Therefore, no matter what kind of life you live, no matter how much knowledge you have attained already, it should be a great wonderful idea to choose our 156-315.81 Guide Torrent for sailing through the difficult test. On the whole, nothing is unbelievable, to do something meaningful from now, success will not wait for a hesitate person, go and purchase!

## CheckPoint Check Point Certified Security Expert R81 Sample Questions (Q448-Q453):

### NEW QUESTION # 448

How to can you make sure that the old logs will be available after updating the Management to version R81.20 using the Advanced Upgrade Method?

- A. Use the WebUI to save a snapshot before updating the Management -> Maintenance > Snapshot Management
- **B. The logs will be included running SFWDIR/scripts/migrate\_server export -v R81.20 <path/filename>**
- C. Use the WebUI -> Maintenance > System Backup and store the backup on a remote FTP server
- D. Use the migrate\_server tool with the option '-l' for the logs and '-x' for the index

**Answer: B**

Explanation:

Explanation

The best way to make sure that the old logs will be available after updating the Management to version R81.20 using the Advanced Upgrade Method is to use the migrate\_server tool with the option '-l' for the logs and '-x' for the index. This option will export both logs and index files from an existing Security Management Server or Multi-Domain Server to a specified directory or file. The exported data can then be imported to a new server using a similar command with '-i' option. References: [Check Point R81 Installation and Upgrade Guide]

### NEW QUESTION # 449

- A. secondary Smartcenter
- B. Which Security Management Server should he use for making changes?
- C. primary Log Server
- D. connect virtual IP of Smartcenter HA
- **E. active SmartConsole**

**Answer: E**

Explanation:

In Management HA, you should use the active SmartConsole for making changes. The active SmartConsole is connected to the Primary Security Management Server, which is responsible for synchronizing the configuration with the Secondary Security Management Server. If you use the secondary SmartCenter, your changes will not be replicated to the primary SmartCenter and will be lost in case of a failover. Reference: Check Point Resource Library, page 9

### NEW QUESTION # 450

What processes does CPM control?

- A. Object-Store, Database changes, CPM Process and web-services
- B. DLEServer, Object-Store, CP Process and database changes
- C. web-services, CPML process, DLEserver, CPM process
- **D. web\_services, dle\_server and object\_Store**

**Answer: D**

Explanation:

CPM stands for Check Point Management, which is a process that runs on the Security Management server and controls the management operations, such as policy installation, object creation, configuration backup, etc. CPM also controls other processes that are related to the management functions, such as:

web\_services: This process is responsible for providing web services for the communication between SmartConsole and the Security Management server. It handles requests from SmartConsole clients and forwards them to CPM or other processes.

dle\_server: This process is responsible for managing the log files and indexes. It handles queries from SmartLog and SmartEvent and provides log data to CPM or other processes.

object\_Store: This process is responsible for storing and retrieving objects from the database. It handles requests from CPM or other processes and provides object data.

Therefore, the correct answer is D)

The other options are incorrect because:

A) Object-Store, Database changes, CPM Process and web-services: This option includes some processes that are controlled by CPM, such as Object-Store, CPM Process, and web-services, but it also includes Database changes, which is not a process but an action performed by CPM or other processes.

B) web-services, CPMI process, DLEserver, CPM process: This option includes some processes that are controlled by CPM, such as web-services, DLEserver, and CPM process, but it also includes CPMI process, which is not a process but a protocol used by CPM or other processes to communicate with each other.

C) DLEServer, Object-Store, CP Process and database changes: This option includes some processes that are controlled by CPM, such as DLEServer and Object-Store, but it also includes CP Process and database changes, which are not processes but a generic term for any Check Point process and an action performed by CPM or other processes respectively.

#### NEW QUESTION # 451

What are valid authentication methods for mutual authenticating the VPN gateways?

- A. PKI Certificates and DynamicID OTP
- B. Pre-Shared Secrets and Kerberos Ticket
- C. PKI Certificates and Kerberos Tickets
- **D. Pre-shared Secret and PKI Certificates**

**Answer: D**

Explanation:

The valid authentication methods for mutual authenticating the VPN gateways are Pre-shared Secret and PKI Certificates. Pre-shared Secret is a method that uses a secret key that is known only to the two VPN gateways. PKI Certificates is a method that uses digital certificates that are issued by a trusted Certificate Authority (CA) and contain the public key of each VPN gateway. Both methods ensure that the VPN gateways can verify each other's identity before establishing a secure VPN tunnel. Reference: [Check Point R81 VPN Administration Guide]

#### NEW QUESTION # 452

When requiring certificates for mobile devices, make sure the authentication method is set to one of the following, Username and Password, RADIUS or \_\_\_\_\_.

- A. Complexity
- B. TacAcs
- **C. SecurID**
- D. SecureID

**Answer: C**

Explanation:

When requiring certificates for mobile devices, the authentication method should be set to one of the following:

Username and Password

RADIUS

SecurID (RSA SecurID)

So, the correct answer is option B, "SecurID."

Options A, C, and D are not standard authentication methods for mobile devices in this context.
