It tests the candidates' understanding of the Heroku platform, its architecture, and how to use it to build scalable, secure, and efficient applications.

Salesforce Certified Heroku Architect Sample Questions (Q95-Q100):

NEW QUESTION #95

At Universal Containers (UC), a developer named Yuichiro wrote a PHP application that, in production, uses a MySQL database. Yuichiro is onboarding Mary, a new UC developer, who is setting up her development environment. Yuichiro asks Mary to:

- 1) install the related PHP libraries manually so the application will run;
- 2) use MongoDB, instead of MySQL, in the development environment.

According to the Twelve-Factor methodology, which changes should an Architect recommend?

- A. Recursively determine code dependencies on application startup and maintain separate Git branches for the MongoDB-and MySQL- compatible versions of the application.
- B. Explicitly declare code dependencies in the application's environment variables and use the same type of database in both development and production.
- C. Explicitly declare code dependencies in the application's source and use the same type of database in both development and production.
- D. Persist code dependencies in the application's production database. Use the same type of database locally to ensure that the dependencies are accessible.

Answer: D
