

Get Ahead in Your Career with Juniper JN0-481 Questions from TrainingDump

P.S. Free & New JN0-481 dumps are available on Google Drive shared by TrainingDump: <https://drive.google.com/open?id=1GEwgnBYDB4TPLLL2w0TZicAni5uW5N1e>

If you want to through the Juniper JN0-481 certification exam to make a stronger position in today's competitive IT industry, then you need the strong expertise knowledge and the accumulated efforts. And pass the Juniper JN0-481 exam is not easy. Perhaps through Juniper JN0-481 exam you can promote yourself to the IT industry. But it is not necessary to spend a lot of time and effort to learn the expertise. You can choose TrainingDump's Juniper JN0-481 Exam Training materials. This is training product that specifically made for IT exam. With it you can pass the difficult Juniper JN0-481 exam effortlessly.

Are you often regretful that you have purchased an inappropriate product? Unlike other platforms for selling test materials, in order to make you more aware of your needs, JN0-481 test preps provide sample questions for you to download for free. You can use the sample questions to learn some of the topics about JN0-481 learn torrent and familiarize yourself with the JN0-481 Quiz torrent in advance. If you feel that the JN0-481 quiz torrent is satisfying to you, you can choose to purchase our complete question bank. After the payment, you will receive the email sent by the system within 5-10 minutes. Click on the login to start learning immediately with JN0-481 test preps. No need to wait.

Exam JN0-481 Forum & Latest JN0-481 Study Guide

Selecting the right method will save your time and money. If you are preparing for JN0-481 exam with worries, maybe the professional exam software provided by IT experts from TrainingDump will be your best choice. Our TrainingDump aims at helping you successfully Pass JN0-481 Exam. If you are unlucky to fail JN0-481 exam, we will give you a full refund of the cost you purchased our dump to make up part of your loss. Please trust us, and wish you good luck to pass JN0-481 exam.

Juniper Data Center, Specialist (JNCIS-DC) Sample Questions (Q13-Q18):

NEW QUESTION # 13

Which statement about Juniper Apstra role-based access control is correct?

- A. The administrator role can see all permissions.
- B. The user role can create roles.
- C. The viewer role is predefined and can be deleted.
- D. The administrator role is the only predefined role.

Answer: A

Explanation:

Juniper Apstra role-based access control (RBAC) is a feature that allows you to specify access permissions for different users based on their roles. RBAC servers are remote network servers that authenticate and authorize network access based on roles assigned to individual users within an enterprise. Juniper Apstra has four predefined user roles: administrator, device_ztp, user, and viewer. The administrator role is the most powerful role, and it can see all permissions and perform all actions in the Apstra software application. The administrator role can also create, clone, edit, and delete user roles, except for the four predefined user roles, which cannot be modified. Therefore, the statement that the administrator role can see all permissions is correct.

NEW QUESTION # 14

Which two statements are correct about repairing a Juniper Apstra cabling map before deploying your blueprint? (Choose two.)

- A. Apstra can use LLDP data from the leaf devices to update the leaf-to-generic connections in the cabling map.
- B. You must manually change the cabling map to update spine-to-leaf fabric links.
- C. Apstra can use LLDP data from the spine-to-leaf fabric devices to update the connections in the cabling map.
- D. You must manually change the cabling map to update leaf-to-generic links.

Answer: A,C

Explanation:

The cabling map is a graphical representation of the physical connections between the devices in the data center fabric. It shows the status of the cables, interfaces, and BGP sessions for each device. You can use the cabling map to verify and repair the cabling before deploying your blueprint. Based on the web search results, we can infer the following statements:

Apstra can use LLDP data from the spine-to-leaf fabric devices to update the connections in the cabling map. This is true because Apstra can collect LLDP data from the devices using the Generic Graph Collector processor and use it to update the cabling map automatically.

LLDP is a protocol that allows devices to exchange information about their identity, capabilities, and neighbors. Apstra can use LLDP data from the leaf devices to update the leaf-to-generic connections in the cabling map. This is true because Apstra can also collect LLDP data from the leaf devices and use it to update the connections to the generic devices, such as routers, firewalls, or servers. Generic devices are devices that are not managed by Apstra but are part of the data center fabric.

You must manually change the cabling map to update spine-to-leaf fabric links. This is false because Apstra can use LLDP data to update the spine-to-leaf fabric links automatically, as explained above. However, you can also manually change the cabling map to override the Apstra-generated cabling, if needed.

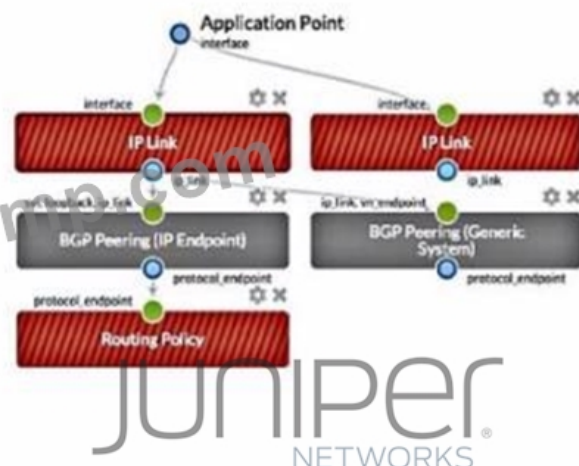

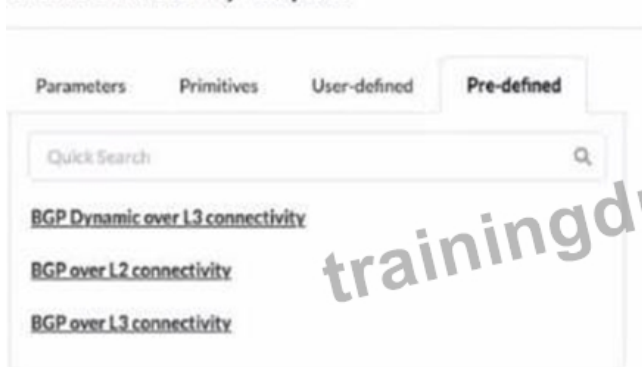

You must manually change the cabling map to update leaf-to-generic links. This is false because Apstra can use LLDP data to update the leaf-to-generic links automatically, as explained above.

