# Free PDF Salesforce - Analytics-Arch-201 Accurate Examcollection Questions Answers

P.S. Free & New Analytics-Arch-201 dumps are available on Google Drive shared by Pass4SureQuiz: https://drive.google.com/open?id=1ZRl_JGgvlDp3jM23Jkrw4NQhWc0rncOh

Our Salesforce is suitable for computer users with a Windows operating system. Salesforce Analytics-Arch-201 practice exam support team cooperates with users to tie up any issues with the correct equipment. If Analytics-Arch-201 Certification Exam material changes, Pass4SureQuiz also issues updates free of charge for three months following the purchase of our Analytics-Arch-201 exam questions.

Our braindumps for Analytics-Arch-201 real exam are written to highest standard of technical profession, tested by our senior IT experts and certified trainers. You can totally trust our Analytics-Arch-201 exam prep materials because we guarantee the best quality of our products. With our latest Analytics-Arch-201 Training Materials, you will pass the certification exam in your first try. We hope you clear exam successfully with our products.

>> Examcollection Analytics-Arch-201 Questions Answers <<

Enhance Your Preparation with Salesforce Analytics-Arch-201 Practice Test Engine

Analytics-Arch-201 exam questions are being offered in three easy-to-use and compatible formats. The Salesforce Analytics-Arch-201 PDF dumps file, desktop practice test software, and web-based practice test software. All three Analytics-Arch-201 Exam Questions format contain the Salesforce Analytics-Arch-201 actual questions and help you in Analytics-Arch-201 exam preparation entirely.

Salesforce Analytics-Arch-201 Exam Syllabus Topics:

Topic	Details
Topic 1	• Deploy Tableau Server: This domain assesses the ability of Tableau Administrators to perform production-ready deployments of Tableau Server. It encompasses installing and configuring Tableau Server with external components, supporting air-gapped environments, disaster recovery validations, and blue-green deployments. It includes configuring and troubleshooting various authentication methods such as SAML, Kerberos, and LDAP. The section also covers implementing encryption strategies, installing and verifying Tableau Server on Linux and Windows platforms, resolving installation and configuration issues, and managing service accounts and logging.

Topic 2	• Monitor and Maintain a Tableau Deployment: This section evaluates skills of Tableau Administrators in monitoring, maintaining, and optimizing Tableau environments. It involves creating custom administrative dashboards, conducting load testing using tools like TabJolt, and analyzing test results. Troubleshooting complex performance bottlenecks in workbooks and server resources is key, as is tuning caching and scaling strategies. It covers leveraging observability tools such as the Resource Monitoring Tool, analyzing logs and metrics, and adjusting architecture accordingly. Automation of maintenance functions using APIs, scripting, and scheduling is included, along with managing server extensions, content automation, dashboard extensions, web data connectors, and secure embedded solutions.
Topic 3	• Design a Tableau Infrastructure: This section of the exam measures skills of Tableau Consultants and focuses on planning and designing a complex Tableau deployment. It covers gathering user requirements, licensing strategies including Authorization-to-Run, high availability and disaster recovery planning, and mapping server add-ons to the organization's needs. It includes planning and implementing Tableau Cloud with Bridge, authentication, user provisioning, and multi-site configuration. Additionally, it addresses migration planning across Tableau products, operating systems, identity stores, and consolidations, as well as designing process topologies, sizing, node roles, and recommending server configurations including security, hardware, and disaster recovery.

Salesforce Certified Tableau Architect Sample Questions (Q183-Q188):

NEW QUESTION # 183
A company is transitioning to Tableau Cloud but still has critical data in on-premises databases that need to be accessed in real-time. What is the best solution for integrating these data sources with Tableau Cloud?

- A. Migrate all on-premises data to the cloud before using Tableau Cloud
- B. Utilize Tableau Builder for real-time data integration
- C. Implement Tableau Bridge to establish a live connection to on-premises databases
- D. Rely solely on Tableau Cloud's native capabilities for on-premises data integration

Answer: C

Explanation:
Implement Tableau Bridge to establish a live connection to on-premises data-bases Tableau Bridge is specifically designed to allow real-time access to on-premises data from Tableau Cloud, making it the ideal solution for this scenario. Option A is incorrect because Tableau Prep Builder is used for data preparation, not for establishing live connections to on-premises data sources. Option C is incorrect as migrating all data to the cloud may not be feasible or desirable for all companies. Option D is incorrect because Tableau Cloud's native capabilities do not include direct live data connections to on-premises databases without Tableau Bridge.

NEW QUESTION # 184
In the context of SSL encryption for Tableau Server, what is an important consideration when renewing an SSL certificate?

