The most attractive thing about a learning platform is not the size of his question bank, nor the amount of learning resources, but more importantly, it is necessary to have a good control over the annual propositional trend. The 2V0-16.25 quiz guide through research and analysis of the annual questions, found that there are a lot of hidden rules are worth exploring, plus we have a powerful team of experts, so the rule can be summed up and use. The 2V0-16.25 prepare torrent can be based on the analysis of the annual questions, it is concluded that a series of important conclusions related to the 2V0-16.25 qualification examination, combining with the relevant knowledge of recent years, then predict the direction which can determine this year's 2V0-16.25 exam. 2V0-16.25 test material will improve the ability to accurately forecast the topic and proposition trend this year.

Being devoted to this area for over ten years, our experts keep the excellency of our VMware vSphere Foundation 9.0 Administrator exam question like always. They are distinguished experts in this area who can beef up your personal capacity. By cutting through the clutter of tremendous knowledge, they picked up the essence into our 2V0-16.25 guide prep. Up to now our 2V0-16.25 real exam materials become the bible of practice material of this industry. Ten years have gone, and three versions have been made for your reference. They made the biggest contribution to the efficiency and quality of our VMware vSphere Foundation 9.0 Administrator practice materials, and they were popularizing the ideal of passing the exam easily and effectively. All 2V0-16.25 Guide prep is the successful outcomes of professional team.

Examcollection VMware 2V0-16.25 Dumps, Valid 2V0-16.25 Study Materials

It will make you practice nicely and productively as you will experience better handling of the VMware 2V0-16.25 questions when you take the actual VMware 2V0-16.25 exam to grab the VMware 2V0-16.25 certification. Work hard and practice with our VMware 2V0-16.25 Dumps till you are confident to pass the VMware 2V0-16.25 exam. And that too with flying colors and achieving the VMware 2V0-16.25 certification on the first attempt.

VMware vSphere Foundation 9.0 Administrator Sample Questions (Q59-Q64):

NEW QUESTION # 59

An administrator has been tasked to create a virtual machine (VM) into a VMware vCenter Supervisor Namespace in an existing VMware vSphere Foundation (VVF) deployment. How would the administrator create the VM?

- A. Create a YAML file and deploy using kubectl.
- B. Deploy using the vSphere Client.
- C. Log in to VCF Automation Service Broker and select the "Create a VM" catalog item.
- D. Use VCF CLI to deploy the VM.

Answer: A

Explanation:

In a VMware vSphere Foundation (VVF) deployment with vCenter Supervisor Namespaces enabled, the method for creating VMs inside a Supervisor Namespace relies on the vSphere VM Service.

* The VM Service exposes VMs as Kubernetes-native objects that are managed using kubectl.

* Administrators (or DevOps engineers with appropriate permissions) must write a VM YAML manifest file, which specifies parameters such as apiVersion, kind: VirtualMachine, spec.imageName, spec.className, spec.storageClass, and spec.networkInterfaces.

* The YAML manifest is then applied with kubectl to the Supervisor context.

This approach is documented as the supported method:

"As a DevOps engineer, provision a VM and its guest OS in a declarative manner by writing VM deployment specifications in a Kubernetes YAML file." Why the other options are incorrect:

* B. Deploy using the vSphere Client##The vSphere Client is used to configure Namespaces, permissions, and VM classes, but actual VM creation in Supervisor Namespaces is done via kubectl + YAML.

* C. Use VCF CLI to deploy the VM##VCF CLI (kubectl vsphere login) is used only to authenticate and obtain context, not to create VMs.

* D. Log in to VCF Automation Service Broker##This is used for vRealize Automation/Aria Automation integration, not for direct Supervisor Namespace VM creation.

NEW QUESTION # 60

An administrator is tasked with adding a 96-core VMware ESX host to a VMware vSphere Foundation (VVF) 9.0 vCenter cluster. The vCenter has been previously licensed for 1024 cores and the existing hosts equal 960 cores. The administrator adds the host to the vCenter cluster and places the cluster back into production.

What issue will occur if the administrator performs no additional actions to this vCenter?

- A. The new ESX host will operate in evaluation mode until more capacity is added to the license to license the host. If the host is not licensed when the evaluation period expires, it is disconnected from the vCenter instance.
- B. The new ESX host will operate in evaluation mode until more capacity is added to the license to license the host. If the host is not licensed when the evaluation period expires, the host will be limited to 64 cores until 32 cores or greater is added to the license.
- C. The new ESX host has been limited to 64 cores until more capacity is added to the license to license the host. Once 32

cores or greater is added to the license, the full 96 cores of the new host will be useable.

