Frequent JN0-105 Updates - JN0-105 Certification Dump

P.S. Free 2025 Juniper JN0-105 dumps are available on Google Drive shared by FreePdfDump: https://drive.google.com/open?id=1uYkifm4qpAXM3yV5AYgwiRJG57s8hm9c

To ensure a more comfortable experience for users of JN0-105 test material, we offer a thoughtful package. Not only do we offer free demo services before purchase, we also provide three learning modes for users. Even if the user fails in the Junos, Associate (JNCIA-Junos) exam dumps, users can also get a full refund of our JN0-105 quiz guide so that the user has no worries. With easy payment and thoughtful, intimate after-sales service, believe that our JN0-105 Exam Dumps will not disappoint users. Last but not least, our worldwide service after-sale staffs will provide the most considerable and comfortable feeling for you in twenty -four hours a day, as well as seven days a week incessantly.

During the learning process on our JN0-105 study materials, you can contact us anytime if you encounter any problems. The staff of JN0-105 actual exam will be online 24 hours, hoping to solve the problem in time for you. You can contact our services via email or online, as long as you leave your message, our services will give you suggestions right away. And even you have problem when you already bought our JN0-105 learning guide, we will still help you solve it.

JN0-105 Certification Dump | JN0-105 Study Center

Our Juniper JN0-105 web-based practice exam software also simulates the Junos, Associate (JNCIA-Junos) (JN0-105) environment. These Juniper JN0-105 mock exams are also customizable to change the settings so that you can practice according to your preparation needs. FreePdfDump web-based JN0-105 Practice Exam software is usable only with a good internet connection.

Juniper JN0-105 Exam Syllabus Topics:

Topic	Details
Topic 1	• Networking Fundamentals: The topic networking fundamentals covers identifying the concepts and functionality of different fundamental elements of networking.
Topic 2	• User Interfaces: This topic delves into identifying the concepts, operation, or functionality of the Junos user interface.
Topic 3	• Routing Policy and Firewall Filters: The topic of Routing Policy and Firewall Filters covers routing policy and firewall filters on Junos devices. Furthermore, the topic also deals with routing policies and firewall filters on a Junos device.
Topic 4	• Configuration Basics: Identification of the main elements for configuring Junos devices is discussed in this topic. Moreover, it describes configuring basic components of a Junos device

Juniper Junos, Associate (JNCIA-Junos) Sample Questions (Q74-Q79):

NEW QUESTION # 74
What are two types of transit traffic that traverse the forwarding plane of a Layer 3 router? (Choose two.)

- A. exception traffic
- B. multicast traffic
- C. broadcast traffic
- D. unicast traffic

Answer: B,D

Explanation:
Transit traffic that traverses the forwarding plane of a Layer 3 router includes both unicast and multicast traffic types. Unicast traffic is directed from a single source to a single destination, while multicast traffic is sent from one source to multiple destinations that are part of a multicast group. These types of traffic are efficiently routed through the network by leveraging the router's forwarding plane capabilities. Exception traffic, which requires special handling by the control plane, and broadcast traffic, which is typically limited to a single broadcast domain and not usually forwarded by Layer 3 routers, are not considered standard types of transit traffic for the forwarding plane of a router.

NEW QUESTION # 75
Which two statements about route preference in Junos are correct? (Choose two.)

- A. Both OSPF internal and OSPF AS external routes have the same preference.
- B. Both direct and local routes have the same preference.
- C. Both direct and static routes have the same preference.
- D. Both EBGP and IBGP routes have the same preference.

Answer: A,B

Explanation:
In Junos OS, route preference (also known as administrative distance) is used to determine the preferred route among multiple routes to the same destination learned via different routing protocols. Direct and local routes, which represent directly connected networks and interfaces, typically share the same low preference value, indicating high trustworthiness because they are directly connected to the router. OSPF internal routes (routes within the same OSPF area) and OSPF AS external routes (routes that are external to the OSPF autonomous system but redistributed into OSPF) also share the same preference value, although this value is higher (indicating less trust) than for direct and local routes. This distinction helps the routing engine decide which routes to use when multiple paths are available.

NEW QUESTION # 76
Which prompt indicates that you are using configuration mode?

- A. $
- B. >
- C. %
- D. #

Answer: D

Explanation:
In Junos OS, the # prompt indicates that you are in configuration mode. This mode is used for making changes to the configuration of the device.
Reference: Juniper Networks CLI Modes
"The # prompt indicates that you are in configuration mode."

NEW QUESTION # 77
You are logged in to a Junos OS device with SSH and issued the show protocols | compare command in the configuration, but no

output is shown.
Which statement is correct in this scenario?

- A. You must commit the configuration before any output will be shown.
- B. The command only works for interface configuration differences.
- C. Someone accidentally deleted the active configuration.
- D. There are no changes to the candidate configuration.

Answer: D

Explanation:
The show | compare command in Junos OS is used to display the differences between the candidate configuration and the active configuration. If no output is shown when you issue this command, it means that there are no changes between the candidate configuration and the active configuration. This indicates that the candidate configuration is identical to the active configuration, and thus no differences are displayed.
Reference: Juniper Networks Documentation on Configuration Management
"The show | compare command displays the differences between the candidate configuration and the active configuration. If there are no changes, no output is displayed."

NEW QUESTION # 78
Which two statements are true about the candidate configuration? (Choose two.)

- A. You can discard changes before committing them.
- B. You can deploy multiple changes at the same time.
- C. Candidate configuration changes are automatically applied.
- D. Multiple users cannot modify the same candidate configuration.

Answer: A,B

Explanation:
The candidate configuration in Junos OS is a temporary configuration that allows network administrators to make and stage multiple configuration changes before applying them to the device. This approach enables the deployment of multiple changes in a single operation, ensuring that all configurations work together as intended before making them active. Additionally, the candidate configuration can be discarded if the administrator decides not to apply the staged changes, allowing for a "trial and error" approach without affecting the currently active configuration. This feature provides flexibility and reduces the risk of disruptive changes to the network.

NEW QUESTION # 79
.....

FreePdfDump is engaged in studying valid exam simulation files with high passing rate many years. If you want to find valid Juniper JN0-105 exam simulations, our products are helpful for you. Our Juniper JN0-105 Exam Simulations will assist you clear exams and apply for international companies or better jobs with better benefits in the near future.
