

Free PDF Updated Fortinet - Printable NSE7_EFW-7.2 PDF

DOWNLOAD the newest It-Tests NSE7_EFW-7.2 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1yGE81PbIWfALjz7k2XHtr5p4jPjgsq-2>

Our NSE7_EFW-7.2 study guide and training materials of It-Tests are summarized by experienced IT experts, who combine the NSE7_EFW-7.2 original questions and real answers. Due to our professional team, the passing rate of NSE7_EFW-7.2 test of our It-Tests is the highest in the NSE7_EFW-7.2 exam training. So, choosing It-Tests, choosing success.

Fortinet NSE7_EFW-7.2 Exam Syllabus Topics:

Topic	Details
Topic 1	• Security profiles: Using FortiManager as a local FortiGuard server is discussed in this topic. Moreover, it delves into configuring web filtering, application control, and the intrusion prevention system (IPS) in an enterprise network.
Topic 2	• System configuration: This topic discusses Fortinet Security Fabric and hardware acceleration. Furthermore, it delves into configuring various operation modes for an HA cluster.
Topic 3	• Routing: It covers implementing OSPF to route enterprise traffic and Border Gateway Protocol (BGP) to route enterprise traffic.
Topic 4	• Central management: The topic of Central management covers implementing central management.

Topic 5	VPN: Implementing IPsec VPN IKE version 2 is discussed in this topic. Additionally, it delves into implementing auto-discovery VPN (ADVPN) to enable on-demand VPN tunnels between sites.

Exam Fortinet NSE7_EFW-7.2 Labs, NSE7_EFW-7.2 Valid Exam Answers

If you can get the certification for the exam, it not only can prove the ability of you but also can improve your competitive force in the job hunting market. NSE7_EFW-7.2 exam braindumps are high quality and accuracy, and we can help you pass the exam in your first attempt, otherwise we will give you refund. Moreover, NSE7_EFW-7.2 test materials contain most of the knowledge points for the exam, and you can pass the exam as well as improve your ability in the process of learning. NSE7_EFW-7.2 exam materials offer you free update for 365 days after payment, and the update version will be sent to your email automatically.

Fortinet NSE 7 - Enterprise Firewall 7.2 Sample Questions (Q57-Q62):

NEW QUESTION # 57

Exhibit.

```

config system central-management
  set type fortimanager
  set mgmt "10.0.1.242"
  config server-list
    edit 1
      set server-type rating
      set addr-type ipv4
      set server-address 10.0.1.240
    next
    edit 2
      set server-type rating
      set addr-type ipv4
      set server-address 10.0.1.243
    next
    edit 3
      set server-type rating
      set addr-type ipv4
      set server-address 10.0.1.244
    next
  end
  set include-default-servers enable
end
  
```

Refer to exhibit, which shows a central management configuration

Which server will FortiGate choose for web filter rating requests if 10.0.1.240 is experiencing an outage?

- A. 10.0.1.244
- B. 10.0.1.242
- C. 10.0.1.243
- D. Public FortiGuard servers

Answer: A

Explanation:

In the event of an outage at 10.0.1.240, the FortiGate will choose the next server in the sequence for web filter rating requests, which is 10.0.1.244 according to the configuration shown in the exhibit. This is because the server list is ordered by priority, and the server with the lowest priority number is chosen first. If that server is unavailable, the next server with the next lowest priority number is chosen, and so on. The public FortiGuard servers are only used if the include-default-servers option is enabled and all the custom servers are unavailable. NEW QUESTION # 58

Exhibit.

Script Name: Static Route

Comments:

Type: CLI Script

Run script on: Remote FortiGate Directly

Script details:

```
# conf rout stat
# edit 0
# set gateway 10.20.121.2
# set priority 20
# set device "wan1"
# next
# end
```

Refer to the exhibit, which contains a CLI script configuration on FortiManager. An administrator configured the CLI script on FortiManager but the script failed to apply any changes to the managed device after being executed.

What are two reasons why the script did not make any changes to the managed device? (Choose two)

- A. CLI scripts must start with #!.
- B. Incomplete commands can cause CLI scripts to fail.
- C. The commands that start with the # sign did not run.
- D. Static routes can be added using only TCI scripts.

Answer: B,C

Explanation:

The commands that start with the # sign did not run because they are treated as comments in the CLI script.

Incomplete commands can cause CLI scripts to fail because they are not recognized by the FortiGate device.

The other options are incorrect because static routes can be added using CLI or GUI, and CLI scripts do not need to start with #!.

References := Configuring custom scripts | FortiManager 7.2.0 - Fortinet Documentation, section "CLI script syntax".

NEW QUESTION # 59

Which two statements about the BFD parameter in BGP are true? (Choose two.)

- A. It detects only two-way failures.
- B. It is supported for neighbors over multiple hops.
- C. It allows failure detection in less than one second.
- D. The two routers must be connected to the same subnet.

Answer: B,C

Explanation:

BFD for Multihop paths

FortiGate BFD can support neighbors connected over multiple hops. When BFD is down, BGP sessions will be reset and will try to re-establish neighbor connection immediately. See BFD for multihop path for BGP for more information.

<https://docs.fortinet.com/document/fortigate/7.2.3/administration-guide/771813/bfd>

NEW QUESTION # 60

Refer to the exhibit, which shows two configured FortiGate devices and peering over FGSP.

The main link directly connects the two FortiGate devices and is configured using the `set session-syn-dev <interface>` command. What is the primary reason to configure the main link?

- A. To load balance both sessions and configuration synchronization between layer 2 and 3
- **B. To have both sessions and configuration synchronization in layer 3**
- C. To have only configuration synchronization in layer 3
- D. To have both sessions and configuration synchronization in layer 2

Answer: B

Explanation:

The primary purpose of configuring a main link between the devices is to synchronize session information so that if one unit fails, the other can continue processing traffic without dropping active sessions.

A: To have both sessions and configuration synchronization in layer 2.

This is incorrect because FGSP is used for session synchronization, not configuration synchronization.

B: To load balance both sessions and configuration synchronization between layer 2 and 3.

FGSP does not perform load balancing and is not used for configuration synchronization.

C: To have only configuration synchronization in layer 3.

The main link is not used solely for configuration synchronization.

D: To have both sessions and configuration synchronization in layer 3.

The main link in an FGSP setup is indeed used to synchronize session information across the devices, and it operates at layer 3 since it uses IP addresses to establish the peering.

NEW QUESTION # 61

Which two statements about IKE vision 2 are true? (Choose two.)

- A. Phase 1 includes main mode

- Answer: C,D**

IKE version 2 supports the extensible authentication protocol (EAP), which allows for more flexible and secure authentication methods¹. IKE version 2 also exchanges a minimum of four messages to establish a secure tunnel, which is more efficient than IKE version 1².