- A. Renewing the certificate with the exact same specifications as the old one to avoid configuration changes
- B. Switching to a different SSL protocol version during renewal for enhanced security
- C. Temporarily disabling SSL encryption while waiting for the new certificate to be issued
- D. Ensuring that the new SSL certificate is renewed and installed before the expiration of the current certificate

Answer: D

Explanation:
Ensuring that the new SSL certificate is renewed and installed before the expiration of the current certificate When renewing an SSL certificate for Tableau Server, it is important to ensure that the new certificate is renewed and installed before the current one expires. This continuity prevents any interruptions in SSL encryption and maintains secure communications without any downtime or security warnings due to an expired certificate. Option A is incorrect because the new certificate does not necessarily need to have the exact same specifications; updates or changes might be beneficial. Option C is incorrect as switching SSL protocol versions during renewal should be done based on security needs and compatibility, not as a routine process. Option D is incorrect because disabling SSL encryption, even temporarily, can expose the server to security risks.

NEW QUESTION # 185

When configuring the 'Run As' service account for Tableau Server on a Windows system, what is a key consideration to ensure proper access and security?

- A. Configuring the 'Run As' service account to automatically expire every 30 days for security purposes
- B. Enabling remote desktop access for the 'Run As' service account for easier management
- C. Assigning the 'Run As' service account permissions to specific Tableau Server folders and registry settings only
- D. Setting the 'Run As' service account to have the same password as the administrator's ac-count for consistency

Answer: C

Explanation:

Assigning the 'Run As' service account permissions to specific Tableau Server folders and registry settings only When configuring the 'Run As' service account for Tableau Server on a Windows system, it is crucial to assign the account permissions only to those specific folders and registry settings necessary for Tableau Server operation. This ensures that the account has the necessary access to function properly while maintaining a secure environment by limiting its scope of control. Option A is incorrect because setting the 'Run As' account's password to match the administrator's compromises security by potentially exposing administrative credentials. Option B is incorrect as setting the account to expire every 30 days could lead to unnecessary disruptions in service and does not inherently enhance security. Option D is incorrect because enabling remote desktop access for the 'Run As' service account is not a standard practice and could introduce addition-al security risks.

NEW QUESTION # 186

What is a crucial consideration when recommending a load testing strategy for a newly deployed Tableau Server environment?

- A. Conducting tests only during off-peak hours to minimize the impact on regular users
- B. Limiting the testing to only a few selected reports to reduce the load on the server
- C. Testing with the maximum number of users simultaneously to assess the peak performance capacity
- D. Focusing solely on the load time of the most complex dashboards available on the server

Answer: C

Explanation:

Testing with the maximum number of users simultaneously to assess the peak performance capacity When recommending a load testing strategy for Tableau Server, it is crucial to test with the maximum number of users simultaneously. This approach assesses the server's peak performance capacity and helps identify potential bottlenecks or issues that could arise under maxi-mum load, ensuring that the server can handle high user demand. Option B is incorrect because focusing solely on complex dashboards does not provide a complete picture of the server's performance under varying conditions. Option C is incorrect as conducting tests only during off-peak hours might not accurately reflect the server's performance during normal operational loads. Option D is incorrect because limiting the testing to only a few selected reports does not fully stress test the server's capacity to handle a realistic and diverse set of user demands.

NEW QUESTION # 187

When configuring a test environment for load testing a Tableau Server deployment, what is a key factor to ensure the environment is suitable for effective testing?

- A. Mirroring the hardware and software configurations of the production environment as closely as possible
- B. Ensuring the test environment has significantly higher specifications than the production environment to test maximum capacity
- C. Using a simplified dataset in the test environment to focus on server performance
- D. Configuring the test environment without security protocols to observe performance with-out any restrictions

Answer: A

Explanation:

Mirroring the hardware and software configurations of the production environment as closely as possible When setting up a test environment for load testing, it is crucial to mirror the production environment's hardware and software configurations as closely as possible. This similarity ensures that the test results are representative of how the Tableau Server would perform in the actual production setting, providing reliable and actionable insights. Option A is incorrect because having significantly higher specifications in the test environment can provide misleading results that do not reflect the actual production performance. Option C is incorrect as

using a simplified dataset might not adequately represent the complexity of real-world usage in the production environment. Option D is incorrect because excluding security protocols can affect performance measurements and does not accurately reflect the production environment's constraints.

NEW QUESTION # 188

......

To attain this you just need to enroll in the Analytics-Arch-201 certification exam and put all your efforts to pass this challenging Analytics-Arch-201 exam with good scores. However, to get success in Salesforce Analytics-Arch-201 dumps PDF is not an easy task, it is quite difficult to pass it. But with proper planning, firm commitment, and Salesforce Analytics-Arch-201 Exam Questions, you can pass this milestone easily. The Pass4SureQuiz is a leading platform that offers real, valid, and updated Salesforce Analytics-Arch-201 Dumps.
