CompTIA A+ Certification Exam: Core 2 is a comprehensive exam that covers a wide range of topics. It includes questions on hardware and software installation, configuration and maintenance, network troubleshooting, security protocols, and mobile devices. 220-1102 Exam is designed to test the ability of the candidate to identify and troubleshoot issues related to these topics.

CompTIA A+ Certification Exam: Core 2 Sample Questions (Q692-Q697):

NEW QUESTION # 692

A user needs assistance installing software on a Windows PC but will not be in the office. Which of the following solutions would a technician MOST likely use to assist the user without having to install additional software?

- A. RDP
- B. VPN
- C. SSH
- **D. MSRA**

Answer: D

Explanation:

Explanation

MSRA stands for Microsoft Remote Assistance, and it is a feature that allows a technician to remotely view and control another user's Windows PC with their permission. MSRA is built-in to Windows and does not require any additional software installation. To use MSRA, the technician and the user need to follow these steps:

On the user's PC, type msra in the search box on the taskbar and select Invite someone to connect to your PC and help you, or offer to help someone else.

Select Save this invitation as a file and choose a location to save the file. This file contains a password that the technician will need to connect to the user's PC.

Send the file and the password to the technician via email or another secure method.

On the technician's PC, type msra in the search box on the taskbar and select Help someone who has invited you.

Select Use an invitation file and browse to the location where the file from the user is saved. Enter the password when prompted.

The user will see a message asking if they want to allow the technician to connect to their PC. The user should select Yes.

The technician will see the user's desktop and can request control of their PC by clicking Request control on the top bar. The user should allow this request by clicking Yes.

The technician can now view and control the user's PC and assist them with installing software.

NEW QUESTION # 693

A technician is editing the hosts file on a few PCs in order to block certain domains. Which of the following would the technician need to execute after editing the hosts file?

- A. Clear the browser cache.
- B. Add a new network adapter.
- C. Enable promiscuous mode.
- **D. Reset the network adapter.**

Answer: D

Explanation:

Resetting the network adapter is the best way to apply the changes made to the hosts file on a few PCs. The hosts file is a text file that maps hostnames to IP addresses and can be used to block certain domains by redirecting them to invalid or local addresses. Resetting the network adapter will clear the DNS cache and force the PC to use the new entries in the hosts file.

NEW QUESTION # 694

A user installed a new computer game. Upon starting the game, the user notices the frame rates are low. Which of the following

should the user upgrade to resolve the issue?

- **A. Graphics card**
- B. Monitor
- C. Hard drive
- D. Random-access memory

Answer: A

Explanation:

A graphics card, also known as a video card or a GPU (graphics processing unit), is a component that can affect the performance of a computer game. A graphics card is responsible for rendering and displaying graphics on the screen, such as images, animations, and effects. A computer game may require a high level of graphics processing power to run smoothly and achieve high frame rates, which are the number of frames per second (FPS) that the game can display. Upgrading to a better graphics card can improve the performance of a computer game by increasing its graphics quality and frame rates. Hard drive, random-access memory, and monitor are not components that can directly improve the performance of a computer game.

NEW QUESTION # 695

A user tries to access commonly used web pages but is redirected to unexpected websites. Clearing the web browser cache does not resolve the issue. Which of the following should a technician investigate NEXT to resolve the issue?

- A. Verify the routing tables.
- B. Enable firewall ACLs.
- **C. Examine the localhost file entries.**
- D. Update the antivirus definitions.

Answer: C

Explanation:

A possible cause of the user being redirected to unexpected websites is that the localhost file entries have been modified by malware or hackers to point to malicious or unwanted websites. The localhost file is a text file that maps hostnames to IP addresses and can override DNS settings. By examining the localhost file entries, a technician can identify and remove any suspicious or unauthorized entries that may cause the redirection issue. Enabling firewall ACLs may not resolve the issue if the firewall rules do not block the malicious or unwanted websites. Verifying the routing tables may not resolve the issue if the routing configuration is correct and does not affect the web traffic. Updating the antivirus definitions may help prevent future infections but may not remove the existing malware or changes to the localhost file.

NEW QUESTION # 696

A user calls a technician and asks for help with setting up a connection to a printer application. The technician has never dealt with secure print but has directions that will help guide the user. Which of the following techniques should the technician use?

- A. Use technical jargon so the user is confident in the technician's skills.
- B. Express to the user that this is the technician's first experience with the application.
- C. Send the user the directions to connect.
- **D. Maintain a positive attitude and project confidence.**

Answer: D
