DSS Requirement 10.4 mandates that all critical systems use a centralized time server to ensure time accuracy across systems. Approved external sources provide a reliable and consistent time signal.

Correctness and Consistency of Time:

* Using a central time server ensures uniformity of timestamps, which is critical for forensic analysis, log correlation, and monitoring activities.

Invalid Options:

* A: Internal systems acting as their own servers could lead to inconsistent timestamps.

* B: Allowing all users access to time settings poses a security risk.

* D: Peering directly with external sources bypasses centralized control, violating consistency requirements.

NEW QUESTION # 61

Which scenario meets PCI DSS requirements for critical systems to have correct and consistent time?

- **A. Central time servers receive time signals from specific, approved external sources.**
- B. Each internal system is configured to be its own time server.
- C. Access to time configuration settings is available to all users of the system.
- D. Each internal system peers directly with an external source to ensure accuracy of time updates.

Answer: A

Explanation:

Per Requirement 10.6.1, PCI DSS mandates that time-synchronization technology be used, and systems must be synchronized to a central time server that itself receives time from an approved external source. This ensures logs can be accurately correlated.

* Option A: Incorrect. Time inconsistency arises if each system operates independently.

* Option B: Incorrect. Time configuration must be restricted to authorized personnel only.

* Option C: Correct. Time should be sourced from a centralized server which is in sync with reliable external sources.

* Option D: Incorrect. Each system peering independently can cause inconsistencies.

Reference: PCI DSS v4.0.1 - Requirement 10.6.1.1.

NEW QUESTION # 62

PCI DSS Requirement 12.7 requires screening and background checks for which of the following?

- A. All personnel employed by the organization.
- B. Visitors with access to the organization's facilities.
- **C. Personnel with access to the cardholder data environment.**
- D. Cashiers with access to one card number at a time.

Answer: C

Explanation:

PCI DSS Requirement 12.7 mandates that organizations perform background checks on personnel who have access to the cardholder data environment (CDE) to ensure that individuals with malicious intent do not gain access to sensitive cardholder data.

* Option A: Incorrect. While conducting background checks on all personnel is a good security practice, PCI DSS specifically requires checks for those with access to the CDE.

* Option B: Correct. Background checks are required for personnel with access to the CDE to mitigate the risk of insider threats.

* Option C: Incorrect. Visitors are not typically subjected to background checks but should be escorted and monitored while in sensitive areas.

NEW QUESTION # 63

An entity wants to know if the Software Security Framework can be leveraged during their assessment.

Which of the following software types would this apply to?

- A. Validated Payment Applications that are listed by PCI SSC and have undergone a PA-DSS assessment.
- B. Only software which runs on PCI PTS devices.
- C. Any payment software in the CDE.

- Answer: D**

The Software Security Framework (SSF) is intended to support entities using bespoke and custom software within the Cardholder Data Environment (CDE). If the software is developed and maintained in accordance with the Secure Software Lifecycle (SLC) Standard, it can help demonstrate secure software development practices and potentially reduce the number of applicable PCI DSS requirements.

* Option C: Incorrect. PA-DSS has been retired; those applications are now listed as "Acceptable Only for Pre-Existing Deployments".

Reference:PCI DSS v4.0.1 - Appendix F; Section 3, page 7; Secure Software Lifecycle (Secure SLC) Standard.
