It is very necessary for a lot of people to attach high importance to the NSK300 exam. It is also known to us that passing the exam is not an easy thing for many people, so a good study method is very important for a lot of people, in addition, a suitable study tool is equally important, because the good and suitable NSK300 reference guide can help people pass the exam in a relaxed state. We are glad to introduce the NSK300 Certification Dumps from our company to you. We believe our study materials will be very useful and helpful for all people who are going to prepare for the NSK300 exam. There are a lot of excellent experts and professors in our company. In the past years, these experts and professors have tried their best to design the NSK300 exam questions for all customers.

Netskope NSK300 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Cloud Security Concepts: This topic covers best practices, compliance requirements, and fundamental understanding of cloud security threats.
Topic 2	<ul style="list-style-type: none">Netskope Security Cloud Platform: It provides a thorough grasp of the architecture, deployment choices, and essential features of Netskope.
Topic 3	<ul style="list-style-type: none">Netskope Platform Monitoring and Troubleshooting: It focuses on monitoring Netskope's health, identifying possible problems, and successfully resolving them.
Topic 4	<ul style="list-style-type: none">Security Policy Management: One of the main competencies evaluated in this topic is the creation and management of granular security rules for cloud resources and applications.

Detailed NSK300 Answers - NSK300 Exam Details

These Netskope Certified Cloud Security Architect (NSK300) practice test questions are customizable and give real Netskope Certified Cloud Security Architect (NSK300) exam experience. Windows computers support desktop software. The web-based NSK300 Practice Exam is supported by all browsers and operating systems.

Netskope Certified Cloud Security Architect Sample Questions (Q43-Q48):

NEW QUESTION # 43

You are deploying the Netskope Client to Windows devices. The following command line would be used to install the client MSI file:

```
msiexec /I NSClient.msi token=<token> host=<host> [mode=peruserconfig] installmode=IDF [userconfiglocation=<path>] fail-close={no-  
npa|all} [autoupdate=on|off]
```

In this scenario, what is <token> referring to in the command line?

- A. a Netskope user identifier
- B. the URL of the IdP used to authenticate the users
- C. a private token given to you by the SCCM administrator
- **D. the Netskope organization ID**

Answer: D

Explanation:

In the context of deploying the Netskope Client to Windows devices, <token> in the command line refers to the Netskope organization ID. This is a unique identifier associated with your organization's account within the Netskope security cloud. It is used during the installation process to ensure that client devices are registered and managed under the correct organizational account, enabling appropriate security policies and configurations to be applied. Reference: The answer can be inferred from general knowledge about installing software clients and isn't directly available on Netskope's official resources.

NEW QUESTION # 44

You have an NG-SWG customer that currently steers all Web traffic to Netskope using the Netskope Client.

They have identified one new native application on Windows devices that is a certificate-pinned application.

Users are not able to access the application due to certificate pinning. The customer wants to configure the Netskope Client so that the traffic from the application is steered to Netskope and the application works as expected.

Which two methods would satisfy the requirements? (Choose two.)

- A. Bypass traffic using the bypass action in the Real-time Protection policy.
- B. Configure domain exceptions in the steering configuration for the domains used by the native application.
- **C. Configure the SSL Do Not Decrypt policy to not decrypt traffic for domains used by the native application.**
- **D. Tunnel traffic to Netskope and bypass traffic inspection at the Netskope proxy.**

Answer: C,D

NEW QUESTION # 45

You have enabled CASB traffic steering using the Netskope Client, but have not yet enabled a Real-time Protection policy. What is the default behavior of the traffic in this scenario?

- A. Traffic will be blocked, but not logged.
- **B. Traffic will be allowed and logged.**
- C. Traffic will be allowed, but not logged.
- D. Traffic will be blocked and logged.

Answer: B

Explanation:

In the scenario where CASB traffic steering is enabled using the Netskope Client without a Real-time Protection policy being activated, the default behavior of the traffic is to allow and log it (B). This means that the traffic will not be blocked; instead, it will be permitted to pass through and will be recorded for monitoring and analysis purposes. This default setting ensures visibility into the traffic and user activities without immediately enforcing a block, allowing for a period of observation and policy tuning before

potentially more restrictive actions are taken.

NEW QUESTION # 46

What is a Fast Scan component of Netskope Threat Detection?

- A. Machine Learning
- B. Dynamic Analysis
- C. Static Analysis
- D. Heuristic Analysis

Answer: A

Explanation:

The Fast Scan component of Netskope Threat Detection utilizes Machine Learning to quickly detect and block malware in real-time. This is part of Netskope's multi-layered security approach, which includes various engines to defend against a wide range of threats. The Fast Scan capability specifically leverages machine learning-based detection for rapid analysis and response to potential threats.

The information regarding the Fast Scan component and its use of Machine Learning can be found in the Netskope documentation, which outlines the threat protection framework and the role of machine learning in detecting and blocking malware.

NEW QUESTION # 47

You are attempting to merge two Advanced Analytics reports with DLP incidents: Report A with 3000 rows and Report B with 6000 rows. Once merged, you notice that the merged report is missing a significant number of rows.

What is causing this behavior?

- A. Filters are applied differently to dimensions and measures
- B. Visualizations have a system limit of 5000 rows.
- C. Netskope automatically deduplicates data in merged reports.
- D. Missing data is due to viewing limits.

Answer: D

Explanation:

When merging two Advanced Analytics reports in Netskope, if the merged report is missing rows, it is likely due to viewing limits within the system. Netskope's Advanced Analytics platform has limitations on the number of rows that can be viewed at once, which can result in missing data when dealing with large reports. This viewing limit ensures performance and manageability of the data within the system.

NEW QUESTION # 48

.....

As far as the top features of Lead2Passed NSK300 exam questions formats are concerned, the Netskope NSK300 desktop practice test software and web-based practice test software both are customizable and track your performance. These NSK300 practice tests are specifically designed to give you a real-time NSK300 Exam environment for preparation. You can trust both NSK300 practice test software and start preparing today. The desktop software runs on Windows computers. The web-based NSK300 practice exam is supported by all browsers and operating systems.
