

# Free Workday-Prism-Analytics Learning Cram & Learning Workday-Prism-Analytics Mode

## What is Workday Prism Analytics?

P.S. Free & New Workday-Prism-Analytics dumps are available on Google Drive shared by PassSureExam:  
[https://drive.google.com/open?id=1tXjLu\\_9lmQxl-L-kweIATchJ0Hw1TQO7](https://drive.google.com/open?id=1tXjLu_9lmQxl-L-kweIATchJ0Hw1TQO7)

We offer a money-back guarantee if you fail despite proper preparation and using our product (conditions are mentioned on our guarantee page). This feature gives you the peace of mind to confidently prepare for your Workday Pro Prism Analytics Exam (Workday-Prism-Analytics) certification exam. Our Workday Workday-Prism-Analytics exam dumps are available for instant download right after purchase, allowing you to start your Workday Pro Prism Analytics Exam (Workday-Prism-Analytics) preparation immediately.

Our Workday Workday-Prism-Analytics exam dumps give help to give you an idea about the actual Workday Pro Prism Analytics Exam (Workday-Prism-Analytics) exam. You can attempt multiple Workday Pro Prism Analytics Exam (Workday-Prism-Analytics) exam questions on the software to improve your performance. PassSureExam has many Workday Pro Prism Analytics Exam (Workday-Prism-Analytics) practice questions that reflect the pattern of the real Workday Pro Prism Analytics Exam (Workday-Prism-Analytics) exam. PassSureExam allows you to create a Workday Pro Prism Analytics Exam (Workday-Prism-Analytics) exam dumps according to your preparation. It is easy to create the Workday Workday-Prism-Analytics practice questions by following just a few simple steps. Our Workday-Prism-Analytics exam dumps are customizable based on the time and type of questions.

## Learning Workday-Prism-Analytics Mode - Workday-Prism-Analytics Test Book

The Channel Partner Program Workday Pro Prism Analytics Exam Workday-Prism-Analytics certification enables you to move ahead in your career later. With the Workday Workday-Prism-Analytics certification exam you can climb up the corporate ladder

faster and achieve your professional career objectives. Do you plan to enroll in the Workday Pro Prism Analytics Exam Workday-Prism-Analytics Certification Exam? Looking for a simple and quick way to crack the Workday Workday-Prism-Analytics test?

## Workday Pro Prism Analytics Exam Sample Questions (Q51-Q56):

### NEW QUESTION # 51

What is the primary purpose of window functions in Prism?

- A. To provide row-level access control.
- B. To manipulate strings and dates within a query.
- C. To filter rows based on specified conditions.
- **D. To perform calculations across a set of rows related to the current row while partitioning the data.**

**Answer: D**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Window functions in Workday Prism Analytics are a powerful feature used in dataset transformations to perform advanced calculations. According to the official Workday Prism Analytics study path documents, the primary purpose of window functions is to perform calculations across a set of rows related to the current row while partitioning the data. These functions allow users to compute values such as running totals, rankings, or aggregations (e.g., SUM, COUNT, RANK) within a defined "window" of rows, which can be partitioned by specific columns and ordered as needed. Window functions operate without collapsing the dataset (unlike group-by aggregations), preserving the original row structure while adding calculated results.

The other options do not describe the purpose of window functions:

A: To provide row-level access control: Row-level access control is managed through security domains and policies, not window functions.

B: To manipulate strings and dates within a query: String and date manipulations are handled by other functions (e.g., CONCAT, DATEADD), not window functions.

C: To filter rows based on specified conditions: Filtering is achieved using WHERE clauses or filter stages, not window functions. Window functions are essential for complex analytical calculations, such as ranking employees within a department or calculating cumulative totals, making them a key tool in Prism's data transformation capabilities.

### NEW QUESTION # 52

The Prism use case is to classify workers based on their pay. You must create a field that evaluates worker pay and returns a value that represents various pay ranges. How would you add this field for inclusion on the Prism data source?

- A. Build an Evaluate Expression calculated field on your final Prism business object to evaluate workers against their pay.
- B. Build a CASE calculated field function on the TBL directly to ease later transformation.
- C. Add the additional field to your raw data before you ingest into Prism.
- **D. Create a derived dataset and build a CASE calculated field to classify workers against their pay.**

**Answer: D**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, classifying workers into pay ranges based on their pay requires creating a new field that evaluates the pay values and assigns them to defined ranges (e.g., "Low," "Medium," "High").

According to the official Workday Prism Analytics study path documents, the recommended approach is to create a derived dataset (DDS) and build a CASE calculated field to classify workers against their pay (option B). The CASE function in a calculated field allows users to define conditional logic (e.g., CASE WHEN pay < 50000 THEN "Low" WHEN pay < 100000 THEN "Medium" ELSE "High" END), which is ideal for creating pay range classifications. This calculated field is added within a derived dataset, which can then be published as a Prism data source, making the new field available for reporting and analytics.

The other options are not optimal:

\* A. Add the additional field to your raw data before you ingest into Prism: Modifying raw data outside Prism is unnecessary and less flexible, as Prism's transformation capabilities (like CASE) are designed for such tasks.

\* C. Build a CASE calculated field function on the TBL directly to ease later transformation: Calculated fields cannot be created directly on a table (TBL) in Prism Analytics; they must be defined in a derived dataset.

\* D. Build an Evaluate Expression calculated field on your final Prism business object to evaluate workers against their pay: Prism Analytics does not use "Prism business objects" for calculated fields, and "Evaluate Expression" is not a standard function; this option is not applicable.

