We can proudly say that our Terraform-Associate-003 exam questions are global. So no matter what kinds of Terraform-Associate-003 test torrent you may ask, our after sale service staffs will help you to solve your problems of Terraform-Associate-003 practice braindump in the most professional way. Since our customers aiming to Terraform-Associate-003 study tool is from different countries in the world, and there is definitely time difference among us, we will provide considerate online after-sale service on our Terraform-Associate-003 training guide twenty four hours a day, seven days a week, please just feel free to contact with us anywhere at any time.

## HashiCorp Certified: Terraform Associate (003) (HCTA0-003) Sample Questions (Q92-Q97):

### NEW QUESTION # 92

When you initialize Terraform, where does it cache modules from the public Terraform Registry?

- A. In memory.
- B. They are not cached.
- C. In the /tmp directory.
- D. In the .terraform sub-directory.

**Answer: D**

Explanation:

\* Terraform downloads modules and providers into the .terraform directory inside the working directory.

\* A (/tmp/)- Incorrect; modules are not stored temporarily.

\* C (In memory)- Incorrect; modules persist on disk.

\* D (Not cached)- Incorrect; Terraform does cache modules for efficiency.

Official Terraform Documentation Reference:

Terraform Module Caching

### NEW QUESTION # 93

Which of the following is not a valid source path for specifying a module?

- A. source - "/module"
- B. source - "hashicorp/consul/aws"
- C. source - "github.com/hashicorp/examplePref-ul.0.8M"
- D. source = "/module?version=v1.6.0"

**Answer: D**

Explanation:

Terraform modules are referenced by specifying a source location. This location can be a URL or a file path. However, specifying query parameters such as ?version=v1.6.0 directly within the source path is not a valid or supported method for specifying a module version in Terraform. Instead, version constraints are specified using the version argument within the module block, not as part of the source string. References = This clarification is based on Terraform's official documentation regarding module usage, which outlines the correct methods for specifying module sources and versions.

### NEW QUESTION # 94

You decide to move a Terraform state file to Amazon S3 from another location. You write the code below into a file called backend.tf

```
terraform {
  backend "s3" {
    bucket = "my-tf-bucket"
    region = "us-east-1"
  }
}
```

Which command will migrate your current state file to the new S3 remote backend?

- A. terraform refresh
- B. terraform state
- C. terraform init
- D. terraform push

**Answer: C**

Explanation:

This command will initialize the new backend and prompt you to migrate the existing state file to the new location3. The other commands are not relevant for this task.

#### NEW QUESTION # 95

What is the provider for this resource?

- A. Test
- B. Main
- C. Vpc
- D. aws

**Answer: D**

Explanation:

In the given Terraform configuration snippet:

```
resource "aws_vpc" "main" {  
  name = "test"  
}
```

The provider for the resource `aws_vpc` is `aws`. The provider is specified by the prefix of the resource type. In this case, `aws_vpc` indicates that the resource type `vpc` is provided by the `aws` provider.

References:

Terraform documentation on providers: Terraform Providers

#### NEW QUESTION # 96

You created infrastructure outside the Terraform workflow that you now want to manage using Terraform.

Which command brings the infrastructure into Terraform state?

- A. `terraform refresh`
- B. `terraform init`
- C. `terraform import`
- D. `terraform get`

**Answer: C**

Explanation:

The `terraform import` command allows Terraform to take existing infrastructure and bring it under Terraform's management.

\* A (`terraform get`) is incorrect because it is used to fetch modules.

\* B (`terraform refresh`) is incorrect because it only updates Terraform's state to match the infrastructure but does not import resources.

\* D (`terraform init`) is incorrect because it only initializes the Terraform working directory.

Official Terraform Documentation Reference:

`terraform import` - HashiCorp Documentation

#### NEW QUESTION # 97

.....

If you have been very panic sitting in the examination room, our Terraform-Associate-003 actual exam allows you to pass the exam more calmly and calmly.
