

Frequent PAP-001 Updates | PAP-001 New Braindumps Free

In order to allow our customers to better understand our PAP-001 quiz prep, we will provide clues for customers to download in order to understand our PAP-001 exam torrent in advance and see if our products are suitable for you. We have free demo on the web for you to download. Our PAP-001 Exam Guide deliver the most important information in a simple, easy-to-understand language that you can learn efficiently learn with high quality. Whether you are a student or an in-service person, our PAP-001 exam torrent can adapt to your needs.

Dumpleader can satisfy the fundamental demands of candidates with concise layout and illegible outline of our PAP-001 exam questions. We have three versions of PAP-001 study materials: the PDF, the Software and APP online and they are made for different habits and preference of you, Our PDF version of PAP-001 Practice Engine is suitable for reading and printing requests. And i love this version most also because that it is easy to take with and convenient to make notes on it.

PAP-001 New Braindumps Free | Valid PAP-001 Test Practice

Keep making progress is a very good thing for all people. If you try your best to improve yourself continuously, you will that you will harvest a lot, including money, happiness and a good job and so on. The PAP-001 preparation exam from our company will help you keep making progress. Choosing our PAP-001 Study Material, you will find that it will be very easy for you to overcome your shortcomings and become a persistent person. Our PAP-001 exam dumps will lead you to success!

Ping Identity Certified Professional - PingAccess Sample Questions (Q64-Q69):

NEW QUESTION # 64

Which two browsers are supported for the PingAccess Admin console? (Choose 2 answers.)

- A. Microsoft Edge
- B. Apple Safari
- C. Google Chrome
- D. Opera
- E. Brave

Answer: A,C

Explanation:

PingAccess officially supports Google Chrome and Microsoft Edge for the administrative console. Other browsers (Safari, Opera, Brave) may work but are not officially supported.

Exact Extract:

"The PingAccess administrative console is supported on current versions of Google Chrome and Microsoft Edge."

* Option A (Safari) is not officially supported.

- * Option B (Opera) is not supported.
 - * Option C (Google Chrome) is correct.
 - * Option D (Microsoft Edge) is correct.
 - * Option E (Brave) is not officially supported.

NEW QUESTION # 65

An administrator must protect a configuration by changing the default key. Which script can be used to meet this goal?

- A. db-passwd-rotate.bat
- B. memoryoptions.bat
- C. obfuscate.bat
- D. run.bat

Answer: C

Explanation:

PingAccess uses obfuscated keys to secure sensitive configuration values (like passwords). The obfuscate.bat (Windows) or obfuscate.sh (Linux) script is used to generate a new key and protect sensitive data.

Exact Extract:

"Use obfuscate.[bat/sh] to generate a new obfuscation key for protecting configuration values."

- * Option A (db-passwd-rotate.bat) is not a valid PingAccess script.
- * Option B (memoryoptions.bat) configures JVM memory, not encryption.
- * Option C (run.bat) starts PingAccess.
- * Option D (obfuscate.bat) is correct - it is used to protect sensitive configuration.

NEW QUESTION # 66

Any user who accesses an application must be in sales unless the user is a manager in the marketing department. The administrator creates the following web session rules:

- * (A) Look for department = sales
- * (B) Look for department = marketing
- * (C) Look for job_title = manager

Which additional actions should be taken to properly enforce this requirement?

- A. Create a Rule Set (D) to accept ANY (A) (B) (C) # Add Rule Set (D) to the resource
- B. Create a Rule Set (D) to accept ALL (A) (B AND C) # Add Rule Set (D) to the resource
- C. Create a Rule Set (D) to accept ALL (A) # Create a Rule Set (E) to accept ANY (B) (C) # Create a Rule Set Group (F) to accept ALL (D) (E) # Add Rule Set Group (F) to the resource
- D. Create a Rule Set (D) to accept ANY (A) # Create a Rule Set (E) to accept ALL (B) (C) # Create a Rule Set Group (F) to accept ANY (D) (E) # Add Rule Set Group (F) to the resource

Answer: D

Explanation:

The requirement is:

- * Allow access if user is in sales
- * OR if user is in marketing AND is a manager

This is logically represented as:

(A) OR (B AND C)

To configure this in PingAccess:

- * Rule Set (D) = ANY (A)
- * Rule Set (E) = ALL (B, C)
- * Rule Set Group (F) = ANY (D, E)
- * Assign Group (F) to the resource

This exactly matches Option D.

- * Option A is incorrect - requires both A and (B AND C), which is stricter than the requirement.
- * Option B is incorrect - ANY(A, B, C) would allow users in marketing or managers without requiring both.
- * Option C is incorrect - it uses ALL(D, E), which would require both conditions instead of OR.

* Option Dis correct - it models (A OR (B AND C)).

NEW QUESTION # 67

Anycompany has several applications that need to load images and fonts from www.anycompany.com. Users are currently getting CORS errors. How should the Cross-Origin Request rule be set to allow secure access?

- A. Allowed Origins to * and enable the Allow Credentials option
- B. Allowed Origins value for each of the listed domains
- **C. Allowed Origins to www.anycompany.com and enable the Allow Credentials option**
- D. Allowed Origins to *.anycompany.com and disable the Allow Credentials option

Answer: C

Explanation:

To prevent CORS errors, administrators must configure a Cross-Origin Request (CORS) Processing Rule.

The secure practice is to allow the specific trusted domain (www.anycompany.com) and, when cookies or credentials are required, to enable Allow Credentials.

Exact Extract:

"For secure CORS, specify exact origins rather than wildcards. Enable 'Allow Credentials' when client-side resources must include cookies or authentication data."

* Option A is incomplete - multiple values are possible, but in this case only www.anycompany.com is required.

* Option B is less secure - using a wildcard (*.anycompany.com) broadens exposure unnecessarily.

* Option C is insecure - * with credentials is disallowed by CORS specifications.

* Option D is correct - restricts access to the trusted domain and allows credentialed requests.

Reference: PingAccess Administration Guide - Cross-Origin Request Rule

NEW QUESTION # 68

A protected web application requires that additional attributes be provided once the user is authenticated.

Which two steps must the administrator perform to meet this requirement? (Choose 2 answers.)

- A. Request that the token provider update the access token with the additional attributes.
- B. Update the Site Authenticator.
- **C. Update the Web Session.**
- **D. Update the Identity Mapping.**
- E. Request that the token provider update the ID token with the additional attributes.

Answer: C,D

Explanation:

When applications require additional attributes:

* The Web Session must be configured to retrieve those attributes from the token provider (OIDC or PingFederate).

* The Identity Mapping must be updated to forward those attributes to the application (e.g., as headers).

Exact Extract:

"Web sessions define how user attributes are retrieved from the token provider. Identity mappings determine how those attributes are inserted into requests to applications."

* Option A is not necessarily required; attributes can be retrieved via userinfo endpoint or access token, not only ID tokens.

* Option B is correct - Identity Mappings must be updated to pass attributes to the app.

* Option C is incorrect - Site Authenticators define how PingAccess authenticates to apps, not attribute handling.

* Option D is incorrect unless the architecture specifically requires access token updates; PingAccess often uses the Web Session to fetch attributes.

* Option E is correct - Web Session must be updated to retrieve additional attributes.
