

From NetSec-Pro Reliable Exam Tips to Palo Alto Networks Network Security Professional, Easest Way to Pass

BTW, DOWNLOAD part of ExamBoosts NetSec-Pro dumps from Cloud Storage: https://drive.google.com/open?id=1pa1gd-zwFXvkL1xa1sl-CKNDS_oMhK-c

ExamBoosts is professional and is built for nearly all IT certification examinations. It not only ensures the quality, best service, but also the cheap price. Having ExamBoosts, you will not worry about NetSec-Pro certification exams and answers. Moreover, ExamBoosts can provide NetSec-Pro Latest Dumps demo and NetSec-Pro study guide for you, which will help you pass NetSec-Pro exam in a short time and let you be close to your dream to become an elite.

If you have ExamBoosts NetSec-Pro Exam Questions, you don't need a person to help you with reading and explaining the facts. This Palo Alto Networks NetSec-Pro exam questions material is available in pdf so that anyone can study it without any difficulty. On the other hand, to understand real exam's format, you can easily take ExamBoosts NetSec-Pro Practice Exams. These Palo Alto Networks Network Security Professional (NetSec-Pro) practice tests help you know how much you can score and if it is the right time to apply for the Palo Alto Networks Network Security Professional (NetSec-Pro) certification exam or if you should wait for a little.

Professional NetSec-Pro Reliable Exam Tips - 100% Pass NetSec-Pro Exam

ExamBoosts guarantee the best valid and high quality Palo Alto Networks study guide which you won't find any better one available. NetSec-Pro training pdf will be the right study reference if you want to be 100% sure pass and get satisfying results. From our NetSec-Pro free demo which allows you free download, you can see the validity of the questions and format of the NetSec-Pro actual test. In addition, the price of the NetSec-Pro dumps pdf is reasonable and affordable for all of you.

Palo Alto Networks NetSec-Pro Exam Syllabus Topics:

Topic	Details

Topic 1	• NGFW and SASE Solution Functionality: This part assesses the knowledge of firewall administrators and network architects on the functions of various Palo Alto Networks firewalls including Cloud NGFWs, PA-Series, CN-Series, and VM-Series. It covers perimeter and core security, zone security and segmentation, high availability, security and NAT policy implementation, as well as monitoring and logging. Additionally, it includes the functionality of Prisma SD-WAN with WAN optimization, path and NAT policies, zone-based firewall, and monitoring, plus Prisma Access features such as remote user and network configuration, application access, policy enforcement, and logging. It also evaluates options for managing Strata and SASE solutions through Panorama and Strata Cloud Manager.
Topic 2	• Connectivity and Security: This part measures the skills of network engineers and security analysts in maintaining and configuring network security across on-premises, cloud, and hybrid environments. It covers network segmentation, security and network policies, monitoring, logging, and certificate management. It also includes maintaining connectivity and security for remote users through remote access solutions, network segmentation, security policy tuning, monitoring, logging, and certificate usage to ensure secure and reliable remote connections.
Topic 3	• Platform Solutions, Services, and Tools: This section measures the expertise of security engineers and platform administrators in Palo Alto Networks NGFW and Prisma SASE products. It involves creating security and NAT policies, configuring Cloud-Delivered Security Services (CDSS) such as security profiles, User-ID and App-ID, decryption, and monitoring. It also covers the application of CDSS for IoT security, Enterprise Data Loss Prevention, SaaS Security, SD-WAN, GlobalProtect, Advanced WildFire, Threat Prevention, URL Filtering, and DNS security. Furthermore, it includes aligning AIOps with best practices through administration, dashboards, and Best Practice Assessments.
Topic 4	• Network Security Fundamentals: This section of the exam measures skills of network security engineers and covers key concepts such as application layer inspection for Strata and SASE products, differentiating between slow and fast path packet inspection, and the use of decryption methods including SSL Forward Proxy, SSL Inbound Inspection, SSH Proxy, and scenarios where no decryption is applied. It also includes applying network hardening techniques like Content-ID, Zero Trust principles, User-ID (including Cloud Identity Engine), Device-ID, and network zoning to enhance security on Strata and SASE platforms.
Topic 5	• GFW and SASE Solution Maintenance and Configuration: This domain evaluates the skills of network security administrators in maintaining and configuring Palo Alto Networks hardware firewalls, VM-Series, CN-Series, and Cloud NGFWs. It includes managing security policies, profiles, updates, and upgrades. It also covers adding, configuring, and maintaining Prisma SD-WAN including initial setup, pathing, monitoring, and logging. Maintaining and configuring Prisma Access with security policies, profiles, updates, upgrades, and monitoring is also assessed.

Palo Alto Networks Network Security Professional Sample Questions (Q30-Q35):

NEW QUESTION # 30

A network security engineer needs to implement segmentation but is under strict compliance requirements to place security enforcement as close as possible to the private applications hosted in Azure. Which deployment style is valid and meets the requirements in this scenario?

