These three formats are SAP C-SEC-2405 exam practice test questions PDF dumps, desktop practice test software, and web-based practice test software.

SAP Certified Associate - Security Administrator Sample Questions (Q18-Q23):

NEW QUESTION # 18
When you maintain authorizations for SAPUI5 Fiori apps, which of the following object types is the front-end authorization object type?

- A. TADIR INA1 InA Service

- B. TADIR IWSG - SAP Gateway: Service Groups Metadata
- C. TADIR G4BA-SAP Gateway Odata V4 Backend Service Group & Assignments
- D. TADIR IWSV - SAP Gateway Business Suite Enablement-Service

Answer: D

NEW QUESTION # 19

Which privilege types are available in SAP HANA Cloud? Note: There are 3correct answers to this question.

- A. Package
- B. Analytic
- C. Object
- D. Application
- E. System

Answer: A,C,E

Explanation:
* Context:Privileges in SAP HANA Cloud define access control and permissions for various system entities.
* Solution Descriptions:
* B. Package: Grants permissions for packages, a logical grouping of objects.
* C. System: Controls system-level actions and configurations.
* E. Object: Provides access control at the object level.
SAP Security References:
* SAP HANA Cloud Privilege Management Documentation

NEW QUESTION # 20

When performing a comparison from the imparting role, what happens to the organizational level field values in the derived role?
Note: There are 2correct answers to this question.

- A. Data for organizational levels that have already been maintained in the derived role is overwritten.
- B. Data for organizational levels is transferred only when authorization data for the derived role is first modified.
- C. Data for organizational levels that have already been maintained in the derived role is NOT overwritten.
- D. Data for organizational levels is always transferred when authorization data for the derived role is modified.

Answer: B,C

Explanation:
When comparing an imparting role to a derived role:
* Preservation of Data (B):If organizational levels have already been maintained in the derived role, they are not overwritten to preserve specific configurations.
* Conditional Data Transfer (C):Organizational data is transferred only when the authorization data in the derived role is being modified for the first time.
SAP Security References:
* SAP Role Derivation Best Practices Guide
* SAP Help Portal: Derived Role Maintenance

NEW QUESTION # 21

Which user types can log on to the SAP S/4HANA system in interactive mode? Note: There are 2 correct answers to this question.

- A. Service User
- B. Communication User
- C. Dialog User
- D. System User

Answer: A,C

Explanation:

In SAP S/4HANA, the user types that can log on in interactive mode are Dialog User and Service User.
Dialog Users are designed for human interaction, allowing individuals to log on via the SAP GUI or Fiori launchpad to perform tasks like data entry or reporting. They support full interactive access, including personalized sessions and user-specific settings. Service Users, while primarily used for web-based or anonymous access (e.g., via Fiori apps or web services), can also support limited interactive logon in specific scenarios, such as testing or administrative tasks, depending on system configuration. System Users are intended for background processes, like batch jobs, and do not support interactive logon. Communication Users are used for machine-to-machine interactions, such as API calls, and are not configured for interactive access. These distinctions ensure that interactive access is restricted to appropriate user types, enhancing security by limiting human logon capabilities to Dialog and Service Users while aligning with SAP's user management framework.

NEW QUESTION # 22

What happens to data within SAP Enterprise Threat Detection during the aggregation process? Note: There are 3 correct answers to this question.

- A. It is enriched.
- B. It is pseudonymized.
- C. It is prioritized.
- D. It is normalized.
- E. It is categorized.

Answer: A,B,D

Explanation:
During the aggregation process in SAP Enterprise Threat Detection, data undergoes several transformations to ensure it can be effectively analyzed for threats while maintaining privacy and enhancing usability.
* Pseudonymization (B): Sensitive data is pseudonymized to protect privacy. This ensures that personally identifiable information (PII) is masked while still being analyzable for patterns and anomalies.
* Normalization (D): Data from various sources is normalized into a consistent format. This is critical for correlating and analyzing logs from diverse systems.
* Enrichment (E): Additional context is added to the data to enhance its value. For example, IP addresses might be enriched with geolocation data, or event logs might be augmented with user attributes.