Using a CASE calculated field in a derived dataset provides a flexible and maintainable way to classify workers by pay ranges, ensuring the field is included in the final Prism data source.

Workday Prism Analytics Study Path Documents, Section: Data Prep and Transformation, Topic: Creating Calculated Fields with CASE Functions Workday Prism Analytics Training Guide, Module: Data Prep and Transformation, Subtopic: Classifying Data Using Calculated Fields in Derived Datasets

### NEW QUESTION # 53

A Prism data administrator is ready to create a Prism data source. As data is updated in Prism, the goal is to update the data in the Prism data source concurrently, enabling immediate incremental updates. How should the administrator create the Prism data source?

- A. Publish a derived dataset with the Prism: Default to Dataset Access Domain.
- **B. Create a table and select the Enable for Analysis checkbox.**
- C. Set Data Source Security on a derived dataset and select Publish.
- D. Create a table and select Publish.

**Answer: B**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, creating a Prism data source that supports immediate incremental updates as data is updated in Prism requires a specific configuration. According to the official Workday Prism Analytics study path documents, the administrator should create a table and select the Enable for Analysis checkbox (option A). The "Enable for Analysis" option, when selected during table creation, allows the table to be used directly as a Prism data source with real-time updates. This setting ensures that as data in the table is updated (e.g., through a Data Change task), the changes are immediately reflected in the Prism data source, enabling incremental updates without the need for republishing. This is particularly useful for scenarios requiring near- real-time data availability in reporting or analytics.

The other options do not achieve the goal of immediate incremental updates:

\* B. Create a table and select Publish: Publishing a table creates a static Prism data source, but updates to the table require republishing, which does not support immediate incremental updates.

\* C. Publish a derived dataset with the Prism: Default to Dataset Access Domain: Publishing a derived dataset creates a data source, but updates to the underlying data require republishing the dataset, which is not concurrent or incremental.

\* D. Set Data Source Security on a derived dataset and select Publish: Setting security and publishing a derived dataset follows the same process as option C, requiring republishing for updates, which does not meet the requirement for immediate updates. Selecting the "Enable for Analysis" checkbox when creating a table ensures the Prism data source supports concurrent, incremental updates as data changes in Prism.

### NEW QUESTION # 54

You want to remove data within a Prism data source without deleting any dependent custom reports. What task can you use to do this?

- **A. Delete Published Rows**
- B. Delete Dataset
- C. Inactivate Dataset
- D. Unpublish Dataset

**Answer: A**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, removing data from a Prism data source (PDS) without affecting dependent custom reports requires a careful approach to preserve the data source's structure and dependencies.

According to the official Workday Prism Analytics study path documents, the task to use is Delete Published Rows (option D). This task removes the data rows within the Prism data source while keeping the data source's metadata (e.g., field definitions) and structure intact. Since custom reports depend on the data source's structure rather than the specific data rows, deleting the published rows will not break the reports. After deleting the rows, you can republish the dataset with updated data, and the reports will continue to function with the new data, assuming the structure remains unchanged.

The other options are incorrect:

- \* A. Inactivate Dataset: Inactivating a dataset disables it but does not remove data from the published data source, and it may still affect reports by making the data source inaccessible.
- \* B. Delete Dataset: Deleting the dataset entirely will also delete the Prism data source, breaking any dependent custom reports.
- \* C. Unpublish Dataset: Unpublishing the dataset removes the Prism data source, which will break dependent reports until the dataset is republished.

The Delete Published Rows task ensures that data is removed from the Prism data source without impacting the dependent custom reports, allowing for seamless data updates.

References:

Workday Prism Analytics Study Path Documents, Section: Publishing and Visualizing Data, Topic: Managing Data in Prism Data Sources Workday Prism Analytics Training Guide, Module: Publishing and Visualizing Data, Subtopic: Removing Data Without Breaking Report Dependencies

### NEW QUESTION # 55

The final derived dataset in a Prism pipeline is complete and ready to publish. What should be done prior to publishing?

- A. Add a Group By stage to the final derived dataset to add summary calculations.
- B. Create a derived dataset with the PDS suffix.
- **C. Edit the Dataset API Name to reflect in the name of the Prism data source.**
- D. Create a table without the Enable for Analysis checkbox selected.

**Answer: C**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, before publishing a derived dataset as a Prism data source (PDS), it's important to ensure that the dataset is properly configured for downstream use. According to the official Workday Prism Analytics study path documents, one key step to take prior to publishing is to edit the Dataset API Name to reflect in the name of the Prism data source (option D). The Dataset API Name determines the name of the published Prism data source, which is used in reporting, discovery boards, and integrations. Setting a meaningful and descriptive API name (e.g., "Expense\_Reports\_by\_Location") ensures that the data source is easily identifiable and aligns with naming conventions, improving usability and manageability in the Workday ecosystem. This step is a best practice to avoid confusion and ensure clarity for report writers and analysts.

The other options are not required or relevant:

- \* A. Add a Group By stage to the final derived dataset to add summary calculations: Adding a Group By stage is not mandatory unless the use case specifically requires summarizations, which is not indicated here.
  - \* B. Create a table without the Enable for Analysis checkbox selected: Creating a new table is unnecessary, as the dataset is already complete, and the "Enable for Analysis" checkbox is relevant for real-time updates, not a requirement for publishing a derived dataset.
  - \* C. Create a derived dataset with the PDS suffix: Creating a new dataset is not needed, as the final derived dataset is already prepared, and adding a "PDS" suffix is not a required step for publishing.
- Editing the Dataset API Name ensures the Prism data source has a clear and meaningful name, facilitating its use in reporting and analytics.