- A. On a PA-Series NGFW, configure several Layer 3 zones with Layer 3 interfaces assigned to logically segment the network.
- B. On a PA-Series NGFW, configure several Layer 2 zones with Layer 2 interfaces assigned to logically segment the network.
- C. On a VM-Series NGFW, configure several Layer 2 zones with Layer 2 interfaces assigned to logically segment the network.
- D. On a VM-Series NGFW, configure several Layer 3 zones with Layer 3 interfaces assigned to logically segment the network.

Answer: D

Explanation:

In cloud environments like Azure, the VM-Series NGFW is deployed to create Layer 3 segmentation zones closest to the application workloads.

"In Azure, deploy VM-Series firewalls in Layer 3 mode to enforce security policies closest to private applications, meeting strict compliance and segmentation requirements." (Source: VM-Series in Public Clouds) Layer 3 segmentation ensures security policies are enforced at the right boundary to isolate traffic within Azure's virtual networks.

NEW QUESTION # 31

Which two types of logs must be forwarded to Strata Logging Service for IoT Security to function?

(Choose two.)

- A. URL Filtering
- B. Enhanced application
- C. WildFire
- D. Threat

Answer: B,D

Explanation:

For IoT Security to accurately classify and monitor IoT devices, the following logs must be forwarded to Strata Logging Service:

Enhanced application logs- provide detailed application usage and behaviors, essential for profiling device types and roles.

"Enhanced Application logs provide additional context on IoT device behavior and usage patterns, and must be forwarded to Strata Logging Service for IoT Security to build accurate Device-ID profiles." (Source: IoT Security Logging Requirements) Threat logs- essential for detecting suspicious or malicious activities by IoT devices.

"Threat logs are critical for identifying potential exploits or suspicious activities involving IoT devices and are required for accurate threat visibility within IoT Security." (Source: IoT Security Logs) These logs collectively ensure accurate device classification and real-time threat visibility.

NEW QUESTION # 32

An NGFW administrator is updating PAN-OS on company data center firewalls managed by Panorama. Prior to installing the update, what must the administrator verify to ensure the devices will continue to be supported by Panorama?

- A. Panorama is running the same or newer PAN-OS release as the one being installed.
- B. Panorama is configured as the primary device in the log collecting group for the data center firewalls.
- C. All devices are in the same template stack.
- D. Device telemetry is enabled.

Answer: A

Explanation:

The firewall must be running a PAN-OS version that is supported by Panorama. This means that Panorama must be running the same or a newer PAN-OS version as the one being installed on the firewalls to maintain compatibility.

"Before you upgrade the firewall, ensure that Panorama is running the same or a later PAN-OS version than the firewall. Panorama must always be at the same or a higher version to maintain compatibility." (Source: Panorama Admin Guide - Upgrade Process)

NEW QUESTION # 33

Which subscription sends non-file format-based traffic that matches Data Filtering Profile criteria to a cloud service to render a verdict?

- A. Advanced URL Filtering
- B. Enterprise DLP
- C. Advanced WildFire
- D. SaaS Security Inline

Answer: B

Explanation:

Enterprise DLP uses cloud analysis to inspect and classify sensitive data in non-file-based formats (e.g., in-line data streams, SaaS

communications).

"Enterprise DLP inspects data in non-file-based traffic flows, forwarding suspicious data patterns to the cloud for classification and verdicts." (Source: Enterprise DLP Overview) The other services focus on file-based scanning (WildFire), URL access control (Advanced URL Filtering), or inline SaaS application controls (SaaS Security Inline).

NEW QUESTION # 34

How do Cloud NGFW instances get created when using AWS centralized deployments?

- A. They replace the internet gateway service.
- **B. Selected VPCs will have Cloud NGFW workloads added to them.**
- C. Cloud NGFW is placed in a vWAN with a virtual hub.
- D. A security VPC will be created as transit gateways to push all traffic through the area.

Answer: B

Explanation:

When using AWS centralized deployments for Cloud NGFW, the service deploys NGFW instances into selected VPCs as additional workloads to secure that traffic.

"In centralized deployments, Cloud NGFW instances are deployed as security appliances within the selected VPCs, ensuring consistent traffic inspection and protection." (Source: Cloud NGFW Deployment Models) This approach minimizes complexity and ensures direct security policy enforcement within AWS.

NEW QUESTION # 35

.....

Once you ensure your grasp on the NetSec-Pro Questions and answers, evaluate your learning solving the NetSec-Pro practice tests provided by our testing engine. This innovative facility provides you a number of practice questions and answers and highlights the weak points in your learning. You can improve the weak areas before taking the actual test and thus brighten your chances of passing the exam with an excellent score. Moreover, doing these practice tests will impart you knowledge of the actual exam format and develop your command over it.
