P.S. Kostenlose 2025 Google Generative-AI-Leader Prüfungsfragen sind auf Google Drive freigegeben von ZertPruefung verfügbar: <https://drive.google.com/open?id=1PyiAirybgMO1FQqZ-E7VpwhZ3LY07t7z>

Wir können mit Stolz sagen, dass wir ZertPruefung professionell ist! Denn die Bestehensquote der Prüflingen, die unsere Google Generative-AI-Leader Software benutzt haben, ist unglaublich hoch. Denn unsere Tech-Gruppe ist unglaublich kompetent. Der Kundendienst ist ein sehr wichtiger Standard für eine Firma. Um den hohen Standard zu entsprechen, bieten wir 24/7 online Kundendienst, einjähriger kostenloser Google Generative-AI-Leader Aktualisierungsdienst nach dem Kauf und die Erstattungspolitik beim Durchfall. Wenn Sie wirklich Google Generative-AI-Leader bestehen möchten, wählen Sie unsere Produkte!

Google Generative-AI-Leader Prüfungsplan:

Thema	Einzelheiten
Thema 1	Google Cloud's Generative AI Offerings: This section of the exam measures the skills of Cloud Architects and highlights Google Cloud's strengths in generative AI. It emphasizes Google's AI-first approach, enterprise-ready platform, and open ecosystem. Candidates will learn about Google's AI infrastructure, including TPUs, GPUs, and data centers, and how the platform provides secure, scalable, and privacy-conscious solutions. The section also explores prebuilt AI tools such as Gemini, Workspace integrations, and AgentSpace, while demonstrating how these offerings enhance customer experience and empower developers to build with Vertex AI, RAG capabilities, and agent tooling.
Thema 2	Techniques to Improve Generative AI Model Output: This section of the exam measures the skills of AI Engineers and focuses on improving model reliability and performance. It introduces best practices to address common foundation model limitations such as bias, hallucinations, and data dependency, using methods like retrieval-augmented generation, prompt engineering, and human-in-the-loop systems. Candidates are also tested on different prompting techniques, grounding approaches, and the ability to configure model settings such as temperature and token count to optimize results.
Thema 3	Business Strategies for a Successful Generative AI Solution: This section of the exam measures the skills of Cloud Architects and evaluates the ability to design, implement, and manage enterprise-level generative AI solutions. It covers the decision-making process for selecting the right solution, integrating AI into an organization, and measuring business impact. A strong emphasis is placed on secure AI practices, highlighting Google's Secure AI Framework and cloud security tools, as well as the importance of responsible AI, including fairness, transparency, privacy, and accountability.
Thema 4	Fundamentals of Generative AI: This section of the exam measures the skills of AI Engineers and focuses on the foundational concepts of generative AI. It covers the basics of artificial intelligence, natural language processing, machine learning approaches, and the role of foundation models. Candidates are expected to understand the machine learning lifecycle, data quality, and the use of structured and unstructured data. The section also evaluates knowledge of business use cases such as text, image, code, and video generation, along with the ability to identify when and how to select the right model for specific organizational needs.

Generative-AI-Leader Deutsche, Generative-AI-Leader Online Tests

Generative-AI-Leader ist eine der Google Zertifizierungsprüfungen. IT-Fachmann mit Google Zertifikat sind sehr beliebt in der IT-Branche. Deshalb legen immer mehr Leute die Generative-AI-Leader Zertifizierungsprüfung. Jedoch ist es nicht so einfach, die Google Generative-AI-Leader Zertifizierungsprüfung zu bestehen. Wenn Sie nicht an den entsprechenden Kursen teilnehmen, brauchen Sie viel Zeit und Energie, sich auf die Prüfung vorzubereiten. Nun kann ZertPruefung Ihnen viel Zeit und Energie ersparen.

Google Cloud Certified - Generative AI Leader Exam Generative-AI-Leader Prüfungsfragen mit Lösungen (Q65-Q70):

65. Frage

A company is defining their generative AI strategy. They want to follow Google-recommended practices to increase their chances of success. Which strategy should they use?

- A. Rapid implementation strategy
- B. Multi-directional strategy
- C. Top-down strategy
- D. Bottom-up strategy

Antwort: C

Begründung:

Google Cloud often recommends a "top-down" approach for generative AI strategy. This means starting with clear business objectives and leadership alignment on how generative AI can solve critical business problems, rather than simply experimenting from the bottom up without a clear strategic direction.