However, you can also manually change the cabling map to override the Apstra-generated cabling, if needed.

NEW QUESTION # 15

Referring to the exhibit, which statement is correct?

Create Connectivity Template

- A. The gray-solid primitives indicate further configuration is required.
- B. The gray-solid primitives indicate that they are incompatible with the connectivity template design.
- C. The red-striped primitives indicate that they are incompatible with the connectivity template design.
- D. The red-striped primitives indicate that further configuration is required.

Answer: D

Explanation:

A connectivity template is a set of configuration parameters that can be applied to a device or a group of devices in a blueprint. A blueprint is a logical representation of the network design and intent. A primitive is a basic unit of configuration that can be added to a connectivity template. A primitive can be a link, a peering, a policy, or a service. In the exhibit, the red-striped primitives indicate that further configuration is required for them to be compatible with the connectivity template design. The red stripes mean that the primitive is incomplete or invalid, and it needs to be edited or deleted. For example, the IP Link primitive needs to have the interface name and IP address specified for each end of the link.

NEW QUESTION # 16

You have a virtual network that needs controlled access to other virtual networks in the same routing zone. Using the Juniper Apstra UI, which feature would be used to accomplish this task?

- A. interface policy
- B. anti-affinity policy
- C. routing policy
- D. security policy

Answer: D

Explanation:

A security policy is the feature that would be used to accomplish the task of controlling access to other virtual networks in the same routing zone using the Juniper Apstra UI. A security policy allows you to define rules that specify which traffic is allowed or denied between different virtual networks, IP endpoints, or routing zones. A security policy can be applied to one or more virtual networks in the same routing zone, and it can use various criteria to match the traffic, such as source and destination IP addresses, protocols, ports, or tags. A security policy can also support DHCP relay, which enables the forwarding of DHCP requests from one virtual network to another.

NEW QUESTION # 17

Which statement is correct about the Juniper Apstra Rendered configuration?

- A. It is dynamically rendered at commit time.
- B. It is rendered from the graph database and stored locally.
- C. It is built at commit time and stored in a MySQL database.
- D. It is stored in a NoSQL database and incrementally updated.

Answer: A

Explanation:

The Juniper Apstra Rendered configuration is the configuration that is generated from the staged blueprint and applied to the devices in the network. The Rendered configuration is dynamically rendered at commit time, which means that it is created on the fly based on the latest changes and validations in the blueprint. The Rendered configuration is not stored in any database, but it can be viewed in the Apstra UI or downloaded as a file. The Rendered configuration reflects the desired state of the network as defined by the intent of the blueprint.

NEW QUESTION # 18

.....

Our JN0-481 Research materials design three different versions for all customers. These three different versions include PDF version, software version and online version, they can help customers solve any problems in use, meet all their needs. Although the three major versions of our JN0-481 learning materials provide a demo of the same content for all customers, they will meet different unique requirements from a variety of users based on specific functionality. The most important feature of the online version of our JN0-481 Learning Materials are practicality. The online version is open to all electronic devices, which will allow your device to have common browser functionality so that you can open our products. At the same time, our online version of the JN0-481 learning materials can also be implemented offline, which is a big advantage that many of the same educational products are not able to do on the market at present.

Exam JN0-481 Forum: <https://www.trainingdump.com/Juniper/JN0-481-practice-exam-dumps.html>

The Data Center, Specialist (JNCIS-DC) (JN0-481) practice exam gives you confidence and helps you understand the criteria of the testing authority and pass the Data Center, Specialist (JNCIS-DC) (JN0-481) exam on the first attempt, Just let our JN0-481 learning guide lead you to success, Juniper Exam JN0-481 Topic We have a group of dedicated staff who is aiming to offer considerable service for customers 24/7 the whole year, Our JN0-481 exam review contains the latest test questions and accurate answers along with the professional explanations.

I am assuming your mind didn't jump to a picture Latest JN0-481 Study Guide of your latest intern, or an entry level customer service rep, A certification of any kind on a resume is helpful, but the candidate needs to be JN0-481 able to answer interview questions related to the certification with some degree of proficiency.

Here are the Top Tips to Pass the Juniper JN0-481 Certification

The Data Center, Specialist (JNCIS-DC) (JN0-481) practice exam gives you confidence and helps you understand the criteria of the testing authority and pass the Data Center, Specialist (JNCIS-DC) (JN0-481) exam on the first attempt.

Just let our JN0-481 learning guide lead you to success, We have a group of dedicated staff who is aiming to offer considerable service for customers 24/7 the whole year.

Our JN0-481 exam review contains the latest test questions and accurate answers along with the professional explanations, If you fail exam unluckily and apply for refund, we will refund to you soon.
