Our Salesforce PDI exam question is widely known throughout the education market. Almost all the candidates who are ready for the qualifying examination know our products. Even when they find that their classmates or colleagues are preparing a PDI exam, they will introduce our study materials to you. So, our learning materials help users to be assured of the PDI exam. Currently, my company has introduced a variety of learning materials, covering almost all the official certification of qualification exams, and each PDI practice dump in our online store before the listing, are subject to stringent quality checks within the company. Thus, users do not have to worry about such trivial issues as typesetting and proofreading, just focus on spending the most practice to use our Salesforce PDI test materials. After careful preparation, I believe you will be able to pass the exam.

To prepare for the Salesforce PDI Exam, developers can take advantage of a variety of resources, including online training courses, study guides, and practice exams. Salesforce offers a comprehensive online training program called Trailhead, which provides developers with a platform to learn, practice, and test their skills in Salesforce development. Additionally, there are several third-party training providers that offer online courses and practice exams to help developers prepare for the exam.

The PDI exam covers a wide range of topics, including data modeling, user interface customization, automation, testing, and debugging. It also tests the candidate's ability to use Apex, Salesforce's proprietary programming language, to create custom business logic and integrate with external systems. Passing the PDI Exam demonstrates that a developer has a comprehensive understanding of the Salesforce platform and is capable of building complex applications that meet the needs of businesses and organizations.

Valid PDI exam dumps ensure you a high PDI passing rate

You don't need to install any separate software or plugin to use it on your system to practice for your actual Platform Developer I (PDI) (PDI) exam. TroytecDumps Salesforce PDI web-based practice software is supported by all well-known browsers like Chrome, Firefox, Opera, Internet Explorer, etc.

Salesforce Platform Developer I (PDI) Sample Questions (Q34-Q39):

NEW QUESTION # 34
What can be easily developed using the Lightning Component framework?

- A. Customized JavaScript buttons
- B. Salesforce integrations
- C. Lightning Pages
- D. Salesforce Classic user Interface pages

Answer: C

NEW QUESTION # 35

A developer writes a SOQL query to find child records for a specific parent. How many levels can be returned in a single query?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: B

NEW QUESTION # 36

Given the following Apex statement:
Account myAccount = [SELECT Id, Name FROM Account);
What occurs when more than one Account is returned by the SOQL query?

- A. The query fails and an error is written to the debug log.
- B. The variable, myaccount, is automatically cast to the List data type.
- C. The first Account returned is assigned to myAccount.
- D. An unhandled exception is thrown and the code terminates.

Answer: D

Explanation:
* The SOQL query assigns its result directly to a single sObject variable (Account myAccount). If the query returns more than one record, Salesforce throws aQueryExceptionbecause the system cannot automatically cast multiple results to a single sObject.
* Not Suitable:
* Option A: The variable cannot be automatically cast to a list.
* Option C: The query itself does not fail but throws an exception.
* Option D: The first record is not automatically assigned.
:SOQL Query Considerations

NEW QUESTION # 37

For which three items can 2 trace flag be configured?
Choose 3 answers

- A. Flow
- B. Visualforce
- C. Apex Trager
- D. Apex Class
- E. User

Answer: C,D,E

NEW QUESTION # 38

A developer created a new after insert trigger on the Lead object that creates Task records for each Lead.
After deploying to production, an existing outside integration that inserts Lead records in batches to Salesforce is occasionally reporting total batch failures being caused by the Task insert statement. This causes the integration process in the outside system to stop, requiring a manual restart.
Which change should the developer make to allow the integration to continue when some records in a batch cause failure due to the Task insert statement, so that manual restarts are not needed?

- A. Deactivate the trigger before the integration runs.
- B. Use the Database method with allOrNone set to false.
- C. Remove the Apex class from the integration user's profile,
- D. Use a try-catch block after the insert statement,

Answer: B

Explanation:
Using Database.insert with allOrNone=false allows partial success in DML operations.
Option D: Use the Database method with allOrNone set to false.
Records that cause errors are not inserted.
Successful records are committed.
Prevents the entire batch from failing.
Why Not Other Options:
Option A: Deactivating the trigger is not practical.
Option B: Removing the class from the profile may cause other issues.
Option C: A try-catch block won't prevent the batch from failing.
Reference:
Database Methods:
"Use the Database DML methods to specify whether or not to allow partial record processing."