66. Frage

A marketing team wants to use a foundation model to create social media and advertising campaigns. They want to create written articles and images from text. They lack deep AI expertise and need a versatile solution. Which Google foundation model should they use?

- A. Veo
- B. Gemma
- C. Imagen
- D. Gemini

Antwort: D

Begründung:

Gemini is Google's most advanced and multimodal foundation model, capable of understanding and generating various forms of content, including text and images, from a single prompt. Its versatility makes it suitable for marketing teams that need to create diverse campaign materials without deep AI expertise.

Imagen is specifically for image generation, Gemma is a family of smaller, open models, and Veo is for video generation.

67. Frage

An organization wants to use generative AI to create a chatbot that can answer customer questions about their account balances. They need to ensure that the chatbot can access previous portions of the conversation with the customer. Which prompting technique should they use?

- A. Use role prompting.
- B. Use few-shot prompting.
- C. Use prompt chaining.
- D. Use zero-shot prompting.

Antwort: C

Begründung:

Prompt chaining (or conversational memory/context management) is the technique used to maintain the conversational context. It involves feeding previous turns of a conversation (or a summary of them) back into the model along with the current user query, allowing the chatbot to "remember" and reference past interactions for coherent and contextually relevant responses, especially crucial for tasks like checking account balances that span multiple turns.

68. Frage

An order fulfillment team has an agent that automatically processes orders, updates inventory, sends shipping notifications, and handles returns. What type of agent is this?

- A. A conversational agent
- **B. A workflow agent**
- C. A customer service agent
- D. An employee productivity agent

Antwort: B

Begründung:

Generative AI agents are typically categorized based on the goal they are designed to achieve.

The agent described is performing a sequence of distinct, interconnected, operational tasks (processes orders, updates inventory, sends notifications, handles returns). These steps are typical components of a business workflow or process automation.

A Workflow Agent is an AI agent whose purpose is to automate and manage an entire business process or a complex multi-step sequence of operations that traditionally required manual handoffs between different systems or teams. It uses its large language model brain, coupled with tools (such as APIs to a CRM, Inventory database, or shipping system), to observe the state of a process (e.g., a new order), reason about the next step, and execute the necessary actions to move the process forward toward completion. Customer Service Agents (C) and Conversational Agents (D) are focused on user interaction (chatbots, virtual assistants) rather than back-end transactional automation.

Employee Productivity Agents (B) typically focus on individual tasks like drafting emails, summarizing meetings, or internal search, not automating an end-to-end operational flow like order fulfillment.

Therefore, an agent designed to automate a complete, multi-step business process like order fulfillment is correctly classified as a Workflow Agent.

(Reference: Google Cloud Generative AI training materials categorize agents based on function, with Workflow Agents being those designed to automate multi-step business processes and operational sequences.)

69. Frage

A company's development team is eager to start building generative AI solutions with Google Cloud, but has limited experience in AI development. They need to launch their gen AI solution quickly. What Google Cloud benefit would help the company achieve their goal?

- A. Google Cloud's focus on continuous improvement provides access to the latest AI tools, features, and best practices.
- B. Google Cloud's comprehensive training materials and tutorials to help developers.
- **C. Google Cloud's pre-trained models and low- and no-code AI tools and services.**
- D. Google Cloud's collaborative AI community and support forums connect developers with AI experts.

Antwort: C

Begründung:

For a team with limited AI experience needing to launch quickly, leveraging pre-trained models (foundation models) and low-code/no-code tools significantly reduces the development burden and accelerates time to market. This allows them to build and deploy generative AI solutions without requiring deep expertise from scratch. While other options are helpful, this directly addresses the need for quick launch with limited experience.

70. Frage

ZertPruefung ist eine Website, die Prüfungsressourcen den IT-leuten, die sich an der Google Generative-AI-Leader Zertifizierungsprüfung (Google Cloud Certified - Generative AI Leader Exam) beteiligen, bieten. Es gibt verschiedene Schulungsmethoden und Kurse für verschiedene Studenten. Mit der Ausbildungsmethode von ZertPruefung können die Studenten die Prüfung ganz leicht bestehen. Viele Kandidaten, die sich an der IT-Zertifizierungsprüfung beteiligt haben, haben die Google Generative-AI-Leader Zertifizierungsprüfung (Google Cloud Certified - Generative AI Leader Exam) mit Hilfe der Prüfungsfragen und Antworten von ZertPruefung sehr erfolgreich abgelegt. So genießt ZertPruefung einen guten Ruf in der IT-Branche.