- D. No issue will occur. The new host was added to the vCenter cluster successfully and will operate for the valid period of the applied license.

Answer: A

Explanation:

The vSphere Foundation 9.0 licensing model uses per-core licensing.

- * Current license covers 1024 cores.
- * Existing hosts = 960 cores, leaving 64 cores licensed.
- * Adding a 96-core host # 32 cores exceed the license.

Result:

- * The new host runs in evaluation mode.
- * If not licensed after the evaluation period, the host is disconnected from vCenter.

Other options:

- * A. Limited to 64 cores # Not how VMware licensing enforcement works.
- * B. Limited to 64 cores until license upgrade # Incorrect; VMware does not partially disable cores.
- * D. No issue # Incorrect; licensing compliance will cause issues.

NEW QUESTION # 61

An administrator is tasked to optimize storage utilization in an existing VMware vSAN Original Storage Architecture (OSA) cluster. The cluster has the following configuration:

- * Eight-node cluster with 1 disk group per node.
- * Virtual machines (VMs) are configured with 1 failure - RAID-1 storage policy.
- * Storage utilization is at 70%.

Which action can the administrator take to reduce the existing storage utilization with the minimum impact to the cluster?

- A. Enable Compression only on the cluster.
- B. Change the storage policy to 3 failure - RAID-1.
- **C. Change the storage policy to 2 failure - RAID-6.**
- D. Enable Deduplication and Compression on the cluster.

Answer: C

Explanation:

In vSAN Original Storage Architecture (OSA) cluster, the choice of storage policy directly impacts storage efficiency and resilience:

- * Current Setup:
- * Eight-node cluster, 1 disk group per node.
- * VMs are using FTT=1 RAID-1 (mirroring) policy.
- * Storage utilization is already at 70%.
- * RAID-1 (Mirroring):
- * Each piece of data is mirrored, requiring 2x storage capacity.
- * Space efficiency ~50%.
- * RAID-6 (Erasure Coding, FTT=2):
- * Requires a minimum of 6 hosts, satisfied here with 8.
- * Uses erasure coding instead of full mirroring, giving ~67% space efficiency.
- * Provides resilience against 2 host failures while using less space than RAID-1.

Thus, switching from RAID-1 FTT=1 to RAID-6 FTT=2 reduces overall storage utilization while still improving resilience.

Why not the other options?

- * A. Enable Deduplication and Compression ## In OSA, enabling this requires a cluster-wide disk group reformat, which is disruptive and not the minimal impact choice.
- * B. Change policy to 3 failure - RAID-1 ## Increases redundancy but consumes much more capacity, worsening utilization.
- * C. Enable Compression only ## Not available in OSA (only in ESA). OSA supports deduplication + compression together, not compression-only.
- * D. Change to 2 failure - RAID-6 ## Meets resilience requirements, reduces storage usage, and is supported on 8-node OSA clusters.

NEW QUESTION # 62

Which VMware Cloud Foundation (VCF) Operations for Logs capability facilitates root cause analysis and troubleshooting?

- A. Log Forwarding
- B. Dashboarding
- C. Log Querying
- D. Alerting

Answer: C

Explanation:

The VCF Operations for Logs capability most useful for root cause analysis and troubleshooting is Log Querying.

* Allows searching, filtering, and correlating log events to diagnose issues.

* Log Forwarding (A) # Sends logs elsewhere, not analysis.

* Alerting (B) # Notifies about issues but does not provide investigation details.

* Dashboarding (C) # Provides visualization, but root cause analysis requires queries.

NEW QUESTION # 63

An administrator is tasked to create a new storage policy for an eight-node VMware vSAN Original Storage Architecture (OSA) cluster.

The following specifications have been provided:

* Tolerate up to two host failures.

* Ensure maximum usable capacity.

Which storage policy settings must the administrator configure?

- A. 2 failures - RAID-5
- B. 3 failures - RAID-1
- C. 1 failure - RAID-5
- D. 1 failure - RAID-1

Answer: A

Explanation:

For an 8-node vSAN OSA cluster, the administrator needs a storage policy that:

* Tolerates 2 host failures, and

* Provides maximum usable capacity.

* RAID-5/6 (erasure coding) is more capacity-efficient than RAID-1 mirroring.

* To tolerate 2 failures, the correct policy is RAID-5 with FTT=2.

* RAID-1 (mirroring) would consume far more capacity, reducing usable space.

Other options:

* A. 1 failure - RAID-1 # Only tolerates one failure.

* C. 3 failures - RAID-1 # Provides higher resilience but uses much more capacity, not maximum efficiency.

* D. 1 failure - RAID-5 # Tolerates only one failure.
